SERVICE MANUAL

Vol. 1 (1st Edition)

BETACAM SP TM

LITHIUM BATTERY

Replace the battery with a Sony CR2025 lithium battery. Use of another battery may present a risk of fire or explosion.

WARNING

Battery may explode if mistreated.
Do not recharge, disassemble or dispose of in fire.

Note

Keep the lithium battery out of the reach of children. Should the battery be swallowed, consult a doctor immediately.

ADVARSEL

Lithiumbatteri - Eksplosionsfare ved fejlagtig
håndtering.
Udskiftning må kun ske med batteri af samme
fabrikat og type.
Levér det brugte batteri tilbage til leverandøren.

ADVARSEL

Lithiumbatteri - Eksplosjonsfare.
Ved utskifting benyttes kun batteri som
anbefalt av apparatfabrikanten.
Brukt batteri returneres
apparatleverandøren.

VARNING

Explosionsfara vid felaktigt batteribyte.
Använd samma batterityp eller en likvärdig typ
som rekommenderas av apparattillverkaren.
Kassera använt batteri enligt gällande
föreskrifter.

VAROITUS

Paristo voi räjähtää jos se on virheellisesti asennettu.
Vaihda paristo ainoastaan laitevalmistajan
suosittelemaan tyyppiin.
Hävitä käytetty paristo valmistajan ohjeiden
mukaisesti.

The material contained in this manual consists of information that is the property of Sony Corporation and is intended solely for use by the purchasers of the equipment described in this manual.

Sony Corporation expressly prohibits the duplication of any portion of this manual or the use thereof for any purpose other than the operation or maintenance of the equipment described in this manual without the express written permission of Sony Corporation.

Le matériel contenu dans ce manuel consiste en informations qui sont la propriété de Sony Corporation et sont destinées exclusivement à l'usage des acquéreurs de l'équipement décrit dans ce manuel.

Sony Corporation interdit formellement la copie de quelque partie que ce soit de ce manuel ou son emploi pour tout autre but que des opérations ou entretiens de l'équipement à moins d'une permission écrite de Sony Corporation.

Das in dieser Anleitung enthaltene Material besteht aus Informationen, die Eigentum der Sony Corporation sind, und ausschließlich zum Gebrauch durch den Käufer der in dieser Anleitung beschriebenen Ausrüstung bestimmt sind.

Die Sony Corporation untersagt ausdrücklich die Vielfältigung jeglicher Teile dieser Anleitung oder den Gebrauch derselben für irgendeinen anderen Zweck als die Bedienung oder Wartung der in dieser Anleitung beschriebenen Ausrüstung ohne ausdrückliche schriftliche Erlaubnis der Sony Corporation.

Introducing this manual

This manual is the Service Manual Vol. 1 of the Portable Videocassette Recorder PVV-3/3P.

This manual contains the maintenance information of this equipment, and the information on services such as the replacement of the parts and the adjustments.

Contains

The sections covered in the manual are summarized below to give you a general understanding of the manual.

- Section 1 **OPERATING INSTRUCTION**
Describes the contents of the operation manual related to the operations of this equipment.
- Section 2 **SERVICE OVERVIEW**
Describes how to replace of the parts, the locations of the parts, switch setting, and error code on services.
- Section 3 **PERIODIC MAINTENANCE AND INSPECTION**
Describes the periodic check and cleaning procedure.
- Section 4 **REPLACEMENT OF MECHANICAL PARTS**
Describes how to replace the parts and how to adjust them after replacement.
- Section 5 **LINK SYSTEM ALIGNMENT**
Describes the adjustment procedures of link system.
- Section 6 **TAPE PATH ALIGNMENT**
Describes the adjustment procedures of tape path system.
- Section 7 **ELECTRICAL ALIGNMENT OVERVIEW**
Describes the general information for electrical adjustments.
- Section 8 **POWER SUPPLY AND SYSTEM CONTROL ALIGNMENT**
Describes the electrical adjustments of power supply and system control systems.
- Section 9 **SERVO ALIGNMENT**
Describes the electrical adjustments of servo system.
- Section 10 **AUDIO ALIGNMENT**
Describes the electrical adjustments of audio system.
- Section 11 **VIDEO ALIGNMENT**
Describes the electrical adjustments of video system.
- Section 12 **ELECTRICAL ALIGNMENT WITH REPLACEMENT OF MECHANICAL PARTS**
Describes the electrical adjustments with replacing the mechanical parts.

Related manuals

In addition to this Service Manual Vol. 1, the following manuals are provided.

- **Operation Manual (Supplied with equipment)**

Part No. 3-798-217-21 (English)

3-798-217-31 (French)

3-798-217-41 (Germany)

3-798-217-51 (Italian)

Describes how to operate this equipment.

- **Service Manual Vol. 2 (Not supplied with equipment)**

Part No. 9-977-613-21

Contains block diagrams, board layouts, schematic diagrams, semiconductor pin assignments and parts lists.

TABLE OF CONTENTS

Volume 1

1. OPERATING INSTRUCTION

2. SERVICE OVERVIEW

2-1. REMOVAL OF THE CABINET	2-1
2-2. LOCATION OF MAIN PARTS	2-2
2-2-1. Location of the Mechanical Main Parts/ Components	2-2
2-2-2. Location of the Printed Circuit Boards	2-3
2-3. PRINTED CIRCUIT BOARD	2-5
2-4. PRECAUTIONS ON TIGHTENING THE SCREWS	2-6
2-5. CONNECTION OF VTR AND CAMERA	2-7
2-6. USING THE UNIT WITHOUT THE CASSETTE TAPE	2-7
2-7. PUT THE VTR INTO THE REC MODE WITHOUT CONNECTING A CAMERA	2-8
2-8. TAKING UP SLACK IN THE CASSETTE TAPE	2-9
2-9. CLEANING WHEN HEADS ARE CLOGGED	2-11
2-10. RELEASING THE HUMID TIMER WHEN THE UNIT IS HUMIDIFIED	2-11
2-11. REMOVAL/INSTALLATION OF THE BOARDS	2-12

Purpose and audience

This manual contains operating instructions for the PVV-3/3P Pro-Betacam SP Portable Videocassette Recorder. It is addressed to a wide range of people, ranging from experienced users of professional portable VTRs to those who have not used this type of VTR before. To make the best use of the functions of the PVV-3/3P (called the "unit" in this manual), please read this book carefully.

Organization of this manual

- Chapter 1 Overview**
Discusses some of the functions and features of the system, and shows an example system configuration. This chapter should be read before operating the unit.
- Chapter 2 Location and Function of Parts**
Gives the name and function of controls and other parts of the unit.
- Chapter 3 Setting Up the Unit**
Describes the preparations for using the unit, including notes on operation, the mounting of the unit on a video camera, and connections required.
- Chapter 4 Operations**
Covers all aspects of operation of the unit, including the basic procedures for recording and playback, the indications which appear in the display window, and how to use the VTR menu.
- Chapter 5 Maintenance**
Describes the warning system, troubleshooting, and care of the unit.
- Appendix**
Specifications

Chapter 1 Overview

This chapter describes some of the functions and features of the unit, and shows an example system configuration.

Features	1-3
Example System Configuration	1-4

Features

The PVV-3/3P Portable Videocassette Recorder, featuring the quality of Sony's Betacam SP (Superior Performance) series, can be attached to a color video camera in the DXC-637/637P/537A/537AP/527A/527AP series for use as a combination camera/VTR (camcorder).
(You cannot attach this unit to video cameras in the DXC-325/325P/527/527P series because they are not compatible with component video signals.)

High-quality video and audio

- The Betacam SP format offers improved signal-to-noise ratio, better frequency response, and superior waveform and detail video recording/playback characteristics.
- The built-in Dolby C-type noise reduction¹⁾ system offers high signal-to-noise ratios and excellent upper-range audio recording.
- Metal tape allows the unit to take full advantage of the SP format, for high-quality pictures and low-distortion audio over a wide bandwidth.

Compact and lightweight

The unit is small and light enough to be carried by a camera operator alone.

Playback

- Monochrome playbacks of the videotape recording can be displayed in the camera's viewfinder.
- Color playbacks can be displayed on a color TV or color video monitor when you connect an optional VA-300/300P/500/500P Playback Adaptor to the unit.
- The quick recording review feature, which automatically rewinds and plays back the last few seconds of the recording, allows the camera operator to check the recording just after it is done.

Built-in time code generator

The time code generator/reader is built in, making it easy to record the time code (LTC²⁾ and VITC³⁾ required for precise editing.

- 1) Dolby noise reduction manufactured under license from Dolby Laboratories Licensing Corporation.
"DOLBY" and the double-D symbol  are trademarks of Dolby Laboratories Licensing Corporation.
- 2) LTC: Abbreviation of Longitudinal Time Code.
Time code recorded along the tape. A VTR cannot reproduce LTC when the tape stops to output a still picture. When the tape runs slowly, the output level of LTC is very low and readout is unreliable.
- 3) VITC: Abbreviation of Vertical Interval Time Code.
A time code inserted during the vertical blanking interval between two fields. Unlike LTC time codes, VITC time codes are stored in the same tracks as the video information, so they can be read out precisely even while the tape is not moving.

A wide selection of power sources

You can use the following power supplies. (The continuous recording times mentioned are for a camcorder consisting of this unit and a video camera in the DXC-637/637P series.)

- An NP-1B Battery Pack gives a continuous recording time of about 60 minutes.
- An optional DC-500 Battery Adaptor makes it possible to use a BP-90A Battery Pack, which gives a continuous recording time of about 140 minutes.
- An optional BKW-L601 Battery Adaptor makes it possible to use a BP-L60/L90 Battery Pack.
- An optional AC-550/550CE AC Adaptor makes it possible to operate the unit on AC power.

Frame-accurate continuous recording

After recording one shot, it is possible to resume recording precisely at the next frame, simply by pressing the VTR button on the camera or lens. The same precision is available even after the cassette has been ejected and reinserted, using the unit's quick recording review function.

Compatibility with other Betacam SP VTRs

Metal tape cassettes recorded with this unit can be played back on any Betacam SP VTR, and a metal tape cassette recorded with any Betacam SP VTR can be played back on this unit.

VTR information displayed in the viewfinder

Information on the state of this unit can be displayed in the viewfinder of the video camera.

Note

Depending on the video camera model, this feature may not be available.

Example System Configuration

This unit can be attached to a color video camera in the DXC-637/637P/537A/537AP/327A/327AP series to make up a combination camera/VTR. The diagram below shows an example camera/VTR system configuration in which the camera is a DXC-637K or DXC-637PK depending on whether the VTR is an PVV-3 or PVV-3P.

1-4 Chapter 1 Overview

Chapter 2 Location and Function of Parts

This chapter describes the location and function of the parts of the unit which it is necessary to understand before operating the unit.

Power Supply and Display	2-2
Shoulder Strap Fitting and Input/Output Connectors	2-3
Recording/Play back Functions	2-4
Time Code Functions	2-5

Power Supply and Display

Power supply

1 Battery case

Insert an NP-1B Battery Pack (not supplied).
For details of the battery loading procedure, see the section "Using the NP-1B Battery Pack" (page 3-10).

2 +48V (CH-1/CH-2) switches

These switches control the 48V power supply to the CH-1/CH-2 (+48V) connectors. When one of these switches is on, the corresponding one of the AUDIO IN (CH-1/CH-2) switches should be set to MIC, and the corresponding connector can be used for a microphone requiring a 48V supply.

Note

If you connect a microphone not compatible with a 48V supply to one of the CH-1/CH-2 (+48V) connectors while the corresponding one of the +48V (CH-1/CH-2) switches is in the ON position, the microphone may be damaged. Check the power supply used by the microphone and the switch settings before making the connection.

3 POWER switch

This powers the unit on and off.
When recording with this unit attached to a video camera, set the POWER switch on the camera to ON also.
The camera POWER switch is disabled when this switch is set to OFF.

4 DC IN connector (XLR 4-pin, male)

Use a CMA-8A/8ACE camera adaptor or AC-550/550CE AC Adaptor to supply power from an AC outlet to this connector.

Display

5 LIGHT switch

This turns the display window lighting on or off.

6 WARNING indicator

This lights or flashes when there is an operating problem with the unit.
For details, see the section "Warning System" (page 5-3).

7 Display window

This displays time values, audio levels, tape remaining, battery state, non-drop-frame (NDF) indication (for NTSC only), warnings, and head drum operating hours.
For details, see the section "Indications in the Display Window" (page 4-10).

8 BACK TALLY switch

This switch determines whether or not the BACK TALLY indicator operates.

9 MENU button

Use this button to access the VTR menu, for settings such as date and time, and drop-frame or non-drop-frame (for NTSC only).
For details see the section "Using the VTR Menu" (page 4-20).

10 BACK TALLY indicator (red)

This lights during recording with the BACK TALLY switch set to ON.
This indicator also flashes to indicate warnings in the same manner as the REC/TALLY indicator in the viewfinder of the video camera.
For details about the warning functions of the REC/TALLY indicator, see the section "Warning System" (page 5-2).

Shoulder Strap Fitting and Input/Output Connectors

Shoulder strap fitting and input/output connectors

- 1 Shoulder strap fitting**
Use this to attach the supplied shoulder strap.
- 2 Camera connector (50-pin)**
Connect the 50-pin connector (for VTR connection) of a video camera in the DXC-637/637P/537A/537AP/327A/327AP series.
- 3 VIDEO OUT connector (BNC)**
This outputs the video signal from the camera.

Note

It is not possible to monitor video being played back or recorded by the built-in VTR using this connector.

- 4 REMOTE connector (mini-jack)**
Connect an RM-81 Remote Control Unit (not supplied). You can use the RM-81 instead of the VTR button on the video camera or lens to control starting and stopping of recording.

Note

Be careful not to confuse the REMOTE and EAR connectors, both of which are mini-jacks.

- 5 EAR connector (stereo mini-jack)**
Connect an earphone or headphones. This outputs the sound which was output to the speaker, but mutes the speaker.

- 6 CH-1/CH-2 (-48V) connectors (XLR 3-pin, female)**

Connect a microphone or external equipment to each of these connectors.
When using a signal input to either of these connectors, set the corresponding AUDIO IN (CH-1/CH-2) switch to MIC or LINE, depending on the equipment connected.

- 7 GEN LOCK VIDEO IN connector (BNC)**
When synchronizing the camera to an external signal, input a reference video signal (VBS¹⁾ or BS²⁾ from external equipment to this connector.

- 8 TC (time code) IN connector (BNC)**
Input an external signal for synchronizing the built-in time code generator output signal. Use an SMPTE (for NTSC/EBU) (for PAL) longitudinal time code (LTC) signal.

Note

Use a jitterless LTC signal. Using an LTC signal reproduced by other equipment may cause this unit to malfunction.

- 9 TC (time code) OUT connector (BNC)**
Outputs the time code signal from the built-in time code generator. When a signal is input to the TC IN connector, this output signal is synchronized to it.

- 10 PB (playback) ADAPTOR connector (round, 20-pin)**

For color playback monitoring from the built-in VTR, connect a VA-300/300P/500/500P Playback Adaptor (not supplied) to this connector.

Note

When this unit is loaded with a charged battery pack or connected to an AC power supply, power is supplied from this connector regardless of the setting of the POWER switch. Therefore, when not using the playback adaptor connected, make sure it is turned off.

Chapter 2

1) VBS: Video, Burst and Sync
2) BS: Burst and Sync

Recording/Playback Functions

Recording/Playback Functions

- 1 EJECT button**
Press this button to open the cassette holder.
- 2 Tape transport buttons and indicators**
These control the tape transport as follows.
REW ◀: Rewinds the tape. While the tape is being rewound, the indicator lights.
F FWD ▶▶: Fast forwards the tape. While the tape is being fast forwarded, the indicator lights.
PLAY ▶: Plays back the recorded video. During playback, the indicator lights.
STOP ■: Stops the tape.
- 3 MONITOR SELECT switch**
This selects the audio output to the speaker or earphones.
CH-1: channel 1 audio
MIX: channels 1 and 2 mixed
CH-2: channel 2 audio
- 4 AUDIO LEVEL (CH-1/CH-2) knob**
When the AUDIO SELECT (CH-1/CH-2) switches are set to MANUAL, these knobs adjust the audio recording levels on the corresponding channels.
The audio levels are shown in the display window. For details, see the section "Indications in the Display Window" (page 4-10).

Note

During recording, none of these buttons operates.

- 5 AUDIO SELECT (CH-1/CH-2) switches**
These select the audio level adjustment method for each of channels 1 and 2.
AUTO: Use the AGC circuit to adjust the audio level automatically.
MANUAL: Adjust the audio level manually, using the AUDIO LEVEL (CH-1/CH-2) knobs. There is a limiter circuit to prevent excess levels, thus allowing recording with low distortion.
- 6 AUDIO IN (CH-1/CH-2) switches**
These select the input signals to audio channels 1 and 2.
CAM: The signal from the microphone built into the camera or connected to the MIC IN (+48V) connector of the camera.
MIC: The signal from a microphone connected to the CH-1/CH-2 (+48V) connectors.
LINE: The line signal connected to the CH-1/CH-2 (+48V) connectors.
- 7 CTD button**
This is for CTD¹⁾ playback. To check the color difference signals during playback, hold down this button. The R-Y and B-Y signals appear in monochrome on the left and right halves of the split screen.

Checking the color difference signals

- 1) CTD¹⁾**: Compressed Time Division Multiplex. Because the two color difference signals (R-Y and B-Y) have a much smaller bandwidth than the luminance signal, they can be compressed by a factor of two in time, and multiplexed into a single signal.

- 8 MONITOR knob**
This controls the volume of the sound other than the warning on the speaker or from the earphone. On the minimum setting, the sound is not audible at all.
- 9 ALARM knob**
This controls the volume of the warning sound given on the speaker or from the earphone. On the minimum setting, the warning sound is not audible at all.
- 10 Speaker**
During recording the speaker relays the input audio signal in E-E mode²⁾, and during playback it outputs the playback audio. The speaker also sounds a warning tone when there is an error indication in the viewfinder or display window. If an earphone is connected to the EAR connector, the speaker does not sound.
For details of the warning tone, see the section "Warning System" (page 5-2).

For details of the warning tone, see the section "Warning System" (page 5-2).

- 2) E-E mode**: Electric-to-Electric mode. The input signals which pass through the recorder's electronics are supplied from the output connectors.

Time Code Functions

Time code functions

PVV-3(UC)
PVV-3P(EK)

1 RESET/MENU SET button
This resets the time value shown in the display window. The effect of this button depends on the settings of the DISPLAY switch and TC mode switches 1 and 2, as shown in the following table.

Switch settings	RESET/MENU SET button when
DISPLAY: CTL	Resets the CTL count to "00:00:00.00".
DISPLAY: TC TC mode 1: PRESET TC mode 2: SET	Resets the time code value to "00:00:00.00".
DISPLAY: U-BIT TC mode 1: PRESET TC mode 2: SET	Resets the user bit value to "00 00 00".

a) User bits: A 32-bit section of time code in which a user can record necessary information.

This button is also used to change settings in the VTR menu.

For details of the VTR menu, see the section "Using the VTR Menu" (page 4-20).

2 DISPLAY switch
This selects the value to be shown in the time value indication in the display window.

CTL: Shows a count of the playback or recording CTL (control) signal pulses expressed in hours, minutes, seconds and frames.

TC: Shows the SMPTE (for NTSC)/EBU (for PAL) time code value.

U-BIT: Shows the user bit value within the SMPTE (for NTSC)/EBU (for PAL) time code. When you set this switch to TC or U-BIT, normally the LTC value appears in the display window, but it is also possible to display the information recorded in the VITC user bits (page 4-17).

For details of the display window indications, see the section "Indications in the Display Window" (page 4-10).

3 ADVANCE button
When setting time code and user bit values, pressing this button increments the digit selected with the SHIFT button.

4 SHIFT button
When setting time code and user bit values, press this button to select the digit to be incremented with the ADVANCE button.
The selected digit flashes.

For details of the method of setting time code and user bit values, see the sections "Setting the Time Code Value" (page 4-13) and "Setting the User Bit Value" (page 4-16), respectively.

5 TC (time code) mode switch 2
This switch determines the way in which time code values advance when TC mode switch 1 is set to PRESET.
F-RUN: Free-run mode. The time code advances continuously, whether or not the VTR is recording. Thus the time code value can be aligned with real time.
SET: Set the switch to this position to set the time code or user bit value.
R-RUN: The time code advances only during recording. Consecutive recordings on the tape have consecutive time code values.

Notes

In NTSC systems, there are two time code operation modes: drop-frame (DF) and non-drop-frame (NDF). The unit PVV-3 is shipped with drop-frame mode selected.

For details of how to select drop-frame or non-drop-frame mode, see the section "Selecting drop-frame/non-drop-frame mode (for NTSC only)" (page 4-22), and for the meanings of these modes, see the section "Drop-frame mode (for NTSC only)" (page 4-15).

6 TC (time code) mode switch 1
This switch determines whether the time code for a recording is made continuous from the previous recording on the tape, or starts afresh.

REGEN: Reads the existing time code on the tape, and sets the time code starting value accordingly. Thus, even when there is an indefinite break in recording, this setting ensures that time codes on the tape will be continuous. Regardless of the setting of TC mode switch 2, in this position the unit is always in R-RUN mode.

PRESET: Starts recording time code values on the tape from the currently set value.

DATE/TIME: This synchronizes the time code to the real time clock set in the VTR menu (page 4-20). In this case the time code is recorded in drop-frame mode (for NTSC only).

Chapter 3 Setting Up the Unit

This chapter describes the preparations for using the unit, including notes on operation, the mounting of the unit on a video camera, and connections required.

Notes on Operation	3-2
Safety Notes	3-2
Looking After the Unit	3-2
Condensation	3-3
Connecting Equipment	3-4
Mounting on Video Camera	3-4
Connecting a Wireless Microphone	3-5
Connecting Audio Line Signals	3-5
Fitting the Shoulder Strap	3-6
Attaching the Carry	3-7
Connecting a Remote Control Unit	3-9
Power Sources	3-10
Using the NP-10 Battery Pack	3-10
Using the BP-99A Battery Pack	3-12
Using the BP-150/150 Battery Pack	3-12
Using an AC Power Supply	3-12
Fitting/Replacing the Lithium Battery	3-13

Notes on Operation

Safety Notes

Power supply

The unit operates on a 12 V DC supply. Use only the specified power supplies (page 3-10).

Do not disassemble

The unit includes precision components: do not attempt to disassemble it, as this can lead to malfunction.

Foreign bodies

Be careful not to let any foreign bodies, especially metallic objects or water, get inside the unit, as this can lead to malfunction.

Looking After the Unit

Do not cover with cloth

While the unit is in operation, do not cover it with a cloth or other material. This can cause the temperature to rise, leading to a malfunction.

Use and storage locations

Avoid using or storing the unit in the following places:

- Where it is subject to extremes of temperature (outside 0 °C to 40 °C (32 °F to 104 °F)).
- Note that in summer the temperature in a car with the windows closed can reach 50 °C (122 °F).
- Very damp or dusty places.
- Where rain is likely to reach the unit.
- Places subject to severe vibration.
- Near strong magnetic fields such as radio or TV transmitters.

After use

Turn the POWER switch off.

When not used for a period of time

Remove the battery pack.

Shipping

When transporting the unit, as far as possible use either the optional carrying case or the original packing.

If shipping the unit as freight by truck, ship or airplane, pack it in the carrying case, then pack the carrying case in its own packing or similar.

Care

If the body of the unit is dirty, wipe it with a dry cloth. For severe dirt, use a soft cloth steeped in a small amount of neutral detergent, then wipe dry. Do not use volatile solvents such as alcohol or thinners, as these may damage the finish.

In the event of problems

Contact your local Sony service representative.

Condensation

If you move the unit suddenly from a very cold place to a warm place, or use it in a very humid location, condensation may form on the head drum. If the unit is operated in this state, the tape may adhere to the drum, and cause a failure or even permanent damage. Take the following steps to prevent this from happening:

- Remove the cassette before moving the unit from a very cold place to a warm place.

- Before inserting a cassette, turn the power on, and check that the HUMID indication is not showing in the display window. If it is showing, condensation is present: do not insert a cassette, and wait until the condensation has disappeared. At this point the condensation will evaporate more rapidly if you leave the unit powered on.

- If condensation occurs while a cassette is loaded, the unit stops operating. Press the EJECT button to remove the cassette, and wait until the HUMID indication disappears.

- Once condensation has occurred, it may take a considerable time before the unit can be operated. As far as possible, keep the unit in a place at normal temperature and low humidity.

For details of cassette insertion and removal, see the section "Inserting and Removing Cassettes" (page 4-3), and for details of the HUMID indication, see the section "Warning System" (page 5-2).

Connecting Equipment

Mounting on Video Camera

Use the following procedure to mount the unit on a video camera.

1 Fit the projection on the base of this unit into the slot in the camera's VTR mount.	 <p>Camera (e.g. DXC-657M/657PK) Projection on the base of the unit Guide groove in the camera's VTR mount Slot in the camera's VTR mount</p>
2 Slide this unit along the guide groove in the camera's VTR mount, and press firmly until fixed.	
3 Secure with two M4 x 12 screws (attached) near the camera's grip.	 <p>M4 x 12 screws</p>
4 Fix the camera's shoulder pad with two M4 x 6 screws (attached).	 <p>M4 x 6 screws</p>

Removing from camera
Follow the procedure above in reverse.

Connecting a Wireless Microphone

Using separately available components such as the WRT-810A/830A Wireless Microphone and WRR-810 UHF Portable Tuner, you can use a Sony wireless microphone system as an audio input source. To connect a WRR-810 to this unit, use the special case attached to the back of the unit, as shown in the following figure.

Connecting a wireless microphone system

For details of operation of the wireless microphone system, refer to the operating instructions supplied with the wireless microphone system.

Connecting Audio Line Signals

Connect an external audio line signal from a stereo amplifier or other equipment as shown in the following figure.

Connecting audio line signals

Connecting Equipment

Fitting the Shoulder Strap

To use the supplied shoulder strap for carrying the camcorder, use the following procedure to fasten it to the fitting points.

How to remove

Attaching the Grip

To attach the supplied grip, proceed as follows.

Connecting Equipment

Passing the video light cable through the grip

If you mount a video light on the video camera, you can use the following procedure to pass the power cable for the light through the grip.

<p>1 Remove the cover at the rear end of the grip.</p>	
<p>2 Remove the cover at the front end of the grip.</p>	
<p>3 Bend the front end of the cover removed in step 2 to break it off at the scored line.</p>	

Chapter 3

<p>4 Lay the video light power cable in the slot along the top of the grip.</p>	
<p>5 Ensuring that the power cable is neatly tucked into place in the slot without passing over the screw holes, replace the cover removed in step 2, and fasten with screws. (The rear cover removed in step 1 is not used.)</p>	

Chapter 3

Connecting a Remote Control Unit

By connecting an optional RM-81 Remote Control Unit to the REMOTE connector, you can start and stop recording by remote control.

Notes

- Always turn the unit off before connecting or disconnecting the remote control unit.
- Be careful not to confuse the REMOTE connector with the EAR connector on the right side of the unit.

For details of operation, refer to the operation manual supplied with the RM-81 Remote Control Unit.

Power Sources

This unit can operate from either a battery pack or an AC power supply.

Anton Bauer Magnum Battery System and Superlight System

Equipping the unit with a special battery mount developed by Anton Bauer Corporation enables you to use the Anton Bauer Magnum battery and the Anton Bauer Superlight System.

For details, contact an Anton Bauer dealer or your Sony service representative.

Using the NP-1B Battery Pack

Before use, always charge the battery pack with a BC-1WB/1WBCE Battery Charger.

Notes

- Do not allow metal objects to come into contact with the metal parts of the battery pack. **There is a danger of a short circuit.**
- When not using the unit for a considerable period, remove the battery pack.
- Immediately after use the battery pack is somewhat warm. It may not be possible to charge it fully while it is still warm.

To load the battery pack, proceed as follows.

1 Open the cover of the battery case.

2 Insert a fully-charged battery pack and close the battery case.

NP-1B Battery Pack operating time

The unit connected with a DXC-637/637P series video camera will operate for about 60 minutes of continuous recording using a fully-charged NP-1B Battery Pack at normal temperatures. Very low temperatures may reduce the operation time.

Using two NP-1B Battery Packs simultaneously

Use a DC-520 Battery Adaptor. In this case the continuous recording time is about 120 minutes (with a DXC-637/637P series video camera connected).

For more details, refer to the operation manual supplied with the DC-520.

NOTE

When using two NP-1B Battery Packs simultaneously, always replace the two battery packs at the same time. If you replace one only, the newly replaced battery pack may be subjected to an excessive load, resulting in the internal circuit breaker tripping.

Battery capacity indication

When the battery pack is almost exhausted, "BATT" in the display window flashes every second. At this point, replace with another fully-charged battery pack. If you continue to operate the unit without replacing the battery pack, "BATT" will start flashing four times a second and the unit will stop operating.

NOTE

Always power off the unit before replacing the battery pack.

Checking the battery level

When the POWER switch is on, the BATT indication in the display window shows the battery level. If the battery pack is fully charged, there are six marks visible between "P" and "F".

Checking the battery level with the BATT indication

For more details about the BATT indication, see the section "BATT capacity indication" (page 4-11).

Power Sources

Using the BP-90A Battery Pack

Using an optional DC-500 Battery Case, you can operate the unit from a BP-90A Battery Pack.
By using the battery pack as an internal power source, and an external battery (for example a BP-90A in a DC-210 Battery Adaptor) connected to the DC IN connector, you can use both battery packs together.
For more details, refer to the operation manual supplied with the DC-500.

BP-90A Battery Pack operating time
This unit connected with a DXC-637/637P series video camera will operate for about 140 minutes of continuous recording with a fully-charged BP-90A Battery Pack.

Using the BP-L60/L90 Battery Pack

Using an optional BKW-L601 Battery Adaptor, you can operate the unit from a BP-L60/L90 Battery Pack.
For more details, refer to the operation manual supplied with the BKW-L601.

Using an AC Power Supply

You can use an optional AC-550/550CE AC adaptor.
Notes:
• When a power supply is connected to the DC IN connector, the unit always switches from the internal battery pack to use the external power source.
• There may be some noise on the video signal at the instant the power supply is switched.

Fitting/Replacing the Lithium Battery

The lithium battery is needed to maintain some of the internal settings of the unit. When using the unit for the first time, be sure to fit the lithium battery (type CR2025) supplied with the unit. Using the unit without the lithium battery may result in faulty operation.
If the voltage of the lithium battery falls, a warning indication (L) appears in the display window. If this warning appears, replace the lithium battery within two or three days, using a type CR2025 button cell.
Use the following procedure to fit or replace the lithium battery.

Note
Read the instructions for the lithium battery carefully when fitting or exchanging the lithium battery. Mishandling of a lithium battery may result in an explosion.

<p>1 Turn the POWER switch on.</p>		<p>Push down, and pull out toward you.</p> 
<p>2 Press down the catch at the top of the battery cover, and pull toward you.</p>		<p>Push down, and pull out toward you.</p> 
<p>3 Take out the lithium button cell.</p>		<p>Push down, and pull out toward you.</p> 
<p>4 Reverse step 3 to insert a replacement lithium button cell. Take care that the positive side of the cell, marked with a plus sign is toward you.</p>		<p>Push down, and pull out toward you.</p> 
<p>5 Reclose the battery cover.</p>		<p>Push down, and pull out toward you.</p> 

Chapter 4 Operations

This chapter describes all aspects of operation of the unit, including the basic procedures for recording and playback, the indications which appear in the display window, and how to use the VTR menu.

Cassettes

Cassettes Used in This Unit

This unit uses S-size 1/2-inch Betacam SP metal tape cassettes. The type numbers of these tapes, with their recording times, are shown in the following table.

Type	Recording time (minutes)
BCT-5MA	5
BCT-10MA/UWWT-10MA	10 (NTSC)/11 (PAL)
BCT-20MA/UWWT-20MA	20 (NTSC)/23 (PAL)
BCT-30MA/UWWT-30MA	30 (NTSC)/35 (PAL)

CAUTION
If you insert an oxide tape such as a BCT-5G/10G/20G/30G tape, the unit ejects it automatically.

Notes on Using Cassettes

Preventing erasure

To protect recording on a tape, by preventing inadvertent erasure, do as follows.

Checking the tape for slack

Push in the reels with a finger and turn gently in the directions shown by arrows. If the reels will not move, there is no slack.

Inserting and Removing Cassettes

NOTE
When the cassette holder is open, the delicate internal mechanism, particularly the tape transport and drum, is exposed. Take care not to insert cassettes other than in the position illustrated below or to let any foreign bodies get in the tape compartment, as this can lead to damage to the mechanism.

Inserting a cassette

Inserting a cassette

- 1 Set the POWER switch of this unit to ON.
- 2 Press the EJECT button to open the cassette holder.
You can press the EJECT button even when the cover is closed.
- 3 Check the points below, then insert the cassette with the window outward.
 - When recording, the cassette must not have the record-inhibit plug pushed in.
 - There must be no slack in the tape.
- 4 Close the cassette holder by pressing the point marked "PUSH" on the cassette holder.

Removing the cassette

With the power supply on, press the EJECT button so that the cassette holder opens; then take out the cassette. Then close the cassette holder. The panel at the top of the cassette holder then comes down.

Basic Operations

This section describes the basic operations for recording and playback.

Recording

From powering on to loading a cassette

Powering on and loading a cassette

- 1 Load a fully charged battery pack.
- 2 Make the necessary connections to other equipment.
- 3 Turn the POWER switch on, and check that the HUMID indication has not appeared in the display window and that the BATT indication is not flashing.
 - If the HUMID indication is showing, wait until it disappears (page 5-2).
 - If the BATT indication is flashing, replace the battery pack with a fully charged one (page 5-2).
- 4 Press the EJECT button to open the cassette holder.
- 5 Load the cassette, after checking the points below, then close the cassette holder.
 - The cassette is not set to inhibit recording (page 4-2).
 - There is no slack in the tape (page 4-2).

From switching setting to end of recording

From switch setting to end of recording

- 1 After powering on this unit and the camera and inserting a cassette, set the switches of this unit as shown above.
- 2 Make necessary settings and adjustments on the camera.

For how to set and adjust the camera, refer to the camera's operation manual.
- 3 Press the VTR button on the camera body or lens.

Recording begins, and the REC/TALLY indicator in the camera's viewfinder lights.

The BACK TALLY indicator of this unit also lights, after flashing until recording begins.
- 4 To pause recording, press the VTR button once more.

The REC/TALLY indicator goes off and the unit pauses*.

(Continued)

- 1) Paused state: When the unit pauses, it enters either of the following two modes, standby-on or standby-off, depending on whether the POWER switch of the camera is set to ON STBY or OFF SAVE. In paused state, whether in standby-on or standby-off mode, you can use the continuous recording function.
- Standby-on mode (camera POWER switch set to ON STBY): The recorder is on standby, with the drum rotating and the tape held in tension by the pressure of the capstan and punch rollers. In this state, recording starts within about 0.3 second of pressing the VTR button.
 - Standby-off mode (camera POWER switch set to ON SAVE): Although the tape is wound round the drum, the drum is stationary and the capstan and punch roller pressure is not applied. It takes about 3 seconds to start recording after the VTR button is pressed.

Basic Operations

5 To end recording after pausing, press the STOP button. The unit enters standby-off mode. In this state, you cannot use the continuous recording function (see the section *Recording Continuity* below).

Notes

- During recording, the tape control buttons (EJECT, REW, F FWD, PLAY, and STOP on this unit and, REC REVIEW on the camera) have no effect.
- If you set the POWER switch of the camera to OFF during recording, this unit will stop recording, causing:
 - the WARNING indicator to light,
 - the warning tone to sound,
 - the REC/TALLY indicator in the viewfinder to flash.
- If you leave the unit in standby-on mode for eight minutes (you can change the period), then to protect the tape, the unit automatically releases the tape tension (standby-off mode).

To change the maximum period that the unit will stay in the paused state, see the section "Using the VTR Menu" (page 4-20).

Recording Continuity

As long as the camera POWER switch is in the ON STBY or ON SAVE position, pressing the camera or lens VTR button repeatedly to start and stop recording results in a continuous recording on the tape. Setting the POWER switch of the camera to ON SAVE reduces the power consumed by the camcorder, allowing you to use the same battery pack for longer periods. Compared with when the POWER switch is set to ON STBY, however, the unit will take a little longer before starting recording after the VTR button on the camera or lens is pressed.

To make the time code recorded on the tape also continuous, set the TC mode switches 1 and 2 to PRESET and R-RUN respectively. If, however, you do any of the following things during shooting, pressing the VTR button will not result in continuous recording.

- Eject the cassette
- Playback, fast forward, or rewind the tape
- Press the STOP button in the tape transport section.

Making a continuing recording on an already recorded tape

It is possible to record from an intermediate point on an already recorded tape. In this case, to make the time code also continuous, see the section "Making the time code continuous" (page 4-15).

Making a continuing recording on an already recorded tape

- 1 Press the PLAY button, and watch the playback in the viewfinder.
- 2 At the point from which you wish to continue recording, press the STOP button.
- 3 Press the REC REVIEW button on the camera body. This cues up the tape to the point at which you pressed the STOP button.
- 4 Press the camera or lens VTR button to begin recording.

Notes

If you turn the POWER switch off during recording, or when recording is paused, the unit automatically goes through its shut-down sequence, then powers off. When you next turn the POWER switch on, the unit automatically finds the point at which recording ended, and sets itself up so that you can carry on with continuous recording. Note that this operation takes several seconds; do not turn the POWER switch off or replace the battery during this interval, as the automatic recording continuity will be lost.

Note also that the recording continuity is lost in the following cases:

- If the POWER switch is turned on and off repeatedly.
- If the unit is left powered off for several hours.
- If the unit is subject to severe vibration while powered off.
- If for any other reason the automatic recording continuity function is unable to operate correctly.
- If the lithium battery (CR2025) is exhausted, or if no lithium battery has been fitted.

Basic Operations

Recording Review Function

The recording review function enables you to check the last few seconds of recording in the viewfinder.

Recording review function

With recording paused, press the REC REVIEW button on the camera body. Depending on how long you hold down the REC REVIEW button, the unit automatically rewinds the tape for between two and ten seconds before the pause, and plays back this section in monochrome in the viewfinder, also outputting the sound to the earphone or speaker. After the playback, the unit returns to the paused state.

Notes

- If during recording review you press the VTR button or the REC START/STOP button, on an RM-81, the recording review function is abandoned, and recording starts. In this case it is not possible to make the recording continuous from the previous recording.
- When the recording time before a pause is less than 1 second, you cannot use the recording review function.

Viewing Playbacks in the Viewfinder

Monochrome playback may be viewed through the camera's viewfinder.

Viewing playback in the viewfinder

- 1 Set the POWER switch of this unit to ON, and insert a cassette.
- 2 Press the PLAY button.
Monochrome playback appears in the camera's viewfinder.
Press the F FWD button for fast forward, and the REW button for rewind.
- 3 Press the STOP button to stop playback.

To check the color difference signals during playback
Hold down the CTDM button (page 2-7).

Basic Operations

Indications in the Display Window

The following indications appear in the display window.

1 2-field indication

This appears when the internal time code generator has color frame locking disabled.

2 External synchronization lock indication

This appears when the internal time code generator is locked to an external signal input to the TC IN connector.

3 Non-drop-frame indication (for NTSC only)

This appears when non-drop-frame mode is selected.

4 VITC data indication

This appears when VITC data is displayed.

5 Playback indication

This appears during playback, fast forward, or rewind with the time value indication showing a time code or user bit value.

6 Time value indication

Depending on the setting of the DISPLAY switch, this shows a counter value, time code value or user bit value.

7 Tape remaining indication

This shows the remaining tape time during recording or a pause in recording, as shown in the following table.

Indication	Tape time remaining
TAPE ■■■■■	25 minutes or more
TAPE ■■■■■	20 to 25 minutes
TAPE ■■■■■	15 to 20 minutes
TAPE ■■■■■	10 to 15 minutes
TAPE ■■■■■	5 to 10 minutes
TAPE ■■■■■	2 to 5 minutes
TAPE ■■■■■ (flashing)	0 to 2 minutes
TAPE ■■■■■ (flashing)	End of tape
No indication	No cassette loaded

8 Battery capacity indication

This shows the battery capacity as shown in the following table.

Indication	Battery voltage
BATT E ■■■■■	12.5 V or more
BATT E ■■■■■	12.0 V to 12.5 V
BATT E ■■■■■	11.75 V to 12.0 V
BATT E ■■■■■	11.5 V to 11.75 V
BATT E ■■■■■	11.3 V to 11.5 V
BATT E ■■■■■	11.25 V to 11.3 V
BATT E ■■■■■	11.0 V to 11.25 V
BATT E ■■■■■	11.0 V or less

a) Replace the battery pack when this indication appears.

9 Service indication

This appears during maintenance and special setting operations. It does not appear during normal operation.

10 Hold indication

This appears when the internal time code generator is stopped.

11 Lithium backup battery warning

This appears when the voltage of the internal lithium backup battery (CR2025) is low. If this indication appears, replace the lithium backup battery immediately.

For how to replace the lithium backup battery, see the section "Fitting/Replacing the Lithium Battery" (page 3-13).

12 Audio level indicators

These show the audio recording or playback levels. There are two indications, for channels 1 and 2 respectively.

13 Warning indications

These comprise the following indications.

RF: The video heads are clogged, or there is a fault in the recording system.

SERVO: Servo lock is lost.

HUMID: There is condensation on the drum.

SLACK: The tape cannot be wound properly.

Manual Audio Recording Level Adjustment

If the AUDIO SELECT (CH-1/CH-2) switches are in the AUTO position, the audio recording levels are controlled automatically. To control the audio levels manually, carry out the following procedure.
Do this after selecting the input signals for each of the audio channels using the AUDIO IN (CH-1/CH-2) switches.

Adjusting the audio recording levels

- 1 Set AUDIO SELECT switch for the channel or channels you wish to adjust manually to MANUAL.
- 2 Watching the audio level indicators in the display window, turn the AUDIO LEVEL knob or knobs for the channel or channels you wish to adjust so that the maximum audio level is about 0 dB.

Recording Time Values

This section describes how to set the resettable counter, the time code value, or the user bits included in the time code signal.

Setting the Counter

When the DISPLAY switch is set to CTL, the counter counts the pulses of the CTL signal on the tape, and displays the counter value on the viewfinder screen and in the display window, converted to hours, minutes, seconds and frames. The counter value is not, however, displayed in the viewfinder during playback.

For more information about the time value indication in the viewfinder, refer to the operation manual supplied with the camera.

Notes

Depending on the video camera model, the viewfinder time value display function may not be available.

Use the following procedure to set the counter value.

Setting the counter value

- 1 Set the DISPLAY switch to CTL.
The counter value appears in the display window.
- 2 Press the RESET(MENU SET) button.
This resets the value displayed in the viewfinder and display window to "0:00:00:00". The counter then advances recording proceeds, counting hours, minutes, seconds and frames.

If you rewind the tape after pressing the RESET(MENU SET) button
The value turns negative, showing a minus sign.

Setting the Time Code Value

If you are using both time code and user bit values, it is recommended to set the user bit value first.

The time code value can be set anywhere in the range from 00:00:00:00 to 23:59:59:29 (NTSC) or 23:59:59:24 (PAL).

For details of the user bit setting, see the section "Setting the User Bit Value" (page 4-16).

Recording Time Values

Note

This unit uses SMPTE (NTSC/JBU (PAL)) time code for both recording and playback. It is not compatible with other types of time code. Normally, the LTC data and the VITC data recorded in this unit are identical.

Setting the time code value

- 1 Set the DISPLAY switch to TC.
- 2 Set TC mode switch 1 to PRESET.
- 3 Set TC mode switch 2 to SET.
- 4 Use the SHIFT button to select the digits to set, and the ADVANCE button to change the value, until the required time code value is displayed.
- 5 If necessary (NTSC only), select the frame mode (DF/NDF).
*For details of the frame mode selection, see the section "Selecting drop-frame/non-drop-frame mode (for NTSC only)" (page 4-22).
For an explanation of drop-frame and non-drop-frame modes, see the section "Drop-frame mode (for NTSC only)" (page 4-15).*
- 6 Set TC mode switch 2 to the time code running mode as shown in the following table.

Mode	TC mode switch 2 setting	Effect
Free run: The time code value advances continuously whether recording or not.	F-RUN	The time code value starts advancing immediately.
Record run: The time code value advances only while recording.	R-RUN	The time code value starts advancing when you start recording, and stops between recording sessions.

Resetting the time code value

In step 4 of the procedure above for setting the time code, press the RESET/ (MENU SET) button. This resets the displayed time code to "00:00:00:00", and this value flashes.

Caution

If TC mode switch 1 is set to REGEN or DATE/TIME, it is not possible to reset the time code value.

Drop-frame mode (for NTSC only)

In the NTSC standard, the time code value is based on 30 frames per second, but the exact video frame frequency is in fact 29.97 frames per second. There is thus a 0.1% discrepancy between the time counted at 30 frames per second and the real time, or 18 frames per 10 minutes.

Drop-frame mode corrects for this by skipping two frame counts at the beginning of every minute which is not a multiple of ten.

For example:

In non-drop-frame mode, however, no frame counts are omitted, and there is a gradual deviation of the time code time from real time.

Making the time code continuous

In recording-run mode (when TC mode switch 2 is set to R-RUN), recording a number of scenes on the tape normally produces continuous time codes. If, however, you take the cassette out at some point, the time code will no longer be continuous.

- 1 Set TC mode switch 1 to REGEN.
- 2 Use the tape transport buttons to play back.
- 3 Watching the playback on the monitor, find the end point of the previous recording on the tape from which you wish to continue recording, and press the STOP button.
The tape stops.
- 4 Press the RBC REVIEW button of the camera.
This reads the end of the previous recording, and synchronizes the internal time code generator, thus allowing the new time code recorded to follow on consecutively.

Recording Time Values

Setting the User Bit Value

You can use the user bits to record any identifying code number on the time code track on the tape: this may be the date, time or scene number, for example. User bit values are always expressed as eight-digit hexadecimal values (base 16).

- 1 Set the DISPLAY switch to U-BIT.
- 2 Set TC mode switch 1 to PRESET.
- 3 Set TC mode switch 2 to SET.
- 4 Use the SHIFT button to select the digits to set, and the ADVANCE button to change the value, until the required user bit value is displayed.

Indications of hexadecimal digits A to F (10 to 15) on the display.

USER BIT	A	B	C	D	E	F
123456	A	b	c	d	e	f

- 5 Set TC mode switch 2 to F-RUN (free-run) or R-RUN (record-run).

Resetting the user bit value

In step 4 of the procedure above, press the RESET(MENU SET) button. This resets the displayed user bit value to "00 00 00 00".

Setting the time code to the real time clock and calendar

Set TC mode switch 1 to DATE/TIME. This synchronizes the time code generator to real time (recorded in the user bits) and date (recorded as time code), using the real time clock and calendar set in the VTR menu. Once you set this switch to the DATE/TIME position, it is not possible to retrieve the previous value (user bits and time code) in the time code generator.

For how to set the real time clock and calendar, see the section "Setting the Real Time Clock and Calendar" (page 4-21).

Recording the real time in the VITC user bits

Set VTR menu 209 to ON. The real time is recorded in the VITC user bits. You can carry out this operation even when TC mode switch 1 is set to DATE/TIME.

For how to set VTR menu 209, see the section "Setting the Real Time Recording Function (for the VITC User Bits)" (page 4-23). For how to set the real time, see the section "Setting the Real Time Clock and Calendar" (page 4-21).

Displaying the VITC User Bits

When the DISPLAY switch is set to U-BIT, the LTC user bits are displayed in the time value indication in the display window. It is also possible, however, to display the information recorded in the VITC user bits.

To display the VITC user bits, set the TC mode switch 2 to R-RUN or F-RUN and hold down the SHIFT button while the unit is recording, paused during recording, or completely stopped.

While the SHIFT button is held down, the LTC data displayed in the display window is replaced by the information recorded in the VITC user bits. The LTC and VITC time code values recorded in this unit are identical.

Displaying the real time recorded in the VITC user bits

When you record the real time in the VITC user bits (page 4-16), you can display the real time in the display window.

To display the real time recorded in the VITC user bits, set VTR menu 209 to ON, then carry out the procedure described in the above section "Displaying the VITC User Bits".

While the SHIFT button is held down, the real time recorded in the VITC user bits appears in the display window.

External Synchronization

This section describes the procedures involved in external synchronization of the camcorder, when using two or more camcorders synchronized for operation with a special effects unit, for example.

Synchronizing video and time code signals with an external signal

Connect the external reference video and time code signals as shown in the following figure.

Connecting external reference video and time code signals

External Synchronization

Synchronizing two or more camcorders

Phase alignment of the time code signals

- 1 Turn this unit and the camera on.
- 2 Set TC mode switch 1 to PRESET and TC mode switch 2 to F-RUN.
- 3 Set the DISPLAY switch to TC.

In this state, when you supply external video and time code reference signals, the internal time code generator locks on to the external time code signal. When the indication EXT-LK appears in the display window, the internal time code is synchronized with the external time code, and you can disconnect the external time code signal. Within the limits of accuracy, the internal time code generator will continue advancing the time code value in synchronization with the external equipment.

Notes

- After synchronizing with the external signal, wait a few seconds while the internal synchronizing circuits stabilize before beginning recording.
- The external synchronization affects only the time code values. It is not possible to synchronize the user bit values.
- When the time code generator is operating in F-RUN mode, turning the POWER switch of this unit or the camera off and on may degrade the phase alignment accuracy.
- If you change the TC mode switch settings made in the above procedure, the time code stops advancing. As a result, the time code synchronization is lost and the indication EXT-LK in the display window disappears.
- Color frame locking is not possible while the internal time code generator is locked on to the external time code signal.

Color Playback

To monitor color playback video with this unit, connect a VA-300/300P/500/500P Playback Adaptor (not supplied) to the unit, and a television or color monitor to the VA-300/300P/500/500P as shown in the following figure, and press the PLAY button.

Notes

- If you use the recording review function with the playback adaptor connected, the output signals to the playback adaptor are the same as the output signals to the viewfinder video and audio monitor.
- The playback adaptor output signals switch to E-E mode video and audio when the unit begins recording, or is completely stopped.
- When using a VA-300/500P for playback, ensure that the switches below the AUDIO LEVEL CH-3 and CH-4 adjustment knobs on the VA-500/500P are off.
- When using a playback adaptor with a video monitor or other monitoring equipment connected to the VIDEO OUT connector of this unit, set the 75Ω switch of the playback adaptor to OFF.

Using the VTR Menu

The VTR menu provides the following functions.

Function	Menu number	See page
Real time clock and calendar settings	101	4-21
Cumulative hours counts: • Head drum operating hours • Tape transport operation hours • Operating hours (total with power on)	201	4-22
NTSC drop-frame/non-drop-frame mode	204	4-22
Anton Bauer Magnum battery capacity indication setting	206	— ^{a)}
Standby period setting	207	4-22
VTRC insertion line setting	208	4-23
Real time recording function setting (for VTRC user files)	209	4-23

a) Normally, leave menu 206 set to OFF.

(In the following description, an underscore indicates a portion of the display which is flashing.)

Basic procedure for settings in the VTR menu

Basic procedure for settings in the VTR menu

- Press the MENU button.
The "DIAG" indication appears in the display window, and the time value indication shows "101 1994". ("1994" is the factory default.)
- Press the ADVANCE button to change the leading three-digit number in the time value indication to the required menu number.

Setting the Real Time Clock and Calendar

- Select menu number 101, and press the SHIFT button.
The current date setting appears as an eight-digit number in the setting mode format (YYMMDD). For example, "19940825" is August 25, 1994.

NOTE

It is not possible to change the first two digits of the year.

- Use the SHIFT and ADVANCE buttons to obtain today's date.
Ending the setting
Press the RESET/MENU SET button, then the MENU button, to exit the VTR menu.
The date set appears in the mmddyyyy format for NTSC versions (e.g. August 25, 1994 is displayed as "08251994") or in the ddmmyyyy format for PAL versions (e.g. August 25, 1994 is displayed as "25081994").

Continuing to set the time

Proceed to step 3.

- With the day display flashing in the setting mode format, press the SHIFT button.
The current time setting appears as a six-digit number, in 24-hour representation (hhmmss). For example, "221505" is 22:15 and 5 seconds.
- Use the SHIFT and ADVANCE buttons to obtain the current time.

- Press the RESET/MENU SET button, then the MENU button.
This exits the VTR menu.
The real time clock starts advancing from the setting at the point when you press the RESET/MENU SET button.
The date set appears in the mmddyyyy format for NTSC versions or in the ddmmyyyy format for PAL versions as described in step 2 above.

Using the VTR Menu

Displaying the Head Drum/Tape Transport/Total Operation Hours

- 1 Select menu number 201, and press the SHIFT button.
Pressing the SHIFT button cycles through the following displays:
 - Head drum operating hours (e.g. "A 0402H")
 - Tape transport operation hours (e.g. "b 0720H")
 - Total operating hours (e.g. "C 0835H")
 - Menu number indication (e.g. "201 0492")
- 2 After checking the displays, press the SHIFT or RESET/MENU SET button.
The menu number appears again.
- 3 Press the MENU button.
This exits the VTR menu.

Selecting Drop-Frame/Non-Drop-Frame Mode (for NTSC Only)

- 1 Select menu number 204.
The current setting appears beside the menu number (e.g. "204 dF").
dF: drop-frame mode (factory default)
ndF: non-drop-frame mode
- 2 Press the SHIFT button to make the frame mode indication flash (e.g. "204 dF"), then press the ADVANCE button.
This toggles the mode between "dF" and "ndF".
- 3 Press the RESET/MENU SET button, then the MENU button.
This exits the VTR menu.
The new setting is saved when you press the RESET/MENU SET button.

Setting the Standby Period

- The standby period is the maximum length of time (in minutes) that the unit will remain in the paused state before automatically removing the tape tension.
- 1 Select menu number 207.
The current setting appears beside the menu number (e.g. "207 08").

- 2 Press the SHIFT button to make the minute count flash (e.g. "207 08"), then press the ADVANCE button.
Pressing the ADVANCE button cycles through the possible settings:
08 (factory default) → 01 → 03 → 05
- 3 Press the RESET/MENU SET button, then the MENU button, to exit the VTR menu.
The new setting is saved when you press the RESET/MENU SET button.

Setting the VITC Insertion Lines

- 1 Select menu number 208.
The current setting appears beside the menu number (e.g. when lines 16 and 18 are currently set, "208 1618").
- 2 Press the SHIFT button to make the line number to be changed flash (e.g. "208 1618"), then press the ADVANCE button until the desired line number is displayed.
Pressing the ADVANCE button cycles through the possible settings in the range of 12-19 (NTSC)/9-22 (PAL).
If you wish to change the other VITC insertion line, too, repeat this step. You may set any two VITC insertion lines which are not adjacent to each other.
- 3 Press the RESET/MENU SET button, then the MENU button.
This exits the VTR menu.
The new setting is saved when you press the RESET/MENU SET button.

Setting the Real Time Recording Function (for the VITC User Bits)

The real time recording function allows you to record the real time on the VITC user bits.

- 1 Select menu number 209.
The current setting appears beside the menu number (e.g. "209 OFF").
- 2 Press the SHIFT button to make the current setting flash (e.g. "209 OFF"), then press the ADVANCE button to display the desired setting.
Pressing the ADVANCE button toggles the setting between ON and OFF.
- 3 Press the RESET/MENU SET button, then the MENU button.
This exits the VTR menu.
The new setting is saved when you press the RESET/MENU SET button.

Chapter 5 Maintenance

Warning System	5-2
Troubleshooting	5-3
Care of the Unit	5-4

Warning System

When the unit is powered on, or if a fault occurs during operation, a warning is given in the following ways:

- By the warning indicators in the viewfinder. (Depending on the video camera model, this feature may not be available.)
- By warning indications in the display window.
- By means of the WARNING indicator together with a warning tone from the speaker or earphone.

You can adjust the volume of the warning tone with the ALARM knob. When this knob is turned to the minimum position, there is no sound output at all.

Operation warnings and action to be taken

Warning indicator		VCR (PVW-200)		Warning tone		Troubleshooting		Problem	Service action	What to do
		1. Servo malfunction	2. Servo malfunction	Continuous beeping sound	Continuous beeping sound	1. Servo malfunction	2. Servo malfunction			
RF	Flashing (1 flash)							Video head gaps clogged or problem in recording circuit.	After detecting head clogging, recording continues but quality is poor.	Clean the heads. If the problem persists, power off, and consult your Sony service representative.
	Continuous ^{a)}							Servo lock lev.	Recording continues but quality is poor. The warning indicator may sometimes flash for a short time at the beginning of recording.	Power off, and consult your Sony service representative.
SERVO	Flashing (1 flash)									
HUMID	Continuous							Condensation on head drum.	The unit stops, and all operations are inhibited except eject.	Without powering off, wait until the HUMID indicator disappears.
SLACK	Continuous							The tape cannot be wound properly.	Operation stops.	Consult your Sony service representative.
TAPE	Flashing ^{a)} (1 flash)							Close to the end of tape.	Operation continuous.	Replace the cassette as soon as possible.
	Flashing (4 flashes)							End of tape.	Recording playback or fast forward stops.	Replace the cassette or rewind.
	Flashing (1 flash)								Battery almost exhausted.	Operation continues.
BATT	Flashing (4 flashes)							Battery exhausted.	Operation stops.	Replace the battery.

a) During recording or a recording paused state ("standby on") only.
b) Except during playback, fast forward, rewinding and recording review.
For details of error messages displayed in the viewfinder, refer to the operation manual supplied with the camera.

Troubleshooting

You can use this chart to establish possible causes of an apparent problem; always double-check before sending the unit for repair. If a problem persists, contact your Sony service representative.

Troubleshooting chart

Problem	Cause	Remedy
The tape transport does not operate when you press either VTR button.	• There is no battery pack loaded. • The battery pack has reached the end of its usable life. • The AC power adaptor is not connected, or it is not turned on.	• Load a battery pack (page 3-10). • Replace the battery pack with a fully charged one (page 3-10). • Connect the AC power adaptor, or turn it on (page 3-12).
The tape transport does not operate when you press any tape transport button.	• The POWER switch of the camera or VTR is turned off. • The VTR has reached the end of tape. • The cassette has the record-inhibit plug pushed in.	• Turn the POWER switches of the camera and VTR on (page 2-2). • Rewind the tape, or load a new cassette (page 4-3). • Either load a new cassette, or pull the record-inhibit plug out (page 4-2).
The video and audio E-E output is not present.	The VTR has reached the end of tape.	Either rewind the tape, or load a new cassette (page 4-3).
The power supply cuts while operating.	The POWER switch is turned off.	Turn the POWER switch on (page 2-2).
The battery goes dead very quickly.	The battery pack is exhausted.	Replace the battery pack with a fully charged one (page 3-10).
It is not possible to eject the cassette.	• The operating temperature is very low. • The battery pack is inadequately charged. • The battery pack is exhausted. • The POWER switch is turned off.	• Recharge the battery pack, or replace with a new fully charged battery pack (page 3-10). • Replace the battery pack with a fully charged one (page 3-10). • Turn the POWER switch on (page 2-2).
The playback picture quality is poor.	The video heads are dirty.	Clear the video heads using a BCT-SCLN cleaning cassette (page 5-4).
All controls except the EJECT button are disabled.	There is condensation on the head drum.	Remove the cassette, power off, and wait until the condensation has evaporated (page 3-3).
Audio recording is not possible.	The AUDIO LEVEL (CH-1/CH-2) knobs are set to the minimum level.	Adjust the setting of the AUDIO LEVEL (CH-1/CH-2) knobs (page 4-12).
The recorded sound is distorted.	The audio level is too high.	Adjust the setting of the AUDIO LEVEL (CH-1/CH-2) knobs, and record again (page 4-12).
The recorded sound has a high noise level.	The audio level is too low.	Adjust the setting of the AUDIO LEVEL (CH-1/CH-2) knobs, and record again (page 4-12).

Care of the Unit

Cleaning the video heads

Always use the special-purpose Sony BCT-5CLN Cleaning Cassette for cleaning the audio and video heads. Follow the instructions with the cleaning cassette carefully, as inappropriate use of the cleaning cassette can damage the heads.

Replacing the video heads

If cleaning the video heads fails to restore picture quality, the heads may be due for replacement.

Keep a check of the hours of head drum operation: with normal use, the heads should need replacing after about 500 hours of use.

When the heads need replacement, contact your supplier or Sony service representative.

You can check the head drum operating hours using the VTR menu. For details see the section "Using the VTR Menu" (page 4-20).

Replacing other parts

For replacement of all parts other than the video heads, contact your supplier or Sony service representative.

Chapter 5

Appendix

Specifications

1-3

Specifications

General

Power supply voltage 12 V DC \pm 1 V
AC-550/550CE AC Adaptor is usable.
Power consumption 10 W
Continuous recording time About 60 minutes (using NP-1B Battery Pack and with a DXC-637K/637PK Video Camera connected)
Operating temperature 0 °C to 40 °C (32 °F to 104 °F)
Operating humidity 25% to 85% (cannot be used when condensation present)
Storage temperature -20 °C to +60 °C (-4 °F to 140 °F)
Mass About 2.8 kg (6 lb 2 oz) (About 3.7 kg (8 lb 2 oz) including NP-1B Battery Pack, and BCT-30MA Cassette Tape)
External dimensions in mm (inches)

Tape transport system

Tape speed NTSC: Approximately 118.6 mm/s
PAL: Approximately 101.5 mm/s
Recording/playback time Using BCT-30MA/UVWVT-30MA
NTSC: More than 30 minutes
PAL: More than 35 minutes
Fast forward time Maximum 7.5 minutes (using BCT-30MA/UVWVT-30MA)
Rewind time Maximum 5.5 minutes (using BCT-30MA/UVWVT-30MA)
Cassette tapes used Betacam SP 1/2-inch metal tape BCT-5MA/10MA/20MA/30MA, UYWVT-10MA/20MA/30MA or equivalent

Video system

Recording system
Luminance: Frequency modulation
Color difference: Time division time compression FM
Peak-to-peak luminance NTSC: 30 Hz to 4.5 MHz \pm 0.5 dB
PAL: 25 Hz to 5.5 MHz \pm 0.5 dB
Peak-to-peak color difference NTSC: 30 Hz to 1.5 MHz \pm 0.5 dB
PAL: 25 Hz to 2.0 MHz \pm 0.5 dB
S/N ratio NTSC: At least 51 dB
PAL: At least 48 dB
Color difference At least 48 dB
2° Audio (RT value) 2% or less
VCR delay 20 ms or less

Audio system

Recording system
Fixed heads
Frequency characteristic 50 Hz to 15 kHz \pm 1.5 dB
S/N ratio (at 7% modulation level for NTSC; 10% for PAL) NTSC: 72 dB or more, PAL: 62 dB or more
S/N ratio (at 10% modulation level) NTSC: 62 dB or more, PAL: 52 dB or more
Distortion (THD) (5 kHz reference level) 1.5% or less
Noise and flutter 0.15% rms or less
a) Peak level: +8 dB above operational level

Inputs and outputs

Input connectors
CH-1(+48V) / CH-2(+48V) (XLR 3-pin, \times 2)
-60 dBu, 3 k Ω / +4 dB, 10 k Ω (0 dBu: 0.775 Vrms)
GEN LOCK VIDEO IN (BNC)
1.0 Vp-p, 75 Ω
TC IN (BNC)
0.5 to 18 Vp-p, 10 k Ω
DC IN (XLR 4-pin, male)
Camera connector
Luminance: 1.0 Vp-p, 1 k Ω
Chroma (B-Y, R-Y): 0.7 (NTSC)/0.7 (PAL) Vp-p, 1 k Ω

Specifications

Output connectors
VIDEO OUT (BNC) 1.0 Vp-p, 75 Ω
TC OUT (BNC) 1.0 Vp-p, 75 Ω
EAR (stereo mini-jack) $-\infty$ to -20 dBu variable, 8 Ω
PB ADAPTOR (round, 20-pin)
Remote control connector (for RM-81)
REMOTE (mini-jack) Recording trigger input, tally LED output

Supplied accessories

Shoulder strap (1)
Grip (1)
Lithium button cell (type CR2025) (1)
M4 x 6 screws (2)
M4 x 12 screws (2)
Operation manual (1)

Design and specifications are subject to change without notice.

SECTION 2 SERVICE OVERVIEW

2-1. REMOVAL OF THE CABINET

Cassette-up Compartment Lid

1. Loosen four screws, then open the cassette-up compartment lid.
(These screws are retained on the cassette-up compartment lid, so they are not out of it.)
2. Remove the screw (B2.6 × 5) of the flexible holder shown in the figure.
3. Disconnect the flexible card wire (CN1), and the flat cable (CN2) of the AU-185/185P board, then remove the cassette-up compartment lid.

Left Side Panel

1. Remove three screws (B 3 × 5), then remove the left side panel.

Front Panel

1. Remove two screws (B 3 × 5), then remove the front panel.

Right Side Panel

1. Loosen four screws, then open the right side panel.
(These screws are retained on the right side panel, so they are not out of it.)
2. Disconnect the two flat cables (CN1, CN2) and four connectors (CN3, CN4, CN5, CN6) of the VO-46B/46C board. (refer to section 2-11-10.)
3. Remove two screws (B2.6 × 5) of the VO-46B/46C board, then open the board. (refer to section 2-11-10.)
4. Disconnect the two flat cables (CN1, CN2), and five connectors (CN3, CN701B, CN101W, CN201R, CN702) of the TC-86B/86C board. (refer to section 2-11-10.)
5. Remove each screw (B2.6 × 5) of the strap, then remove the right side panel.

2-2. LOCATION OF MAIN PARTS

2-2-1. Location of the Mechanical Main Parts / Components

- | | | | |
|-------------------------------|--------------------------|---------------------------|-------------|
| ① Supply Side Main Brake | ⑪ Take-up Side Rail (O) | ⑳ Supply Side Soft Brake | ⑳ Slip Ring |
| ② Take-up Side Idler | ⑫ Take-up Side Rail (I) | ㉑ Supply Side Base | ㉒ Brush |
| ③ Gear | ⑬ Threading Gear | ㉒ Supply Side Sub-base | ㉓ CTL Head |
| ④ Take-up Side Main Brake | ⑭ Audio/TC Head | ㉓ Tension Regulator Guide | |
| ⑤ Take-up Side Reel Table | ⑮ Threading Motor | ㉔ Supply Side Rail (O) | |
| ⑥ Take-up Side Sub Soft Brake | ⑯ IR-11 | ㉔ Supply Side Rail (I) | |
| ⑦ Take-up Side Soft Brake | ⑰ Take-up Side Sub-base | ㉕ TG-1 | |
| ⑧ Reel Slider | ⑱ Supply Side Idler | ㉖ Drum | |
| ⑨ Main Pinch Arm | ㉑ Supply Side Reel Table | ㉖ IR-1 | |

- ① Cassette Detection Sensor
- ② Cassette Detection Shutter
- ③ Take-up Reel Rotation Detector
- ④ Tape End Sensor
- ⑤ Tape Beginning Sensor
- ⑥ Cassette-up Compartment Lock switch
- ⑦ Lock Arm
- ⑧ Miss-REC Lever B
- ⑨ Supply Reel Rotation Detector
- ⑩ Metal/Oxide Selector
- ⑪ Metal Detection Lever
- ⑫ Mechanical Function Cam Sensor

- ① Relay Pulley
- ② Cam Gear Base
- ③ Threading Ring T
- ④ Gear Base
- ⑤ Function Cam
- ⑥ Timing Belt
- ⑦ Capstan
- ⑧ Threading Ring S

Function of the Sensors

- Miss-REC Lever B (for metal particle tape)
This is a record-proof switch for metal particle tape.
- Metal/Oxide Selector
This switch detects whether an oxide tape or a metal particle tape is being used.
- Cassette Detection Sensor
This switch detects whether a cassette is being inserted.
- Cassette-up Compartment Lock Switch
This switch detects that the Cassette-up Compartment is locked.
When the Cassette-up Compartment is locked, threading is performed.
When EJECT mode, the Cassette-up Compartment is opened, the EJECT mode is finished.
- Mechanical Function Cam Sensor
(Cam Position Sensor)
This sensor detects whether the Cam is moved to the designed position or not.

2-2-2. Location of the Printed Circuit Boards

Mechanical Deck

- ① SR-55 Board
- ② FL-160 Board
- ③ DR-254 Board
- ④ FE-18 Board

Main Chassis (1)

- ① MB-552 Board
- ② TC-86B (UC)/TC-86C (EK) Board
- ③ VO-46B (UC)/VO-46C (EK) Board
- ④ SS-57B (UC)/SS-57C (EK) Board
- ⑤ AU-185 (UC)/AU-185P (EK) Board
- ⑥ CN-983 Board

Main Chassis (2)

- ⑦ CN-935 Board
- ⑧ DC-67 Board
- ⑨ DC-68 Board
- ⑩ CN-1123 Board
- ⑪ LED-214 Board
- ⑫ KY-285 Board

	DR-254	DRUM MOTOR DRIVER DRUM FG/PG AMP
	MB-552	MOTHER BOARD
	TC-86B/ TC-86C	TC GENERATOR/READER TC SWITCH AUDIO IN/OUT AMP AUDIO NOISE REDUCTION

2-4. PRECAUTIONS ON TIGHTENING THE SCREWS

(1) The Fixing Screws to the Chassis

The PVV-3/3P is compact and lightweight, so many M1.4×2.5 screws (1.4 mm dia.) and M2×5 and M2×8 screws (2 mm dia.) are employed.

An aluminum diecast chassis is employed. Pay careful attention to the tightening torque when tightening the screws. Stronger torque may damage the chassis screws.

The torque screwdriver and bits below are provided.

	SONY Parts No.
Torque driver	J-6325-400-A
Bit for M1.4	J-6325-110-A
Bit for M2	J-6325-380-A

Screw M1.4 torque: 0.09 ± 0.01 N.m
(0.9 ± 0.1 kg.cm)

Screw M2 torque: 0.3 ± 0.05 N.m
(3.0 ± 0.5 kg.cm)

The above torque driver can be used for both screws M1.4 and M2.

If you damage the chassis screws when tightening screw M1.4, use the following screw:

	SONY Parts No.
M1.7×3	2-641-348-02
or	
M1.4×5	3-729-013-71

To distinguish the above screw from screw M1.4, mark the screw top in red. Apply the locking compound at the same time.

(2) The Locking Screw of the Tape Guide Upper Flange

When the height adjustment of the tape guide is performed in the Tape Run Alignment, use the tape guide adjustment driver (SONY Parts No.: J-6321-500-A) prepared for the maintenance tool.

After the height adjustment of the tape guide is completed, tighten the locking screw of the tape guide upper flange with the torque driver by the following procedures.

	SONY Parts No.
Torque Driver	J-6325-400-A
Torque Driver Bit (For M2)	J-6325-380-A
Tightening Torque	0.09 ± 0.01 N.m (0.9 ± 0.1 kg.cm)

- Set the torque driver bit (for M2) on the torque driver.
- Set the torque driver on the screw at the top of the locking knob of the tape guide adjustment driver.
- Push down the torque driver and turn it clockwise.

2-5. CONNECTION OF VTR AND CAMERA

1. Align the projection of the VTR into the slot of the camera (DXC-637 and so on). Slide the VTR in the direction of the arrow, and press it so that the 50-pin connector is firmly fixed.
2. Install two B 4 × 12 screws (supplied) near the camera's grip, and B 4 × 6 screws (supplied) on the camera's shoulder pad.
3. Remove the VTR from the camera in the reverse order of steps 1 and 2.

NOTE: When connecting the camera without supplying the screws (B 4 × 12 and B 4 × 6), use the screws with supplied to PVV-3/3P.

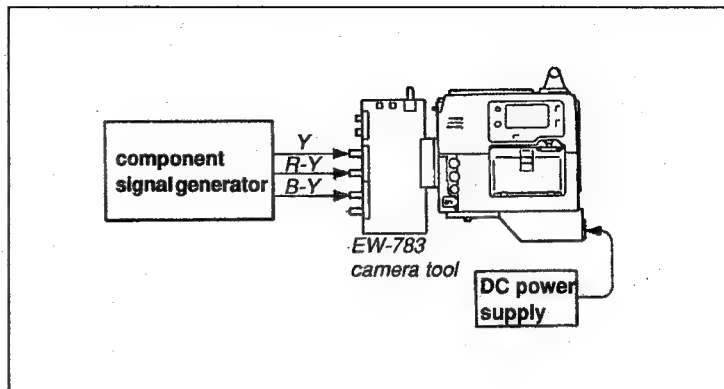

2-6. USING THE UNIT WITHOUT THE CASSETTE TAPE

1. Put the unit into EJECT mode.
2. Remove the cassette-up compartment lid. (refer to section 2-1.)
3. While pressing the Cassette-in switch, press both sides of the arm of the cassette-up compartment at the same time, and lock the arm.
(NOTE) When pressing the arm of the cassette-up compartment, take great care not to damage it.
4. After moving the reel chassis and starting rotating the reel, release the Cassette-in switch.
5. Press the desired mode button.

2-7. PUT THE VTR INTO THE REC MODE WITHOUT CONNECTING A CAMERA

The PVV-3/3P cannot record the video and audio signals without connecting a camera. Therefore, in order to put VTR into the REC mode without connecting the camera, it is necessary to use the camera tool "EW-783". Use the camera tool (EW-783) to input the component signal from the component signal generator. The VTR is in REC mode.

2-8. TAKING UP SLACK IN THE CASSETTE TAPE

1. Turn off the power switch.
2. Remove four screws, then remove the cassette-up compartment lid. (Refer to Section 2-1.)
3. Install the cassette dummy cover. (fixtures for service)

NOTE:

- Remove the lid gently it because it is connected to the AU-185 Board with flat cable and flexible card wire.
- After removing the cassette-up compartment lid, be sure to install the cassette dummy cover for reinforcement before operating because the cassette-up compartment lid is fragile.

4. While holding the cassette dummy cover downwards, turn the screw in the counterclockwise direction shown in the figure about four times with phillips screwdriver.
5. Turn the Capstan in the counterclockwise direction with fingers until the feed side of the cassette tape begins to rotate.
6. After winding the tape onto the cassette, release the cassette dummy cover, then take out the cassette tape.

2-9. CLEANING WHEN HEADS ARE CLOGGED

If the video head is clogged, clean the head as described in the following procedures.

- Cleaning with the cleaning cassette

1. Insert the cleaning cassette BCT-5CLN in the unit, then play back the tape for five seconds, and eject the tape at once.

NOTE: • Make sure to use the cleaning cassette BCT-5CLN.

If the cleaning is performed by cleaning cassettes other than the BCT-5CLN, abnormal friction or damage of the video head may occur.

- Do not use the cleaning cassette with rewind.

2. Confirm that the head clog is clear.

If the video head is clogged after cleaning with the cleaning cassette, clean the video head as described in the following procedure.

- Cleaning with the cleaning piece

1. Hold the cleaning piece moistened with cleaning fluid against the heads gently.
2. Slowly rotate the upper drum in the direction of the head's rotation with hand and clean the video head.

NOTE: • Do not move the cleaning piece in a vertical direction. This will damage the video head.
• Make sure to turn the POWER OFF, when cleaning is performed.

2-10. RELEASING THE HUMID TIMER WHEN THE UNIT IS HUMIDIFIED

When HUMID MODE is off in the SYSTEM MENU No.402, HUMID ALARM is displayed to protect the tape if the unit is humidified, and the VTR stops for a period specified by the HUMID TIMER.

The HUMID TIMER stops the operations of the unit to protect the tape if the unit becomes humidified, and this timer is designed to dehumidify the unit when left alone.

Therefore, if there is no humidity in the unit after the humidity is removed artificially, the unit cannot be started because the HUMID TIMER is not canceled.

To cancel the HUMID TIMER and start the VTR after removing the humidity artificially, perform the following steps:

1. Go to the SYSTEM MENU (refer to section 2-24) and enter HUMID TIMER OFF mode (MENU No.509).

* xxx indicates the remained time (min)

2. Press RESET twice to set XXX to 0 in order to cancel the HUMID TIMER.

* However, if the unit is still humidified, the timer cannot be canceled.

2-11. REMOVAL/INSTALLATION OF THE BOARDS

2-11-1. CN-935 Board

1. Remove four screws (B2.6×6), then remove the bottom panel.
2. Remove the screw (B2.6×5) shown in the figure, then remove the DD Converter.
3. Remove the three screws (B2.6×6) and three internal tooth lock washers (2.6) shown in the figure, then disconnect the connector (CN1) of the CN-935 board, then pull out the board.
4. Disconnect the two connector (CN2, CN3) of CN-935 board, then remove the board.

2-11-2. CN-1123 Board

1. Remove four screws, then remove the bottom panel. (Refer to Section 2-11-1.)
2. Remove a screw (B 2.6×5), then remove the DD Converter. (Refer to Section 2-11-1.)
3. Remove two screws a (P2.6 × 5) shown in the figure and disconnect the connector (CN24) of the MB-552 board, then remove the DC IN connector.
4. Remove four screws b (P2.6 × 5) shown in the figure, then remove two XLR connector (3P, FEMALE).
5. Remove the screw (B2.6×5) and the lug terminal of the CN-1123 board.
6. Remove the earphone jack and the remote jack with the jack not driver.
(SONY Parts Number: 7-700-742-02)
7. Disconnect the connector (CN1) of the CN-1123 board, then remove the board.

2-11-3. DR-254 Board

1. Open the right side panel. (Refer to Section 2-1.)
2. Remove the SS-57 board. (Refer to Section 2-11-7.)
3. Disconnect the connector (CN601) of the DR-254 board.
4. Remove five washerhead screws (P1.4 × 2.5), then remove the shield plate.
5. Remove three washerhead screws (P1.4 × 2.5), then remove the board.

**2-11-4. KY-285 Board**

1. Remove two screws (B2.6 × 6) of Key top panel Ass'y.
2. Disconnect the flat cable (CN1) of the KY-285 board.
3. Remove two tapping screws (PTP2 × 4) of the KY-285 board, then remove the board.

2-11-5. MB-552 Board

1. Open the right side panel. (Refer to Section 2-1.)
2. Remove the SS-57 board. (Refer to Section 2-11-7.)
3. Remove the left side panel and the cassette-up compartment lid. (Refer to Section 2-1)
4. Remove the three screws (B2.6 × 5) of the flexible holder, then disconnect the flexible card wire (CN1), and the flat cable (CN2) of the AU-185 board.

5. Loosen two screws (B3 × 6), then remove the TOP panel. (These screws are retained on the top panel, so they are not out of it).

6. Install the cassette dummy cover (fixtures for service).

7. Loosen the four screws which secure the mechanical deck block to the unit by using hexagon bit (across flat has 1.5 mm). (These screws are retained on the mechanical deck block, so they are not out of it.)

8. Disconnect the flat cable (CN28) of the MB-552 board, then remove the mechanical deck block.
9. Remove the SS-57 board.
(Refer to Section 2-11-7.)

10. Remove four screws (B2.6 x 5) of the MB-552 board.

11. Disconnect the flat cable (CN11) and the connector (CN23) of the MB-552 board.

12. Disconnect the two flat cables (CN1, CN2) and the connector (CN4) of the VO-46 board.

13. Disconnect the two flat cables (CN1, CN2) of the TC-86 board.

14. Remove the screw (B2.6 × 5), then remove the DD converter. (Refer to Section 2-11-1.)
15. Remove the three screws (B2.6 × 6) and three internal tooth lock washers (2.6) and loosen the CN-935 board, then disconnect the connector (CN21) of the MB-552 board from the connector (CN1) of the CN-935 board. (Refer to Section 2-11-1.)
16. Disconnect the two connector (CN22, CN24) on the reverse side of the MB-552 board, then remove the board.

2-11-6. CN-983 Board

1. Remove the front panel. (Refer to Section 2-1.)
2. Remove two screws (PSW 3 × 6), then pull out the CN-983 board.
3. Disconnect the flat cable (CN2) and three connectors (CN3, CN4, CN5) of the CN-983 board.
4. Remove two screws (B2.6 × 5) of the connector bracket, then remove the CN-983 board.

2-11-7. SS-57 Board

1. Open the right side panel. (Refer to Section 2-1.)
2. Disconnect the six flat cables (CN301, CN302, CN303, CN304, CN307, CN309) and the flexible card wire (CN306) of the SS-57 board.
3. Disconnect the three connector (CN305(R), CN308(W), CN311(G)) of the SS-57 board.

4. Disconnect the three connector (CN3, CN5, CN6) of the VO-46 board.
5. Remove six screws (B2.6 x 5) of the SS-57 board, then remove the board.

2-11-8. SR-55 Board

1. Open the right side panel. (Refer to Section 2-1.)
2. Remove the SS-57 board. (Refer to Section 2-11-7.)
3. Remove the DR-254 board. (Refer to Section 2-11-3.)
4. Remove three washerhead screws (P1.4 × 2.5), then remove the SR-55 board.

2-11-9. TC-86 Board

1. Open the right side panel. (Refer to Section 2-1.)
2. Remove the VO-46 board. (Refer to Section 2-11-11.)
3. Disconnect the two flat cables (CN1, CN2) and the five connector (CN3, CN201R, CN101W, CN701B, CN703) of the TC-86 board.
4. Remove the black seal of the volume knob, then loosen each screws (P1.7×3) of the Audio Level volume (CH-1 and CH-2).
5. Remove six screws (B2.6×4) and two external tooth lock washers of the TC-86 board, then remove the board.

2-11-10. VO-46 Board

1. Open the right side panel. (Refer to Section 2-1.)
2. Disconnect the two flat cables (CN1, CN2) and the four connector (CN3, CN4, CN5, CN6) of the VO-46 board.
3. Remove two screws (B2.6 × 5) and the external tooth lock washer of the VO-46 board.
4. Remove the two PCB hinges shown in the figure, then remove the board.

2-12. INSTALLATION OF THE REEL CHASSIS

Tool : Sony grease

Sony oil

Mode: EJECT

Installation procedure:

1. Smear Sony grease on the back of the Tension Regulator of the Reel Chassis Assembly as shown in the figure.
2. Gently push the Tension Regulator Arm in the direction of the arrow A.
3. Apply a 1/4 drop of Sony oil on each of the four shafts "A" of the Mechanical Deck Block.
4. Move the slider in the direction of the arrow B fully by hand.
5. Insert 3 mm diameter polyslider washers (0.5 mm thick) (3-701-439-21) onto the two shaft of the slider.
6. Insert the Reel Chassis in the direction shown in the figure so that the gear is not contact with the reel chassis.
 - (i) Insert the four shafts "A" of the Mechanical Deck Block into the four longitudinal holes "A" of Reel Chassis.
 - (ii) Insert the two longitudinal holes "B" onto the two shafts of the Reel Chassis.
 - (iii) Insert the longitudinal hole "C" of the Reel Chassis onto the Pinch Arm Roller.
 - (iv) Insert the shaft "B" of the Reel Chassis into the longitudinal hole of the S Tension Regulator Driving Arm.
7. Insert the LS Roller (3-723-007) onto the four shafts "A" of the Mechanical Deck Block as shown in the figure. Fasten with the E type stop ring (1.5 mm).
8. Turn the screw on the front of the A/T Head by the screwdriver, and repeat threading and unthreading two or three times and check that they can be done smoothly.

2-13. REPLACEMENT OF FLAT CABLES/FLEXIBLE CARD WIRES

The following flat cables/flexible card wires are used on this unit.

Replace the flat cables or flexible card wires in the following procedures.

PVV-3/3P has the connectors of three angle types. Be careful to disconnect and connect the connectors.

Connection	Number of Pin	Number of Flat Cable/ Flexible Card Wire
AU-185 Board~ MB-552 Board	24P	1
DR-254 Board~ SS-57 Board	16P	1
KY-285 Board~ SS-57 Board	10P	1
MB-552 Board~ CN-983 Board	25P	1
MB-552 Board~ SS-57 Board	30P	1
MB-552 Board~ SS-57 Board	26P	1

Connection	Number of Pin	Number of Flat Cable/ Flexible Card Wire
MB-552 Board~ TC-86 Board	30P	2
MB-552 Board~ VO-46 Board	24P	1
MB-552 Board~ VO-46 Board	10P	1
SS-57 Board~ capstan motor	15P	1
SS-57 Board~ Function cam sensor	8P	1
A/T HEAD ~ AU-185 Board/ SS-57 Board	10P/5P	1

<Angle Types>

• Disconnecting procedure

Slide the * marked portions of connector in the direction of the arrows, then disconnect the flat cable from the connector.

• Connecting procedure

Pull up the * marked portions of the connector, insert the flat cable on its contacting side is faced to the flat cable, and insert it as far as it will go until the line indicated on the flat cable. Push down the * marked portions, then slide it in the direction of the arrow to lock.

• Connecting/Disconnecting (MB-552 board, 25P)

Slide the * marked portions of connector in the direction of the arrows, then disconnect the flat cable from the connector. For connecting, pull up the * marked portions, insert the flat cable. Push down the * marked portions, then lock the connector.

• Connecting/Disconnecting (CN-983 board, 25P)

Slide the * marked portions of connector in the direction of the arrows, then disconnect the flat cable from the connector. For connecting, insert the flat cable and push down the * marked portions. Then, lock the connector.

2-14. NOTE ON REMOVING THE PRINTED CIRCUIT BOARDS

When the power switch is turned off, power of this unit is supplied in order to keep the time code data. As to TC-86 board, keep the time code data by the lithium battery.

Replace the board when power is supplied, there is possibility of the damage of IC in the board. Before removing the board, shut off the power as described in the following procedures.

1. Turn the power switch off.
2. Remove the lithium battery from the TC panel.
(This applies to the removal of the TC-86 board only.)
3. Remove the battery.
4. Disconnect the cable from the EXT DC IN connector.

2-15. CONNECTOR INPUT/OUTPUT SIGNAL

INPUT

- GENLOCK VIDEO IN : BNC Type
1.0 Vp-p, 75 Ω

2-16. APPLICABLE CONNECTOR

When external cables are connected to the various connectors on the connector panel during maintenance, the hardware listed below (or equivalents) must be used.

Panel indication	Applicable connector
CH-1/CH-2 (+ 48 V)	1-508-084-00 CONNECTOR, XLR 3P, MALE
DC IN	1-508-362-00 CONNECTOR, XLR 4P, FEMALE
TC IN/OUT	1-560-069-11 CONNECTOR, BNC, MALE
GENLOCK VIDEO IN	1-560-069-11 CONNECTOR, BNC, MALE
VIDEO OUT	1-560-069-11 CONNECTOR, BNC, MALE
PB ADAPTOR	1-566-771-11 CONNECTOR, 20P, MALE
EAR	PLUG, MINI, STEREO
REMOTE	PLUG, MINI
50P Connector (Not indicated on the panel)	1-566-579-11 CONNECTOR 50P, MALE

2-17. BOARD SWITCH SETTINGS

2-17-1. TC-86 Board

- S550 (DOLBY, OFF ⇄ MENU ⇄ ON)

When this switch is set to MENU, the unit is entered to the SYSTEM MENU (menu No. 303), then selecting of this switch can be performed.
(refer to section 2-24 for the operation of MENU.)

The factory setting is MENU.

TC-86 BOARD (COMPONENT SIDE)

2-17-2. VO-46 Board

- S700

Sets H-LOCK to ON or OFF in PB mode.

The factory setting is ON.

VO-46 BOARD (COMPONENT SIDE)

2-18. EXAMPLE SYSTEM CONFIGURATION

This unit can be attached to a DXC-637/637P/537A/537AP/327A/327AP series color video camera to make up a combination camera/VTR.

The diagram below shows an example camera/VTR system configuration in which the camera is a DXC-637K or DXC-637PK depending on whether the VTR is an PVV-3 or PVV-3P

2-19. CHANGING THE VOLTAGE OF BATTERY BEFORE END/END/END

2-19-1. Changing the Voltage of Battery Before End/End (1)

The voltage of the battery before end can be changed with an external DC battery from the SYSTEM MENU as follows:

Range setting: 11.0 V to 12.5 V

Minimum setting unit: 0.1 V

Voltage of Battery before end: set to 11.3 V when shipped.

(Battery almost exhausted)

Voltage of Battery end: set to 11.0 V when shipped.

(Battery exhausted)

Equipment Required: Camera (DXC-637 and so on),

DC battery, Digital voltmeter,

Blank tape (BCT-30Ma)

Switches settings: LIGHT, BACK TALLY, LIGHT; OFF

[Set up]

1. Remove the bottom panel.
(Refer to section 2-11-1, step 1.)
2. Connect a camera (DXC-637 and so on) to the PVV-3/3P.
3. Connect a DC battery to the DC IN connector.
4. Insert a blank tape and put the unit into REC mode.

- NOTE:**
- Contact the lead tip of the digital voltmeter to the DC connector as shown in Fig.1, and adjust the voltage of the DC battery to be the desired value.
 - Be careful not to contact the lead tip of the digital voltmeter to the DC-DC converter. To prevent the battery from shorting, we recommend to tape the side of the DC-DC converter.

Fig.1

LCD Display

* XXX indicates the remaind time.

[Battery before end setting mode]

1. Go to the SYSTEM MENU (refer to section 2-24), and select "Battery before end setting" mode (Menu No. 501).
2. Press the RESET (MENU SET) button to turn the voltage display part off then on, then input the desired voltage. with measured by digital voltmeter to the DC IN connector.
3. Press the RESET (MENU SET) button (the desired voltage is stored in EEPROM).

When the desired voltage is stored, display "YES".

If the value cannot be stored in EEPROM because of an error, display "no". In this case, repeat steps 1 to 3.

NOTE: The value shown in the voltage display part of LCD is only for reference.

[Battery end setting mode]

1. Go to the SYSTEM MENU (refer to section 2-24), and select "Battery end setting" mode (Menu No. 502).
2. Press the RESET (MENU SET) button to turn the voltage display part off then on, then input the desired voltage. with measured by digital voltmeter to the DC IN connector.
3. Press the RESET (MENU SET) button (the desired voltage is stored in EEPROM).
When the desired voltage is stored, display "YES".
If the value cannot be stored in EEPROM because of an error, display "no". In this case, repeat steps 1 to 3.

NOTE1: VTR operation stops at the voltage of battery end which is set.

The set voltage is 11.0 V

NOTE2: Be not the value shown in the voltage display part of LCD for reference.

NOTE3: When entering this menu by mistake, be sure to press the MENU button to quit the menu. To quit the menu, never press the RESET button. When pressing the RESET button, the data during setting must be written.

LCD Display

* XXX indicates the remaind time.

2-19-2. Changing the Voltage of Battery Before End/End (2)

The voltage of the battery before end can also be changed without any equipments shown in the former item from the SYSTEM MENU as follows: However, to measure the voltage from the former item can be more accurate than to done from this item. Therefore, we recommend to done from the former item, section 2-19-1.

Range setting: 11.0 V to 12.5 V

Voltage of Battery before end: set to 11.3 V when shipped.
(Battery almost exhausted)

Voltage of Battery end: set to 11.0 V when shipped.
(Battery exhausted)

Standard value when shipped:

Voltage (V)	11.0	11.1	11.2	11.3	11.4	11.5	11.6	11.7	11.8	11.9	12.0
Standard value	b0	b5	bA	bF	C5	CA	CF	d4	d9	dE	E3

* The standard value might be different from every unit.
The above value is a mean value.

Switch settings: TALLY: OFF

Setup: • Turn on the power.

[Battery before end setting mode]

1. Go to SYSTEM MENU (refer to section 2-24), and select "Battery before end setting" mode (Menu No. 501).
2. Press the RESET (MENU SET) button to turn the voltage display part off then on.
3. Press the SHIFT button with pressing the ADVANCE button.
4. Make a memo of the value as shown in the voltage display part.
5. Press the ADVANCE button or SHIFT button to change the voltage.
- * Press the ADVANCE button to change value. Press the SHIFT button to shift a digit.
As a guide, to up one in the right digit is to rise about 0.02 V.
6. Press the RESET (MENU SET) button (the desired voltage is stored in EEPROM).

When the desired voltage is stored, display "YES". If the value cannot be stored in EEPROM because of an error, display "no". In this case, repeat steps 1 to 6.

NOTE 1: The value shown in the voltage display part of LCD is only for reference.

NOTE 2: When forgetting making a memo of the value, change the value with relative to the above standard value.

LCD Display

* XXX indicates the remaind time.

**[Battery end setting mode]**

1. Go to the SYSTEM MENU (refer to section 2-24), and select "Battery end setting" mode (Menu No. 502).
2. Press the RESET (MENU SET) button to turn the voltage display part off then on.
3. Press the SHIFT button with pressing the ADVANCE button.
4. Make a memo of the value as shown in the voltage display part.
5. Press the ADVANCE button or SHIFT button to change the voltage.
- * Press the ADVANCE button to change value. Press the SHIFT button to shift a digit.
As a guide, to up one in the right digit is to rise about 0.02 V.
6. Press the RESET (MENU SET) button (the desired voltage is stored in EEPROM).

When the desired voltage is stored, display "YES". If the value cannot be stored in EEPROM because of an error, display "no". In this case, repeat steps 1 to 6.

NOTE 1: VTR operation stops at the voltage of battery end which is set. The set voltage is 11.0 V.

NOTE 2: Be not the value shown in the voltage display part of LCD for reference.

NOTE 3: When entering this menu by mistake, be sure to press the MENU button to quit the menu. To quit the menu, never press the RESET button. When pressing the RESET button, the data during setting must be written.

LCD Display

* XXX indicates the remaind time.

2-21. USE OF CAMERA TOOL (EW-783)

Camera tool has terminals of every kind component video signal input, play back video signal output, mic signal input and earphone output. This also has VTR S/S switch, REC REVIEW switch. SAVE → STBY switch and every kind of LED DISPLAY system.

When every kind component video signal is input during video system alignment, and when VTR is connected as follows to check with no camera during PVV-3/3P maintenance, use the camera tool.

1. Switch operation

VTR S/S Switch

This switch is VTR record start/stop switch. When this switch is pressed, recording starts. When this switch is pressed again, recording stops.

REC REVIEW Switch

When this switch is pressed, part of recorded portion plays back. Confirm recording display in PB VIDEO OUT display during waiting to record.

SAVE → STBY Switch

- SAVE
VTR is in power-saving condition.
- STBY
VTR is waiting to record. Press [VTR S/S] switch, and recording starts at once.

2. Camera Tool Connection and Alignment

When electrical alignments are performed with the camera tool, never fail to perform SYNC DELAY alignment connecting the camera tool as follows.

2-22. NOTES ON REPAIR PARTS

2-22-1. Notes on Repair Parts

- (1) **Safety Related Components Warning**
Components marked with ## on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation. Replace these components with Sony parts whose part numbers appear in this manual or in service bulletins and service manual supplements published by Sony.
- (2) **Standardization of Parts**
Repair parts supplied from Sony Parts Center may not be always identical with the parts which actually in use due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts". This manual's exploded views and electrical spare parts list are indicating the part numbers of "the standardized genuine parts at present".
- (3) **Stock of Parts**
Parts marked with "o" SP (Supply Code) column of the spare parts list are not normally required for routine service work. Orders for parts marked with "o" will be processed, but allow for additional delivery time.
- (4) **Units for Capacitors and Resistors**
The following units may be assumed in schematic diagrams, electrical parts list and exploded views unless otherwise specified.
Capacitors : μF
Resistors : W

2-22-2. Replacement Procedure for Chip Parts

Required Tools

- Soldering iron: 20W If possible, use a soldering iron tip heat-controller at $270 \pm 10^\circ\text{C}$.
- Braided wire : SOLDER TAUL or equivalent
Sony part No. 7-641-300-81
- Solder : 0.6 mm dia. is recommended.
- Tweezers

Soldering Conditions

- Soldering iron temperature : $270 \pm 10^\circ\text{C}$.
- Soldering time : less than two seconds per a pin.

• Resistor and Capacitor Replacement

- (1) Place the soldering iron tip onto the chip part and heat it up until the solder is melted. When the solder is melted, slide the chip part aside.
- (2) Make sure that there is no pattern peeling, damage and/or bridges around the desoldering positions.
- (3) After removing the chip part, presolder the area, in which the new chip part is to be placed, with a thin layer of solder.
- (4) Place new chip part in the desired position and solder both ends.

NOTE: Once a chip part has been removed, never use it again.

• Transistor and Diode Replacement

- (1) Cut the terminals of the chip part with a nipper.
- (2) Remove the cut leads.
- (3) Make sure that there is no pattern peeling, damage and/or bridges around the desoldering positions.
- (4) After removing the chip part, presolder the area, in which the new chip part is to be placed, with a thin layer of solder.
- (5) Place new chip part in the desired position and solder the terminals.

• IC Replacement

- (1) Using the braided wire, "SOLDER TAUL" Sony Part No. 7-641-300-81, remove the solder around the pins of the IC-chip to be removed.
- (2) While heating up the pins, remove the pins one by one using sharp-pointed tweezers.
- (3) Make sure that there is no pattern peeling, damage and/or bridges around the desoldering positions.
- (4) After removing the chip part, presolder the area, in which the new chip part is to be placed, with a thin layer of solder.
- (5) Place new chip part in the desired position and solder the pins.

2-23. ERROR CODES

This set provides an error display function that displays the error if a trouble condition occurs.

When a failure is detected in the normal operating state, the error is immediately displayed on the display window.

And then, the warning indicator lights or blinks (4 Hz frequency) and the tally indicator blinks (4 Hz or 1 Hz frequency).

In most cases, when an error occurs, the system enters the protective action and stops to operate.

Each error is displayed by its error code.

The contents of the error codes are as follows.

Error code display

1. Main code

The factors of error are divided into three classes.

Er0x-xxx: defects around mechanism control

Er3x-xxx: defects of sensor system

Er91-xxx: defects of CPU and around CPU

2. Sub code

Sub code subdivides the factors of error.

When the information of error codes are sufficiency, the sub code is "000".

(1) Sub code of the defects around mechanism control

Error code display

a. Defects detection mode

0: It cannot specify the mode.

2: Threading mode

3: STOP mode

4: F FWD/REW mode

6: PLAY/REC mode

8: Unthreading mode

b. Defects detection device

2: Function Cam Motor / Cam Position Sensor

3: Drum Motor / Drum FG

4: Capstan Motor / Capstan FG

5: Supply reel FG

7: Take up reel FG

9: Both supply and take up reels FGs

c. Detail of state

1: Operation cannot end within the fixed time.

2: It detects the unusual speed.

4: It can not detect the FG.

(It detects the tape slack)

(2) Sub code of defects of CPU and around CPU.

Error code display

a. Defects detection CPU

1: System Control CPU (SS-57 board, IC1)

2: LCD Control CPU (TC-86 board, IC1)

4: Mechanism Control CPU (SS-57 board, IC201)

b. CPU or device which is regarded as a defect

1: System Control CPU (SS-57 board, IC1)

2: LCD Control CPU (TC-86 board, IC1)

3: EEPROM (SS-57 board, IC214)

4: Mechanism Control CPU (SS-57 board, IC201)

5: Time Code CPU (TC-86 board, IC10)

7: EEPROM (TC-86 board, IC3)

c. Detail of states

5: Communication impossibility

6: Read data check sum NG

2-24. MENU

The settings of the system, adjustments and the settings of the VTR menus during maintenance can be determined using the LCD on this unit. There are three menus:

1. **USER MENU**
For user operations.
2. **SYSTEM MENU**
Used to set up the system operations. (This menu is not for operators and is not described in the operation manual.)
3. **MAINTENANCE MENU**
This menu is used when performing maintenance (including adjustments).

2-24-1. USER MENU

To make settings using the USER menu

1. Press the MENU button in the TC panel.

2. Press the ADVANCE button repeatedly to change the menu number in the LCD to the required menu number.
3. Press the SHIFT button to select the menu.
The current setting appears, and the setting can be changed.
4. Press the SHIFT button to switch to the next portion to set, then press the ADVANCE button to change the value of the blinking numbers.
5. Press the RESET (MENU SET) button.
The setting is registered and the menu number blinks again.
6. Press the MENU button.
The LCD returns to the display before the USER menu.

The LCD indicates "101 1994", and the unit enters the USER menu.

□ is the factory setting

MENU No.	MENU DESCRIPTION	LCD/ FACTORY SETTING	CONTENTS
101	—	101 1994	Setting the real time clock and calendar
201	DRUM RUN METER	201 XXXX	<p>Displaying the head drum/tape transport/total operation hours A: Head drum operating hours B: Tape transport operation hours C: Operating hours (Total with power on)</p> <p>※ Select menu number 201, and press the SHIFT button. Pressing the SHIFT button cycles through the following displays.</p> <ul style="list-style-type: none"> • Head drum operating hours • Tape transport operation hours • Operating hours (Total with power on) • Menu number indication
204	DF/NDF SELECT	204 dF DF / NDF	<p>Selecting drop-frame/non-drop-frame mode of time code generator NDF : Non-drop-frame DF : Drop-frame ※ NTSC only used.</p>
206	ANTON BAUER	206 OFF	Changing ON/OFF of anton battery (Battery indicator and super light control)
207	STANDBY TIMER	207 08 1 / 3 / 5 / 8	Sets the release time of standby mode to 1, 3, 5 or 8 minutes.
208	VITC INSERT LINE	208 16 18 12 / 13 / 14 / 15 / 16 17 / 18 / 19 / 20 / 21 22	<p>Sets the insertion lines of VITC. The possible settings are in the range of 12 through 19 for PVV-3 and 9 through 22 for PVV-3P.</p>
209	REAL TIME RECORDING FUNCTION	209 OFF ON / OFF	Records the real time on the VITC user bits.

Refer to section 1 on pages 1-27 to 1-28 for the USER menu.

2-24-2. SYSTEM MENU

To make settings using the system menu

1. Press the MENU button while pressing the SHIFT button in the TC panel.

2. Release the SHIFT button while still pressing the MENU button.

Confirm that the display indicates "600 OFF" after 1 second, then release the MENU button.

3. Press the ADVANCE button or SHIFT button to change the menu number in the LCD to the required menu number.

Pressing the ADVANCE button (+ button) cycles through the following displays:

600→301→302→303→509→600→

Pressing the SHIFT button (– button) cycles through the following displays:

600→509→503→502→301→600→

4. Select the required menu number, then press the RESET (MENU SET) button.

The current setting appears, and the setting can be changed.

5. Press the ADVANCE button to change the value of the blinking number.

6. Press the RESET (MENU SET) button at the required menu number.

The settings is registered and the menu number blinks again.

7. Press the MENU button.

The LCD returns to the display before the SYSTEM menu.

The LCD indicates "101 1994".

□ is the factory setting

MENU No.	MENU DESCRIPTION	LCD/ FACTORY SETTING	CONTENTS
303	DOLBY ON/OFF SELECT	<div>303 on</div> <div>ON / OFF</div>	Selects the DOLBY ON/OFF. ON : DOLBY ON OFF: DOLBY OFF NOTE: Switches on and off in menu mode only when S550 on the TC-86 board is set to "MENU". (Refer to Section 2-17 for setting of S550/TC-86 board.)
304	AUDIO CH1 ATTENUATOR ON/OFF SELECT	<div>304 off</div> <div>ON / OFF</div>	Selects the gain when audio input CH1 (XLR) at the rear is MIC. ON : Attenuated about 20 dBu (input sensitivity -60 dBu) Turn on when sound is distorted even if the volume is low. OFF: Normal level (input sensitivity -60 dBu)
305	AUDIO CH2 ATTENUATOR ON/OFF SELECT	<div>305 off</div> <div>ON / OFF</div>	Select the gain when audio input CH2 (XLR) at the rear is MIC. ON : Attenuated about 20 dBu (input sensitivity -40 dBu) Turn on when sound is distorted even if the volume is low. OFF: Normal level (input sensitivity -60 dBu)
306	VR CONTROL	<div>306 off</div> <div>ON / OFF</div>	Selects the AUDIO LEVEL knob on the panel or preset volume in the board to set the audio level volume. ON : Preset volume in the board Select when adjusting the audio input level. OFF: AUDIO LEVEL knob on the panel
307	LIMITER ON/OFF SELECT	<div>307 on</div> <div>ON / OFF</div>	Switches the limiter on and off when the audio select switch (TC panel) is "MANU". ON : Limiter ON OFF: Limiter OFF
308	PHASE CORRECTION ON/OFF SELECT	<div>308 on</div> <div>ON / OFF</div>	Selects to corrects the phase or not. ON : Corrects the phase OFF: Not corrects the phase
401	BACK TALLY MODE SELECT	<div>401 off</div> <div>ON / OFF</div>	Changing the real REC mode on and off. ON : REAL REC MODE OFF: REC MODE & WARNING DISPLAY
402	HUMID MODE SELECT	<div>402 off</div> <div>ON / OFF</div>	ON : When VTR is REC mode, REC continue to operate even if the VTR is humidified When VTR is other mode, ON is the same as OFF. OFF: HUMID ALARM is displayed to protect the tape when the unit is humidified, and the VTR stops for the period specified by the HUMID TIMER. (Refer to Section 2-10.)

□ is the factory setting

MENU No.	MENU DESCRIPTION	LCD/ FACTORY SETTING	CONTENTS
403	ROM VERSION DISPLAY	403 1.10	Displays the ROM version number of IC1 on the TC-86 board. For example shown in the left table: version number is 1.10.
404	VITC MENU ON/OFF	404 on ON / OFF	Switchs on and off the VITC INSERT LINE and REAL TIME RECORDING FUNCTION means. (menu No.208 and 209) ON : Displays the menus and the settings are changeable. OFF: Does not display the menus.
405	STANDBY OFF INHIBIT ON/OFF	405 off ON / OFF	Switchs on and off the standby off. ON : Inhibits the standby off, that is, not performs the standby off. OFF: Not inhibits the standby off, that is, performs the standby off.
501	BATTERY BEFORE	501 x x x	Sets the battery-before end voltage (voltage just before the battery loses its power to operate) from 11.0 to 12.5 V. (Refer to Section 2-19.)
502	BATTERY END	502 x x x	Sets the battery-end voltage (voltage when the battery loses its power to operate) from 11.0 to 12.5 V. (Refer to Section 2-19.)
503	J/UC/EK SELECT	J / UC / E	Switches the date format on the LCD. (Setting format of U-bit when TC mode switch 1 or TC panel is set to DATE/TIME.) When setting the U-Bit value, set TC mode switch 1 (TC panel) to the DATE/TIME to record the date on the time code track as follows. J : Year/Month/Day UC : Day/Month/Year EK : Month/Day/Year * The factory setting depends on the model type.
509	HUMID TIMER OFF	509 x x x	When HUMID MODE is off in factory setting menu No. 402, HUMID ALARM is displayed to protect the tape if the unit is humidified, and the VTR stops for a period specified by the HUMID TIMER. However, if the unit is dehumidified manually, the HUMID TIMER can be canceled in this menu. (Refer to Section 2-10.) NOTE: If the unit is still humidified, the timer cannot be canceled.
600	MAINTENANCE MENU ON/OFF SELECT	600 off ON / OFF	Switches on and off the maintenance menus (menu No. 601 to 607). ON : Displays the menus and the settings are changeable. OFF: Does not display the menus.

2-24-3. MAINTENANCE MENU

To use the MAINTENANCE menu

1. Press the MENU button to indicate "101 1994" while pressing the SHIFT button in the TC panel.

2. Release the SHIFT button still pressing the MENU button.

Confirm that the display indicates "600 OFF" after 1 second, then release the MENU button.

3. Press the RESET (MENU SET) button while the menu number 600 is being displayed. (OFF blinks)

4. Press the ADVANCE button and select "on".

5. Press the RESET button. (600 blinks)

The unit enters the maintenance menu (menu number 600-607).

*When menu number 600 is set to "on", the SYSTEM menu is displayed and the settings can be changed.

6. Press the ADVANCE button to change the menu number in the LCD to the required menu number.

Pressing the ADVANCE button (+ button) cycles through the following displays:

600→601→602→603...509→600...

Pressing the SHIFT button (− button) cycles through the following displays:

600→509→503→502...301→600...

7. Press the RESET (MENU SET) button at the required menu number to set up and adjust each menu.

8. Press the MENU button.

The LCD returns to the display before the SYSTEM menu.

The LCD indicates "101 1994".

*Turning the POWER switch off sets menu number 600 to "OFF" automatically, even when set to "on".

☐ is the factory setting

MENU No.	MENU DESCRIPTION	LCD/ FACTORY SETTING	CONTENTS
601	CAPSTAN SPEED ADJUSTMENT	601	Starts to automatically adjust the capstan speed by pressing the RESET (MENU SET) button. After adjustment, data is written to the EEPROM and the LCD displays the adjustment result (yes or no). (Refer to Section 9-1.)
602	STOP SERVO ADJUSTMENT	602	Adjusts the stop servo level with the FF button to increase the gain and REW button to decrease the gain. The FF and REW cannot be used during this adjustment. After adjustment, data is written to the EEPROM by pressing the RESET (MENU SET) button and the LCD displays the adjustment result (yes or no). (Refer to Section 9-2.) In this mode, the slack mute is on regardless of the slack mute setting on menu No.
603	SLACK MUTE SETTING	603 OFF ON / OFF	Switches the mute of the slack detection on and off. ON : Slack mute is on. An oxide tape can be used. OFF : Slack mute is off. Press the RESET (MENU SET) button and ADVANCE button to switch the slack mute on or off. NOTE: This setting is effective only when the power is turned on. After the power is turned off, the slack mute is automatically turned off.
604	TRACKING CONTROL	604	Controls the tracking using the FF and REW keys while playing. When the PLAY button is pressed, the tracking is reset to the center. The FF and REW operations are performed only in STOP mode. * It is possible to enter menu No.604 mode while playing or before playing.
605	SWITCHING POSITION ADJUSTMENT	605	Possible to adjust the switching position using the FF and REW keys while playing. When only the FF/REW button is pressed, the switching position is finely adjusted, when the PLAY + FF or REW keys are pressed, the switching position is coarsely-adjusted. The switching position can be moved only in playback mode. While this menu is selected, H-LOCK of the video is off. After adjustment, data is written to the EEPROM by pressing the RESET (MENU SET) button and the LCD displays the adjustment result (yes or no). The FF and REW operations can be performed in STOP mode. (Refer to Section 6.) * It is possible to enter menu No.605 mode while playing or before playing.

2-25. ANTON BAUER OPERATION

The following functions can be added to the PVV-3 series VTR by mounting the Anton Bauer gold mount QR-SP400A/DC-400A.

- Automatic light system

System which automatically lights up and turns off the Anton Bauer Ultralight System according to the VTR recording start and stop timings of PVV-3/3P VTR.

- Battery remainder display system

The Anton Bauer super magnum series battery is equipped with a battery remainder system. Battery remainder information is also output to the PVV-3/3P VTR via the gold mount. This information is displayed on the LCD display of the VTR (PVV-3/3P) and inside the VF of the camera (DXC-637 and so on).

2-25-1. Mounting

1. Remove the battery case for NP-1B mounted on PVV-3/3P.

2. Remove the cover of the Anton Bauer gold mount.

3. Pull out the harness (3-pin) of the VTR from the storage pocket, connect it to the harness of the gold mount, and keep the connector and remaining part of the harness in the storage pocket. Screw the power supply terminal of the gold mount onto the battery terminal of the VTR. Pay special attention to the polarities.

4. Screw the plate of the gold mount onto the VTR. Place back the cover onto the gold mount in the reverse order of 2. Make sure the harness does not get caught for both steps.

2-25-2. Modification of VTR Settings

The modes that can be used for the Anton Bauer can be specified using the VTR menu of PVV-3/3P. Refer to Section 2-24-1 of this manual, operate menu No. 206 and set the display to "206 on". This switches the LCD display of the VTR (PVV-3/3P) and battery remaining display inside the VF of the camera (DXC-637 and so on) to the remaining display information sent from the battery when the super magnum series battery is used.

2-25-3. Automatic Light System Operations

The PVV-3/3P outputs the ultra light system ON/OFF control signal regardless of the settings of menu 206. The ON signal is output 1-2 frames before the actual start of recording and stops at the same time recording completes.

2-25-4. Battery Remaining Display

The super magnum series battery calculates the amount of electricity (stored) remaining in the battery while observing the charging and discharging conditions. The amount remaining will be displayed in %. The following is displayed on the LCD display of the VTR (PVV-3/3P) and in the VF of the camera (DXC-637 and so on).

- * While the power supply is connected to the DC IN terminal, the original remaining amount will be displayed regardless of the settings of menu 206.
- * The battery before end state indicates that there is less than 10% of battery remaining according to the remaining information from the super magnum series battery. At this time, the BATT on the LCD display and dot at the most left side blink for 1 Hz.
- * The battery end voltage will be the voltage set shown in 2-19 regardless of the setting of menu 206. The BATT on the LCD display blinks for 4 Hz.

• LCD Display of VTR

90% < BATT	E ■■■■■■ F	≤ MAX
70% < BATT	E ■■■■■■ □ F	≤ 90%
50% < BATT	E ■■■■■ □ □ F	≤ 70%
30% < BATT	E ■■■■ □ □ □ F	≤ 50%
10% < BATT	E ■■■ □ □ □ □ F	≤ 30%
EOD < BATT	E ■ □ □ □ □ □ F	≤ 10%

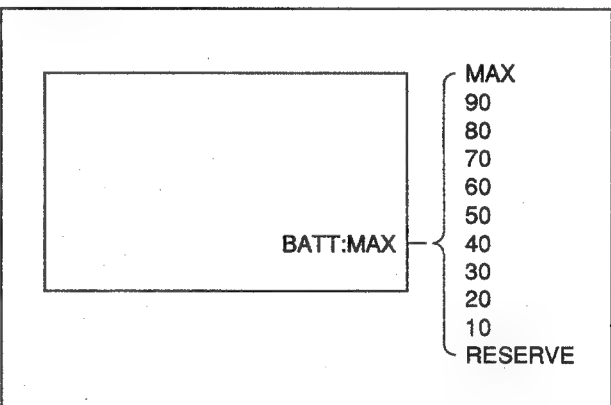

_____ Blinks for 1 Hz at less than 10%
 _____ Blinks for 4 Hz at battery end

- * Messages from the VTR warning system (warning message: Center-top of VF screen. Refer to page 4-10 of instruction manual) are displayed separately from the battery remaining information from the super magnum series battery. (Refer to "LCD Display of VTR")
- * Displays at the bottom right of the VF screen. Displays constantly when the test signal (color bar) and camera status are displayed. Displays when the amount of battery remaining drops below 10% for camera images.

When the battery remaining drops below 10%:
 <BATT:10> lights up for 5 to 10 seconds according to the upgraded version specifications.

When the battery remaining is 0:
 <RESERVE> blinks for 4 Hz constantly according to the upgraded version specifications.

• Display Inside Camera VF

SECTION 3 PERIODIC MAINTENANCE AND INSPECTION

3-1. MAINTENANCE TIME TABLE

The times in the tables, indicating when parts are to be replaced, are not time guarantee for parts. Use these times as references for drawing up maintenance and inspection schedules for extending the life of the unit and tape use.

The time to replace parts differs according to the environments and conditions in which the unit is being used.

◆: Replace ○: Clean

(NOTE) 1. HOURS METER MODE ... A : Drum Running Meter B : Tape Running Meter C : Operation Meter

*2. When replacing the drum assembly, replace the upper drum, slip ring, and brush assemblies as well.

3-2. HOURS METER

The hour meter is in the MENU mode.
 It displays the total number of hours the unit has been power on, the total number of hours the drum has been rotating, and the total number of hours the tape has been running on the display window on the side.
 It is recommended that this hour meter be used as a reference in maintenance.
 Display the hour meter using the following method.

1. Press the MENU switch on the side panel with the tip of mechanical pencil or similar object to set the following display.
 (Example)

2. Press the ADVANCE switch to set the DRUM RUNNING mode.
 (Example)

3. The display will change as follows each time the SHIFT switch is pressed.

Example : A
 This indicates that the drum has been rotating for a total of 150 hours.

4. To end the MENU mode, press the MENU switch again.

(Note) When replacing the TC-86 board, be sure to replace the non-volatile memory (IC3).

3-3. MAINTENANCE AFTER REPAIRS

Perform the following maintenance after repairs regardless of the number of hours the unit has been operating.

1. Clean the video head and stationary heads.
2. Clean the tape running areas.

3-4. CLEANING PROCEDURE

Remove the Cassette-up Compartment for cleaning. (Refer to Section 4-2.)

Cleaning procedures are as follows. Be sure not to insert a cassette tape before the cleaning fluid evaporate completely.

3-4-1. Video Head

Press the cleaning piece moistened with the cleaning fluid and turn the drum slowly with hand.

- (NOTE)
- Never move the cleaning piece in the vertical direction of the head tip during cleaning.
 - Clean the head with the power OFF.

3-4-2. Audio/TC Head

Clean with the cleaning piece moistened with the cleaning fluid.

3-4-3. CTL, FE (Full Erase) Heads

Clean with the cleaning piece moistened with the cleaning fluid.

3-4-4. Tape Movement Areas

Clean with the cleaning piece moistened with the cleaning fluid; Tape guides, drum, capstan and the pinch roller as shown in the figure.

3-4-5. Slip-rings and Brushes

The Head Drum Assembly Slip-rings and Brushes do not require periodic cleaning.

However, if dust adheres to the Slip-rings or Brushes, clean them with the Soft brush which has short hairs. If this brush can not be obtained, use a Blower brush and Cotton Swab.

- (NOTE)
- Do not use alcohol as a cleaning fluid. If the Slip-ring and the Brushes are cleaned with alcohol, the surface tends to attract material which may increase the resistance at the contact area.
 - Do not use conductive grease.

3-4-6. Rail

Clean with the cloth moistend with the alcohol.

3-5. AFTER USED AT SEASIDE OR DUSTY AREAS

It is recommended to check the following items after the news gathering at seaside or dust areas.

1. Clean off sand and other dust in the unit with a cleaning piece moistened with the cleaning fluid, or blow off with an air-brush carefully.
2. Clean the video head and sationary heads with a cleaning piece moistened with the cleaning fluid.
3. Clean the tape movement areas (the drum surface, tape guides, capstan shaft and the pinch roller) with a cleaning piece moistened with the cleaning fluid.
4. Clean the upper of chassis of the unit.
5. Clean the surface of the reel tables contacting with the brake shoes.
6. Rotate by hand and move the tape guides, pulley, capstan and the pinch roller, and check that any abnormal noise sounds or not. If there sounds a noise, replace the part immediately.
7. After the news gathering at seaside, remove the printed circuit board.
Clean the printed circuit board with a cleaning piece moistened with the cleaning fluid after blow off sand on the completely. Then clean the soldering side in the same manners.
8. Clean the connector on the connector panel completely.
9. Perform the operation check and be sure that the machine operates normally.

SECTION 4 REPLACEMENT OF THE MAJOR PARTS

4-1. PRECAUTIONS WHEN REPLACING PARTS

1. The mode of the unit when replacing parts is described in the Parts Replacement. The following is the description of the modes.

- EJECT: In this mode, the Pinch Roller, Tension Regulator Arm, T Base, and S Base have all completely returned to the reel table side.

This condition can be set by turning the screw shown in the figure counterclockwise.

- Threading end:

In this mode the Pinch Roller is placed in front of the Capstan Shaft, the T Base and S Base are in the positions of the T Support Bracket and S Support Bracket, and the Tension Regulator Arm is completely open.

This condition can be set by turning the screw shown in the figure clockwise.

2. Replace parts with the VTR installed onto the unit, unless otherwise specified. At that time, remove the cover of the Cassette-up Compartment. (Refer to Section 4-2.)
3. The polyslider washers used to fix parts should not be used again once they have been removed. Use a new one after replacement.
When installing a polyslider washer to the shaft, push the polyslider washer until the space between it and the part is about 0.1 to 0.2mm.
1.2mm diameter polyslider washer:
3-559-408-11
1.5mm diameter polyslider washer:
3-321-813-01
4. When tightening screws, be sure to keep the tightening torque. The torque driver and bits are provided.
J-6325-400-A Torque driver (for 0.3N·m)
J-6325-110-A Torque driver bit (for M1.4)
J-6325-380-A Torque driver bit (for M2)

Tightening torque

1.4mm dia.screw: $0.09 \pm 0.01 \text{ N}\cdot\text{m}$ ($0.9 \pm 0.1 \text{ kg}\cdot\text{cm}$)

2mm dia.screw: $0.3 \pm 0.05 \text{ N}\cdot\text{m}$ ($3.0 \pm 0.5 \text{ kg}\cdot\text{cm}$)

4-2. REPLACEMENT OF CASSETTE-UP COMPARTMENT

Mode: EJECT

Replacement procedure:

1. Loosen the screw shown in the figure and remove the cover of the Cassette-up Compartment.

(Note) The AU Board is attached to the cover of the Cassette-up Compartment and the two flexible cables are connected to this AU Board. Be careful not to damage them.

2. Remove the four screws attaching the Cassette-up Compartment, move the compartment in the direction of the arrow and remove it.
3. Attach the new Cassette-up Compartment in the reverse order of steps 1 and 2.
4. Close the cover of the Cassette-up Compartment and check that the top panel descends smoothly.

4-3. REPLACEMENT OF THE DRUM ASSEMBLY

Tool: Tweezers

Mode: EJECT

Replacement procedure:

1. Disconnect the flexible board (FL-54 Board) of the Slip Ring which is connected to CN28 on the MB-552 Board with a pair of tweezers. (Refer to Section 2-13.)
2. Remove the two fixing screws of the Drum Assembly and remove the Drum Assembly from the unit. When removing, raise the Drum Assembly straightly up because the connectors at the bottom of the drum are inserted in CN650 and CN651 of the DR-254 Board.
3. Install the new Drum Assembly in the unit so that the Slant Table Pin is inserted into the hole of the new Drum Assembly.
4. Push the Drum Assembly against the direction of arrow so that the Drum Assembly is free of play and tighten the fixing screw at the Reel Table side. Then, tighten the fixing screw at the CTL Head side.
5. Insert and lock the flexible board (FL-54 Board) of the Slip Ring into connector CN28 on the MB-552 Board with tweezers. (Refer to Section 2-13.)
6. After replacement, perform the adjustments in Section 4-39.

4-4. REPLACEMENT OF THE UPPER DRUM ASSEMBLY

- When replacing the Upper Drum Assembly, be careful not to touch the Video Head.

Tool: Flatness check tool

Drum eccentricity gauge (3)

Drum eccentricity gauge (2)

Drum eccentricity gauge (6)

Tweezers

L-shaped hexagonal wrench (across flat has 1.5mm)

Mode: EJECT

Replacement procedure:

1. Remove the Drum Assembly from the unit as described in Steps 1 and 2 in Section 4-3.
2. Install the Drum Assembly on the flatness check tool.
3. Remove the two brush base fixing screws and remove the Brush Assembly from the Drum Assembly.
4. Disconnect the twelve lead wires soldered onto the SBX Board.
5. Remove the Slip Ring Assembly from the removed Upper Drum Assembly as described in Section 4-5.
6. Remove the two hexagonal headed screws from the Upper Drum Assembly with the L-shaped hexagonal wrench, then remove the Upper Drum Assembly from the Drum Assembly.
7. Pass the eight lead wires from the flange through the upper drum assembly and place the new upper drum assembly on the flange. The red lead wire should face the direction shown in the figure.
8. Thread the hexagonal headed screws on the new Upper Drum Assembly to the flange snugly but do not tighten.

9. Assemble the drum eccentricity gauges 3, 2, 6, and install them on the flatness check tool.
10. Adjust the position of gauge so that the tip probe is positioned at the point about 2mm from the top edge of the Upper Drum.
11. Turn the Upper Drum Assembly slowly clockwise and confirm that the pointer deflection of the gauge is within 3 microns during one complete turn.
If the specification is satisfied, perform Step 13 and later. If not, perform Step 12 and later.
12. To satisfy the specification, adjust the position of the upper drum assembly by moving it manually.
13. After adjustment, alternately tighten the two hexagonal headed screws.
14. Confirm that the specification is satisfied once again.
15. Solder the eight lead wires from the flange to the SBX board.
16. Install the Slip Ring Assembly removed in Step 5 as described in Section 4-5.
17. Install the Brush Assembly.
18. Perform the Brush Position Adjustment in Section 6-16-1.
19. Remove the Drum Assembly from the flatness check tool.
20. Perform steps 3 through 6 in Section 4-3.

4-5. REPLACEMENT OF THE SLIP RING ASSEMBLY

Tool: Tweezers

Mode: EJECT

Replacement procedure:

1. Disconnect the flexible board (FL-54 Board) of the Slip Ring which is connected to CN28 on the MB-552 Board with a pair of tweezers. (Refer to Section 2-13.)
2. Remove the two brush base fixing screws and remove the Brush Assembly from the unit.
3. Desolder the four lead wires of the Slip Ring from the SBX Board of the Upper Drum Assembly.
4. Remove the two screws of the Slip Ring, then remove the Slip Ring from the unit.
5. Arrange the black and white lead wires of the new Slip Ring so that they are facing the side of the SBX Board with the silk screen printed "1", and put on the Drum Assembly.
6. Install the Slip Ring onto the Drum Assembly with the two screws.
7. Solder the four lead wires on the SBX Board as shown in the figure.
8. Install the Brush Assembly.
9. Perform the Brush Position Adjustment in Section 6-16-1.
10. Install and lock the flexible board (FL-54 Board) of the Slip Ring into CN28 on the MB-552 Board with tweezers. (Refer to Section 2-13.)

4-6. REPLACEMENT OF THE TAKE-UP SIDE REEL TABLE

Mode: EJECT

Replacement:

1. Remove the Brake Slider referring to Section 4-14.
2. Remove the polyslider washer at the top of the T Reel Table.
3. Release the pressures of the T Sub Soft Brake and T Soft Brake from the T Reel Table while pressing them in the direction of the arrows, and remove the T Reel Table from the unit.
4. Clean the reel shaft with a cleaning piece moistened with cleaning fluid.
5. Clean the Rotation Detection Sheet surface of the new T Reel Table and the reel table's outer circumference with a cleaning piece moistened with cleaning fluid.
6. Release the T Sub Soft Brake and T Soft Brake as in Step 3, insert the T Reel Table onto the Reel Shaft, and fasten it with the 1.2mm diameter polyslider washer.
7. While releasing the T Sub Soft Brake, rotate the T Reel Table by hand to check that it rotates smoothly.
8. Install the Brake Slider referring to Section 4-14.
9. After replacement, while releasing the T Soft Brake and T Sub Soft Brake, rotate the T Reel Table, and check that it rotates smoothly.

4-7. REPLACEMENT OF THE SUPPLY SIDE REEL TABLE

Mode: EJECT

Replacement procedure:

1. Remove the polyslider washer (shown in the figure) fixing the Tension Regulator Band.
2. Remove the polyslider washer at the top of the S Reel Table.
3. Release the pressure of the S Soft Brake from the S Reel Table while pressing it in the direction of the arrow, and remove the S Reel Table from the unit.
4. Clean the reel shaft with a cleaning piece moistened with cleaning fluid.
5. Clean the Rotation Detection Sheet surface of the a new S Reel Table and the reel table's outer circumference with a cleaning piece moistened with cleaning fluid.
6. Release the S Soft Brake as in Step 3, insert the S Reel Table onto the reel shaft, and fasten it with the 2mm diameter polyslider washer and the 1.2mm diameter polyslider washer.
7. Insert the Tension Regulator Band onto the shaft of the Band Support B Assembly and fasten it with the 1.2mm diameter polyslider washer.
8. After replacement, while releasing the S Soft Brake, rotate the S Reel Table by hand to check that it rotates smoothly.
9. After replacement, perform the adjustments in Section 4-39.

4-8. REPLACEMENT OF THE TAKE-UP SIDE DRIVING GEAR

Tool: 1.5mm diameter rod

Mode: EJECT

Replacement procedure:

1. Remove the SS-57 Board. (Refer to Section 2-11-7.)
2. Remove the shield plate. (Refer to Section 4-36.)
3. Remove a fixing screw of the T Gear Bracket and remove the T Gear Bracket and T Driving Gear from the back of the Mechanical Deck Block.
4. Clean the T Driving Gear Shaft with a cleaning piece moistened with cleaning fluid.
5. Apply a half drop of Sony oil on the above shaft. (One drop of Sony oil is about amount that remains on the tip of 2mm diameter rod dipped in oil.)
6. Align the three holes (1.5mm dia.) of the Threading Ring (take-up side), Threading Ring (supply side), and Slant Table, then pass a rod (1.5mm dia.) through the holes.
7. Insert the T Driving Gear onto the shaft so that the positional relationship between the T Driving Gear hole and Cam Gear Shaft are aligned as shown in the detail figure.
8. Install the T Gear Bracket with a fixing screw.
9. Repeat threading and unthreading two or three times and check that they can be done smoothly.

4-9. REPLACEMENT OF THE SUPPLY SIDE DRIVING GEAR

Tool: 1.5mm diameter rod

Mode: EJECT

Replacement procedure:

1. Remove the SS-57 Board. (Refer to Section 2-11-7.)
2. Remove the shield plate. (Refer to Section 4-36.)
3. Remove the two fixing screws of the Gear Reinforcement, and then remove the Gear Reinforcement, S Driving Midway Gear, and S Driving Gear from the back of the Mechanical Deck Block.
4. Clean the S Driving Midway Gear and S Driving Gear Shafts with a cleaning piece moistened with cleaning fluid.
5. Apply a half drop of Sony oil on the above two shafts.
6. Align the three holes (1.5mm dia.) of the Threading Ring (take-up side), Threading Ring (supply side), and Slant Table, then pass one rod (1.5mm dia.) through the holes.
7. Insert the S Driving Gear onto the shaft so that the positional relationship between the S Driving Gear hole and Threading Ring (supply side) hole are aligned as shown in the detail figure.
8. Insert the S Driving Midway Gear and install the Gear Reinforcement with two fixing screws.
9. Repeat threading and unthreading two or three times and check that they can be done smoothly.

4-10. REPLACEMENT OF THE GEAR ASSEMBLY

Mode: EJECT

Replacement procedure:

1. Remove the polyslider washer at the top of the Gear Assembly.
2. Clean the shaft of the Gear Assembly with a cleaning piece moistened with cleaning fluid.
3. Insert the new Gear Assembly onto the shaft, push a polyslider washer onto the shaft, and fasten the Gear Assembly.
4. Perform the PLAY, FF, and REW operations two or three times and check that they can be done smoothly.
5. After replacement, perform the Gear Assembly Position Adjustment in Section 5-1.

4-11. REPLACEMENT OF THE SUPPLY/TAKE-UP SIDE IDLER

- Since the S and T Idlers are replaced in the same manner, only replacement of the S Idler is described below.

Mode: EJECT

Replacement procedure:

1. Remove the polyslider washer and remove the S Side Idler from the unit.
2. Clean the Reel Shaft with a cleaning piece moistened with cleaning fluid.
3. Apply an 1/4 drop of Sony oil on the shaft.
4. As shown in the figure, install the S Idler in the unit with the S Idler surface's three dents faced to the reel chassis.
5. Fasten the S Idler with the 1.2mm diameter polyslider washer.

4-12. REPLACEMENT OF THE TENSION REGULATOR BAND

- When replacing the Tension Regulator Band, be careful not to touch or bend the band felt portion.

Tool: Tweezers

Mode: Threading end

Replacement procedure:

1. Put the unit into the threading end mode.
(Refer to Section 4-1.)
2. Remove the polyslider washer shown in the figure.
3. Push the Arm Hook of the Tension Regulator Band in the opposite direction of the arrow B.
4. Insert tweezers into the hole of the Tension Regulator Arm shown in the figure, and hold the hook and push it in the direction of the arrow C, then remove the Tension Regulator Band.
5. Insert the hook of a new Tension Regulator Band into the lower portion of the Tension Arm in the direction indicated by the figure and push the hook in the opposite direction of the arrow C to lock it to the pin.
6. Pull the hook of the Tension Regulator band in the direction of the arrow B.
7. Taking care not to bend the Tension Regulator Band, wind it around the S Reel.
8. Insert another hook of the Tension Regulator Band onto the shaft of the Band Support B Assembly and fasten it with 1.2mm diameter polyslider washer onto the shaft.
9. After replacement, perform the adjustments in Section 4-39.

4-13. REPLACEMENT OF THE TENSION REGULATOR

- When replacing the Tension Regulator, remove the Tension Regulator Band from the unit. Be careful not to touch or bend the band felt portion.

Mode: EJECT

Replacement procedure:

1. Remove the polyslider washer fixing the Tension Regulator Band.
2. Remove the spring shown in the figure from the S Tension Regulator Spring Bracket.
3. Remove the two fixing screws of the Tension Regulator and remove the Tension Regulator from the unit.
4. Remove the spring (removed in Step 2) from the removed Tension Regulator and install it on the new Tension Regulator in the direction as shown in the figure.
5. Remove the Tension Regulator Band from the removed Tension Regulator and install it on the new Tension Regulator in the direction shown in the figure. After installation, pull the band in the direction of the arrow B.
6. Align the hole of the Tension Regulator Driving Bracket with the reel chassis hole.
7. Insert the Tension Regulator Boss into the reel chassis hole. Adjust the Tension Regulator position so that the Driving Bracket Shaft is inserted into the illustrated hole of the Tension Regulator.
8. Install the Tension Regulator with the two screws.
9. Install the spring (removed in Step 2) on the S Tension Regulator Spring bracket in the direction as shown in the figure.
10. Being careful not to bend the Tension Regulator Band, wind it around the S Reel.
11. Insert the other hook of the band onto the shaft of the Band Support B Assembly and insert the 1.2mm diameter polyslider washer onto the shaft.
12. After replacement, perform the adjustments in Section 4-39.

4-14. REPLACEMENT OF THE MAIN BRAKE SHOE

Mode: EJECT

Replacement procedure:

1. Remove the T or S Brake Shoe Rubber.
2. Install the new Brake Shoe Rubber.

4-15. REPLACEMENT OF THE TAKE-UP SIDE SOFT BRAKE

Mode: EJECT

Replacement procedure:

1. Remove the spring from the Pinch Arm Lock Lever which is hooked to the T Soft Brake.
2. Remove the polyslider washer and remove the T Soft Brake from the unit.
3. Install the T Soft Brake to the unit so that the projection of the new T Soft Brake is positioned to the * marked portion of the Brake Slider Assembly, insert the 1.2mm diameter polyslider washer onto the shaft, and fasten the T Soft Brake.
4. Hook the spring of the Pinch Arm Lock Lever to the T Soft Brake.

4-16. REPLACEMENT OF THE TAKE-UP SIDE SUB SOFT BRAKE

Mode: EJECT

Replacement procedure:

1. Remove the spring from the Pinch Arm Lock Lever which is hooked to the T Soft Brake.
2. Remove the spring from the Cassette Detection Pin which is hooked to the Pinch Arm Lock Lever.
3. Remove the polyslider washer fixing the Pinch Arm Lock Lever and remove the Lock Lever from the unit.
4. Remove the spring from the T Sub Soft Brake which is hooked on hole C of the Pinch Arm Lock Lever.
5. Remove the spring from the T Sub Soft Brake and hook it on the new T Sub Soft Brake in the direction as shown in the figure.
6. Insert the T Sub Soft Brake onto the shaft of the Pinch Arm Lock Lever and hook the spring as shown in the figure.
7. Install the Pinch Arm Lock Lever on the unit so that the projection of the Pinch Arm Lock Lever is inserted into the Square hole of the reel chassis, the T Sub Soft Brake Shoe touches the reel table, and the Pinch Arm Roller is inserted into the longitudinal hole of the Lock Lever.
8. Insert the 1.2mm diameter polyslider washer onto the shaft and fasten the Lock Lever.
9. Hook the spring which is removed in Steps 1 and 2.

4-17. REPLACEMENT OF THE SUPPLY SIDE SOFT BRAKE

Mode: EJECT

Replacement procedure:

1. Remove the polyslider washer (shown in the figure) fixing the Tension Regulator Band.
2. Remove the polyslider washer at the top of the S Reel Table.
3. Remove the S Reel Table from the unit while releasing the pressure against the S Soft Brake.
4. Remove the spring from the Miss REC Lever B hooked on the Band Support Lever.
5. Remove the polyslider washer shown in the figure and remove the Band Support Lever from the unit.
6. Remove the spring from the S Soft Brake.
7. Install the new S Soft Brake and hook the spring removed in Step 4 in the direction as shown in the figure.
8. Assemble the S Soft Brake by reversing the Steps 1 through 5.

4-18. REPLACEMENT OF THE COMPONENT PARTS OF TAKE-UP SIDE BASE

- Replacement of the TG-7 (guide roller) on the T Base differs from replacement of the other components.
- Refer to Section 4-18-1 for replacement the TG-7, and refer to Section 4-18-2 for other components.

4-18-1. Replacement of the TG-7

Tool: Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Loosen the setscrew at the top of the TG-7 with the tape guide adjustment screwdriver.
2. Remove the Upper Flange C.
3. Remove the TG-7 Roller Guide TG-7, the Lower flange A, and the compression spring.
4. Clean the TG-7 Guide Roller Shaft with a cleaning piece moistened with cleaning fluid.
5. Insert the compression spring removed in Step 3 onto the TG-7 Guide Roller Shaft.
6. Carefully insert the Lower Flange A and TG-7 Guide Roller onto the TG-7 Guide Roller Shaft in the direction as shown in the figure.
7. Install the Upper Flange C.
8. Tighten the setscrew at the top of the guide with the tape guide adjustment screwdriver.
9. After replacement, perform the adjustments in Section 4-39.

4-18-2. Replacement of the Component Parts of the Take-up Side Base

- For replacement of the TG-7 on the T Side Base, refer to Section 4-18-1.
- When replacing the components other than TG-7 on the T Side Base, remove the Drum from the unit once so as not to damage it.

Mode: Turn the screw shown in the figure so that the Take-up Side Base reaches the end of the Take-up Side Rail (I).

Replacement procedure:

1. Remove the Drum Assembly from the unit. (Refer to Section 4-3.)
2. Turn the screw and set the Take-up Side Base in the position described above.
3. Remove the Take-up Side Rail (I). (Refer to Section 4-31.)
4. Remove the polyslider washer fixing the Take-up Side Pull Plate and remove the Take-up Side Base from the unit.
5. Replace the faulty component which constitutes the Take-up Side Base.
6. Assemble the Take-up Side Base by reversing the Steps 1 through 4 .
7. After replacement, perform the adjustments in Section 4-39.

4-19. REPLACEMENT OF THE COMPONENT PARTS OF THE SUPPLY SIDE BASE

- Replacement of the S Sub Base, TG-4, TG-5, and IR-2 (impedance roller guide) on the S Base differs from replacement of the other components.
- Refer to Section 4-19-1 for TG-4, Section 4-19-2 for TG-5, Section 4-19-3 for IR-2, Section 4-19-4 for S Sub Base, and Section 4-19-5 for replacing the other components.

4-19-1. Replacement of the TG-4

Tool: Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Loosen the setscrew at the top of the TG-4 with the tape guide adjustment screwdriver.
2. Remove the Upper Flange C.
3. Remove the TG-4 Roller Guide, Lower Flange A, and the compression spring.
4. Clean the TG-4 Guide Roller Shaft with the cleaning piece moistened with cleaning fluid.
5. Insert the compression spring removed in Step 3 onto the TG-4 Guide Roller Shaft.
6. Carefully insert the Lower Flange A and TG-4 Roller Guide onto the TG-4 Guide Roller Shaft in the direction as shown in the figure.
7. Install the Upper Flange C, and adjust the position of the TG-4 Roller Guide so that the lower end of the Upper Flange of the TG-4 Guide Roller is about 0.5mm lower than the lower end of the IR-2 Guide Upper Flange.
8. Tighten the setscrew at the top of the guide using a tape guide adjustment screwdriver.
9. After replacement, perform the adjustments in Section 4-39.

4-19-2. Replacement of the TG-5

Tool: Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Loosen the setscrew at the top of TG-5 with the tape guide adjustment screwdriver.
2. Remove the Upper Flange C.
3. Remove the TG-5 Roller Guide, Lower Flange A, and the compression spring.
4. Clean the TG-5 Guide Roller Shaft with a cleaning piece moistened with cleaning fluid.
5. Insert the compression spring removed in Step 3 onto the TG-5 Guide Roller Shaft.
6. Carefully insert Lower Flange A and the TG-5 Roller Guide onto the TG-5 Guide Roller Shaft in the direction as shown in the figure.
7. Install the Upper Flange C, and adjust the position of the TG-5 Guide Roller so that the lower end of the Upper Flange is the same in height as the lower end of the IR-2 Guide Upper Flange as viewed.
8. Tighten the setscrew at the top of the guide with the tape guide adjustment screwdriver.
9. After replacement, perform the adjustments in Section 4-39.

4-19-3. Replacement of the IR-2 Guide (Impedance Roller Guide)

Tool: Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Loosen the setscrew at the top of the IR-2 Guide with the tape guide adjustment screwdriver.
2. Remove the IR Nut.
3. Remove the IR-2 Assembly, washer (1.4mm dia.), compression spring, and S Spacer from the IR-2 Guide Shaft.
4. Clean the IR-2 Guide Shaft with a cleaning piece moistened with cleaning fluid.
5. Install the S Spacer, compression spring, and washer (1.4mm dia.) removed in Step 3 onto the IR-2 Guide Shaft.
6. Carefully insert the new IR-2 Assembly onto the IR-2 Guide Shaft.
7. Install the IR Nut, and adjust the position of the IR-2 Guide so that the lower end of the IR-2 Guide Upper Flange is about 0.5mm higher than the lower end of the TG-5 Guide Upper Flange.
8. Tighten the setscrew at the top of the guide with the tape guide adjustment screwdriver.
9. After replacement, perform the adjustments in Section 4-39.

4-19-4. Replacement of the Supply Side Sub Base

- The TG-4 and IR-2 Guides are provided on the S Sub Base. When replacing the S Sub Base, replace the TG-4 and IR-2 Guides referring to Sections 4-19-1 and 4-19-3. Then, adjust the height with the TG-5 Guide as reference.

Tool: Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Remove the polyslider washer at the top of the S Sub Base.
2. Remove the spacer, compression spring, S Sub Base on which TG-4 and IR-2 Guide are installed, and S Sub Fixing Spring.
3. Clean the new S Sub Base TG-4 Guide Shaft and IR-2 Guide Shaft with a cleaning piece moistened with cleaning fluid.
4. Remove the TG-4 Guide Roller and IR-2 Impedance Roller from the S Sub Base removed in Step 2 and install them on the new S Sub Base.
5. Clean the S Sub Base Support Shaft with a cleaning piece moistened with cleaning fluid.
6. Insert the S Sub Fixing Spring, S Sub Base (assembled in Step 4), compression spring, and spacer onto the S Sub Base Support Shaft.
7. Hook the S Sub Fixing Spring as shown in the figure.
8. Insert the polyslider washer (1.5mm dia.) onto the top of the S Sub Base Shaft and fasten the S Sub Base.
9. Adjust the height of the TG-4 and IR-2 Guides with the TG-5 Guide as reference. (Refer to Sections 4-19-1 and 4-19-3).
10. After replacement, perform the adjustments in Section 4-39.

4-19-5. Replacement of the Component Parts of the Supply Side Base

- Refer to the appropriate section for replacing the TG-4, TG-5, and IR-2 Guides on the S Base.
- When replacing the components other than the above components on the S Base, remove the Drum Assembly from the unit so as not to damage it.

Mode: Turn the screw shown in the figure so that the S Side base reaches the end of the S Side rail.

Replacement procedure:

1. Remove the Drum Assembly from the unit. (Refer to Section 4-3).
2. Turn the screw and set the S Side Base in the position described above.
3. Remove the S Side Rail (I). (Refer to Section 4-29).
4. Remove the polyslider washer fixing the Supply Side Pull Plate and remove the S Side Base from the unit.
5. Replace the faulty component which constitutes the S Side base.
6. Assemble the S Side Base by reversing the Steps 1 through 4 .
7. After replacement, perform the adjustments in Section 4-39.

4-20. REPLACEMENT OF THE CTL HEAD BLOCK

- The CTL Head Block consists of the CTL Head, Erase Head, FE-18 Board, IR-1 Guide (impedance roller guide), and tape guide. Replacement of the above components is described below.
- When replacing the CTL Head, Erase Head, and FE-18 Board, remove the CTL Head Block from the unit. The removal and installation are described below.

Mode: EJECT

Removal and installation:

- Remove the shield plate and the DR-254 board from the unit as shown in the figure.
- Remove the two fixing screws of the CTL Head Block and remove the CTL Head Block from the unit.
- Install the CTL Head Block on the chassis with the two screws so that the two pins of the chassis are inserted into the CTL Head Block holes.

(Note) • The connector of the FE-18 Board should be inserted in the connector of the DR-254 Board properly.

- If the connector is not inserted properly, the "HUMID" indicator will appear on the display window, the condensation sensor will work, and the unit will stop its operation.
- Install the shield plate and the DR-254 board.

4-20-1. Replacement of the CTL Head

Mode: EJECT

Replacement procedure:

1. Remove the shield plate and the DR-254 board from the unit. (Refer to Section 4-20.)
2. Remove the CTL Head Block from the unit.
3. Unsolder the two lead wires which are mounted onto the CTL Head.
4. Remove the two screws of the CTL Head Arm and remove the CTL Head.
5. Install the new CTL Head to the CTL Head Arm with two screws snugly but do not tighten.
6. Adjust the CTL Head position so that the surface of the CTL Head Bracket's upper end (portion A in the figure) is the same plane as that of the CTL Head Arm's upper end (portion B), and the CTL Head Bracket's lower end (portion C) is shifted by 0.1 mm with respect to CTL Head Arm's lower end (portion D) as shown in the figure. Then, tighten the two fixing screws.
(Tightening torque: $0.3 \pm 0.05 \text{ N} \cdot \text{m}$ ($3 \pm 0.5 \text{ kg} \cdot \text{cm}$))
7. Solder the two lead wires removed in Step 2.
8. Install the CTL Head Block on the unit.
(Note) • The connector of the FE-18 Board should be inserted in the connector of the DR-254 Board properly.
• If the connector is not inserted properly, "HUMID" indicator will appear on the display window, the condensation sensor will work, and the unit will stop its operation.
9. Install the shield plate and the DR-254 board.
10. After replacement, perform the adjustments in Section 4-39.

4-20-2. Replacement of the Erase Head

Mode: EJECT

Replacement procedure:

1. Remove the shield plate and the DR-254 board from the unit. (Refer to 4-20).
2. Remove the CTL Head Block from the unit.
3. Remove a screw from the lower side of the CTL Head Block and remove the Erase Head.
4. Unsolder the two lead wires of the Erase Head.
5. Solder two lead wires onto the new Erase Head. (When viewed from the back of the head, the two orange lead wires should not cross each other.)
6. Insert the two projections at the lower portion of the head into the holes of the CTL Head Base, and tighten the fixing screw while pushing it in the direction of the arrow.
7. Install the CTL Head Block on the unit.
(Note) • The connector of the FE-18 Board should be inserted in the connector of the DR-254 Board properly.
• If the connector is not inserted properly, "HUMID" indicator will appear on the display window, the condensation sensor will work, and the unit will stop its operation.
8. Install the shield plate and the DR-254 board.
9. After replacement, perform the adjustment in Section 4-39.

4-20-3. Replacement of the FE-18 Board

Mode: EJECT

Replacement procedure:

1. Remove the shield plate and the DR-254 board from the unit. (Refer to Section 4-20.)
2. Remove the CTL Head Block from the unit.
3. Remove the condensation sensor which is attached to the CTL Head Base.
4. Remove the two screws from the lower side of the CTL Head Block and remove the FE-18 Board. The FE-4 Holder Spacers are inserted between the FE Holder and screw be sure not to lose them.
5. Unsolder the four lead wires on the FE-18 Board. Unsolder the two lead wires of the condensation sensor which was removed in Step 2.
6. Solder the lead wire removed in Step 4 onto the new FE-18 Board. (The brown lead wire is soldered to 1, the red to 2, the two orange to 3.3, and the condensation sensors to 8.8)
7. Install the condensation sensor removed in Step 2 as shown in the figure so that it does not touch the boss of the base.
8. Pass the FE-4 Holder Spacer through the screw in the direction as shown in the figure and install the FE-4 Board on the CTL Head Base.
9. Check that the FE-18 Board is slightly shifted in the direction of the arrows A and B.
10. Install the CTL Head Block on the unit.
(Note) • The connector of the FE-18 Board should be inserted in the connector of the DR-254 Board properly.
• If the connector is not inserted properly, "HUMID" indicator will appear on the display window, the condensation sensor will work, and the unit will stop its operation.
11. Install the shield plate and the DR-254 board.
12. After replacement, perform the adjustment in Section 4-39.

4-20-4. Replacement of the IR-1 Guide (Impedance Roller Guide)

Tool: Thickness gauge

Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Measure the clearance between the lower surface of the IR-1 Guide's Upper Flange and Erase Head with the thickness gauge. (The clearance should be memorized.)
2. Loosen the setscrew at the top of the IR-1 Guide with the tape guide adjustment screwdriver.
3. Remove the IR Nut.
4. Remove the IR-1 Assembly, washer (1.4mm dia.), and compression spring from the IR-1 Guide Shaft.
5. Clean the IR-1 Guide Shaft with a cleaning piece moistened with cleaning fluid.
6. Install the compression spring and washer (1.4mm dia.) remove in Step 4 onto the IR-1 Guide Shaft.
7. Carefully insert the new IR-1 Assembly onto the IR-1 Guide Shaft.
8. Install the IR Nut.
9. Adjust the height of the IR-1 Guide using the IR Nut so that the clearance between the lower surface of the IR-1 Guide's Upper Flange and the Erase Head is the same as the clearance measured in Step 1.
10. Tighten the setscrew at the top of the guide with the tape guide adjustment screwdriver.
11. Recheck the clearance between the lower surface of the IR-1 Guide's Upper Flange and the Erase Head. When the clearance does not meet the required specification, repeat Steps 9 and 10.
12. After replacement, perform the adjustment in Section 4-39.

4-21. REPLACEMENT OF THE TG-1

Tool: Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Loosen the setscrew at the top of the TG-1 with the tape guide adjustment screwdriver.
To ensure that the Upper Flange C does not change the position, turn the setscrew again until its bottom reaches the top of the TG-1 guide shaft. At this time, be careful not to tighten up the setscrew.
2. Remove the Upper Flange C in the counterclockwise direction.
3. Remove the TG-1 Roller Guide, Lower Flange A, and the compression spring.
4. Clean the TG-1 Guide Shaft with a cleaning piece moistened with cleaning fluid.
5. Insert the compression spring removed in Step 3 onto the TG-1 Guide Shaft.
6. Carefully insert the Lower Flange A and the TG-1 Roller Guide onto the TG-1 Guide Shaft in the direction as shown in the figure.
7. Attach the Upper Flange C with the setscrew on to the TG-1 guide shaft.
8. Tighten the setscrew at the top of the guide with the tape guide adjustment screwdriver.
9. After replacement, perform the adjustment in Section 4-39.

4-22. REPLACEMENT OF THE A/T HEAD

- When replacing the A/T Head, be careful not to loosen or tighten the azimuth adjustment screw and zenith adjustment screw shown in the figure.

Tool: Plate parallel
Thickness gauge
Tweezers
Flatness check tool

Mode: EJECT

Replacement procedure:

1. Remove the flexible board (FL-160 Board) of the A/T Head Block which is connected to connector CN2 of the AU-185 Board and connector CN306 of the SS-57 Board with the tweezers. (Refer to Section 2-13).
2. Remove the three fixing screws of the A/T Head Block and remove the A/T Head Block from the unit. Be careful not to damage the flexible board (FL-160 Board).
3. Unsolder the six terminals of the FL-160 Board soldered to the A/T Head and remove the FL-160 Board from the A/T Head Block.
4. Remove the two screws and one nut shown in the figure, then remove the A/T Head Unit from the A/T Head Block.

5. Remove the screw located in the center of the A/T Head Unit and remove the A/T Head Unit Sub Assembly from the A/T Plate (Upper) Assembly.
6. As shown in the figure, put the flatness plate on the flatness check tool and place the A/T Head Unit Sub Assembly (removed in Step 5) on it.
7. Check the clearance between the flatness check tool and the edge of the A/T Plate (Lower) with the thickness gauge.
8. Remove the two screws shown in the figure, remove the A/T Head and A/T Shield Case from the A/T Plate (Lower), and replace the new A/T Head. Thread the two screws on the head snugly but do not tighten.
9. Put the A/T Head Unit Sub Assembly on the flatness check tool as in Step 6 and insert the thickness gauge checked in Step 7 between the A/T Plate (Lower) and flatness check tool.

10. Push the A/T Head and A/T Plate (Lower) towards the flatness check tool, then push only the A/T Head in the clockwise direction further, and tighten the two A/T Head fixing screws.
11. Install the A/T Head Unit Sub Assembly on the A/T Plate (Upper) Assembly by reversing the Step 5. Check that the pin of the A/T Plate (Upper) Assembly is inserted into the hole of the A/T Plate (Lower).
12. Install the A/T Head Unit on the A/T Base Assembly. As shown in the figure, adjust the nut so that clearance A (See next page) between the tip of the A/T Auxiliary Shaft and A/T Plate (Upper) Assembly meets the required specification as viewed.
13. Assemble the A/T Head Block in the unit by reversing the Steps 1 through 3.
14. After replacement, perform the adjustment in Section 4-39.

4-23. REPLACEMENT OF THE IR-11 GUIDE

Tool: Thickness gauge

Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Measure the clearance between the lower surface of an IR-11 guide and the base side with the thickness gauge.
Measure at the * part of the base.
(The clearance should be memorized.)
2. Loosen the setscrew at the top of the IR-11 Guide with the tape guide adjustment screwdriver.
3. Remove the IR nut.
4. Remove an IR-11 guide, washer (1.4mm dia.), and compression spring from the roller support shaft.
5. Clean the roller support shaft with a cleaning piece moistened with cleaning fluid.
6. Install the compression spring and washer (1.4mm dia.) removed in Step 4 onto the roller support shaft.
7. Carefully insert the new IR-11 guide onto the roller support shaft.
8. Install the IR Nut.
9. Adjust the height of the IR-11 Guide using the IR Nut so that the clearance between the lower surface of the IR-11 Guide and the base side is the same as the clearance measured in Step 1.
10. Tighten the setscrew at the top of the guide with the tape guide adjustment screwdriver.
11. Recheck the clearance between the lower surface of the IR-11 Guide and the base side. When the clearance does not meet the required specification, repeat Steps 9 and 10.
12. After replacement, perform the adjustments in Section 4-39.

4-24. REPLACEMENT OF THE TG-10

Tool: Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Loosen the setscrew at the top of the TG-10 with the tape guide adjustment screwdriver.
To ensure that the Upper Flange C does not change the position, turn the setscrew again until its bottom reaches the top of the TG-10 guide shaft.
At this time, be careful not to tighten up the setscrew.
2. Remove the Upper Flange C.
3. Remove the Roller Assembly, Lower Flange A, and the compression spring.
4. Clean the TG-10 Guide Shaft with a cleaning piece moistened with cleaning fluid.
5. Insert the compression spring removed in Step 3 onto the TG-5 Guide Shaft.
6. Carefully insert the Lower Flange A and the Roller Assembly onto TG-10 Guide Shaft in the direction shown in the figure.
7. Attach the Upper Flange C with the setscrew on to the TG-10 guide shaft.
8. Tighten the setscrew at the top of the guide with the tape guide adjustment screwdriver.
9. After replacement, perform the adjustments in Section 4-39.

4-25. REPLACEMENT OF THE COMPONENT PARTS OF THE TAKE-UP SIDE SUB BASE

- The T Sub Base Block consists of the TG-8 and the Slant Guide. Replacement of the above components is described below.
- When replacing the above components, remove the A/T Head Block from the unit. The removal and installation procedures are described below.

Tool: Tweezers

Mode: EJECT

Removal and installation Procedures:

- Remove the flexible board (FL-160 Board) of the A/T Head Block which is connected to connector CN2 of the AU-185 Board and connector CN306 of the SS-57 Board with the tweezers. (Refer to Section 2-13.)
- Remove the three fixing screws of the A/T Head Block and remove the A/T Head Block from the unit. Be careful not to damage the flexible board (FL-160 Board) and A/T Head.
- Install by reversing the above.
- When replacing the component of the T Sub Base, not to remove the frame of the T Sub Base (T Sub Rotation Table) and T Sub Adjustment Plate from the unit.

4-25-1. Replacement of the TG-8

- TG-8 is the component part of the T Sub Base Block.

Tool: L-shaped hexagonal wrench (across flat has 0.89mm.)

Tension gauge (50g full scale)

Mode: EJECT → Threading end→ EJECT

Replacement procedure:

1. Turn the screw clockwise until each of the tape guides are at position of the threading end as shown in the figure. Keep turning clockwise until the T Main Brake is pressed against the T Reel.
2. Remove the A/T Head Block from the unit.
3. Loosen the setscrew at the top of the T Sub Base by turning two or three times with the L-shaped hexagonal wrench.
4. Pull the T Sub Rotary Main Shaft Assembly to the A/T head side. Then, the T Sub Base Guide Unit can be removed.

5. Remove the polyslider washer from the top of the TG-8 Guide.
6. Remove the compression spring, Roller Flange A, Roller Assembly (TG-8), and Roller Flange B from the TG-8 Guide Shaft.
7. Clean the TG-8 Guide Shaft with a cleaning piece moistened with cleaning fluid.
8. Carefully insert the Roller Flange B, Roller Assembly (TG-8), and Roller Flange A onto the TG-8 Guide Shaft in the direction as shown in the figure.
9. Insert the compression spring onto the TG-8 Guide Shaft, then push the 1.2mm diameter polyslider washer on the shaft.
10. Install the assembled T Sub Base Guide Unit onto the T Sub Rotary Table with the T Sub Rotary Table with the T Sub Rotary Main Shaft assembly. (Do not tighten the setscrew too much.)
11. Slowly turn the screws mentioned in Steps 1 counterclockwise until the T Sub Fixed Bracket touches the T Sub Rotary Table. (At that time, do not move the Driving Gear of the T Sub Rotary Table.)
12. Push the top edge of the TG-8 Guide Shaft onto the T Sub Rotary Table side (the opposite side to the drum).
13. Turn the screws clockwise until the T Main Brake is pressed against the T Reel Table as described in Step 1.
14. While pushing the Driving Gear in the direction of the arrow A and T Sub Rotary Main Shaft Assembly in the direction of the arrow B, tighten the setscrew.
15. Turn the screw described in Step 1 so that the top edge of the TG-8 is locked by the T Sub Fixed Bracket.
16. Reform the small paper clip as shown in the figure.
17. Insert the reformed paper clip into the hole of the T Sub Base Guide Unit and hang the tension gauge on the other end.
18. Move the tension gauge in the upward direction to the unit until it shows $40 \pm 5g$. (Never applied 50g or more.)
19. Turn the screw described in Step 1 clockwise, and check that the top edge of the TG-8 Guide is firmly locked by the T Sub Fixed Bracket. When threading or unthreading check that the TG-8 Guide Roller and the TG-7 Guide are not touching. If the specification is not satisfied, perform the Step 14 again. At that time, change the degree of pressure a little when pushing in the direction of arrow A.

4-25-2. Replacement of the Slant Guide

- The Slant Guide is the component part of the T Sub Base Block.

Tool: L-shaped hexagonal wrench (across flat has 0.89mm dia.)

Mode: EJECT → Threading end → EJECT

Replacement procedure:

1. The same as in Steps 1 through 5 of Section 4-25-1.
2. Remove the setscrew from the removed T Sub Base Assembly and install it on the new T Sub Base Assembly.
3. Clean the TG-8 Guide Shaft of the T Sub Base Assembly and Slant Guide with a cleaning piece moistened with cleaning fluid.
4. Assemble as described in Steps 8 through 19) of Section 4-25-1.
5. After replacement, perform the adjustments in Section 4-39.

4-26. REPLACEMENT OF THE PINCH ARM ASSEMBLY

Tool: Tweezers

Mode: EJECT

Replacement procedure:

1. Remove the Pinch Arm Lock Lever from the unit. (Refer to Section 4-16.)
2. Remove the polyslider washer fixing the Pinch Arm Assembly and remove the assembly from the unit.
3. Clean the Pinch Arm Shaft with a cleaning piece moistened with cleaning fluid.
4. Apply an 1/4 drop of Sony oil on the Pinch Arm Shaft.
5. Install the new Pinch Arm Assembly.
6. Insert the polyslider washer (1.2mm dia.) onto the shaft and fasten the Pinch Arm Assembly.
7. Install the Pinch Arm Lock Lever. (Refer to Section 4-16.)
8. After replacement, perform the adjustment in Section 4-39.

4-27. REPLACEMENT OF THE PINCH ROLLER SUB ASSEMBLY

- The TG-11 Guide is installed on the shaft of the Pinch Roller sub Assembly.
- When replacing the Pinch Roller Sub Assembly, the TG-11 Guide must be replaced at the same time.
(Refer to Section 4-28.)

Tool: Tweezers

Mode: EJECT

Replacement procedure:

1. Remove the polyslider washer fixing the Pinch Roller Sub Assembly onto the Pinch Arm Assembly.
2. Remove the Pinch Tape Guard and the Pinch Roller Sub Assembly from the unit.
3. Install the TG-11 Guide of the old Pinch Roller Sub Assembly onto the new Pinch Roller Sub Assembly as described in Section 4-28.
4. After installing the Pinch Roller Sub Assembly and the Pinch Tape Guard on the Pinch Arm Assembly, push a polyslider washer onto the shaft.
5. Clean the pinch roller with a cleaning piece moistened with cleaning fluid.
6. After replacing, perform the adjustment in Section 4-39.

4-28. REPLACEMENT OF THE TG-11

Tool: Tape guide adjustment screwdriver

Mode: EJECT

Replacement procedure:

1. Loosen the setscrew at the top of the TG-10 with the tape guide adjustment screwdriver.
To ensure that the Upper Flange C does not change the position, turn the setscrew again until its bottom reaches the top of the TG-11 guide shaft.
At this time, be careful not to tighten up the setscrew.
2. Remove the Upper Flange C.
3. Remove the TG-11 Roller Guide, Lower Flange A, and the compression spring.
4. Clean the TG-11 Guide Shaft with a cleaning piece moistened with cleaning fluid.
5. Insert the compression spring removed in Step 3 onto the TG-11 Shaft.
6. Carefully insert the Lower Flange A and the TG-11 Roller Guide onto the TG-11 Guide Shaft in the direction as shown in the figure.
7. Attach the Upper Flange C with the setscrew on to the TG-11 guide shaft.
8. Tighten the setscrew at the top of the guide with the tape guide adjustment screwdriver.
9. After replacement, perform the adjustment in Section 4-39.

4-29. REPLACEMENT OF THE SUPPLY SIDE RAIL (I)

Mode: EJECT

Replacement procedure:

1. Remove the Drum Assembly from the unit.
(Refer to Section 4-3.)
2. Remove the two screws on the S Rail (I) and remove it from the unit.
3. Install the new S Rail (I) on the unit so that the clearance between the new S Rail (I) and S Rail (O) is 3.1 to 3.4mm.
4. Repeat threading and unthreading two or three times and check that they can be done smoothly.
5. Install the Drum Assembly on the unit.
6. After replacement, perform the adjustments in Section 4-39.

4-30. REPLACEMENT OF THE SUPPLY SIDE RAIL (O)

Mode: EJECT

Replacement procedure:

1. Remove the two screws of the S Rail (O) and remove it from the unit.
2. Install a new S rail (O) on the unit so that the clearance between the new S Rail (O) and S Rail (I) is 3.1 to 3.4mm.
3. Repeat threading and unthreading two or three times and check that they can be done smoothly.

4-31. REPLACEMENT OF THE TAKE-UP SIDE RAIL (I)

Mode: Threading end

Replacement procedure:

1. Remove the Drum Assembly from the unit.
(Refer to Section 4-3.)
2. Remove a fixing screw on the T Rail (I) and remove it from the unit.
3. Install the new T Rail (I) so that its projection is inserted into the chassis hole and the clearance between the new T Rail (I) and T Rail (O) is 3.1mm to 3.5mm.
4. Repeat threading and unthreading two or three times and check that they can be done smoothly.
5. Install the Drum Assembly on the unit.
6. After replacement, perform the adjustments in Section 4-39.

4-32. REPLACEMENT OF THE TAKE-UP SIDE RAIL(O)

Mode: Threading end

Replacement procedure:

1. Remove the three fixing screws of the T Rail (O) and remove it.
2. Install the new T Rail (O) on the unit so that the clearance between the new T Rail (O) and T Rail (I) is 3.1 to 3.5mm.
3. Repeat threading and unthreading two or three times and check that they can be done smoothly.

4-33. REPLACEMENT OF THE LOADING MOTOR

- When replacing the Loading Motor, replacement of the Loading Motor Assembly is recommended.

Mode: EJECT

Replacement procedure:

1. Remove the connector for the leading motor attached to the CN305 on the SS-S7 board, and the connector for the tape-top sensor attached to the CN308.
2. Remove the three screws shown in the figure, then remove the Loading Motor Assembly from the unit.
3. After inserting the chassis pin into the hole of the new Loading Motor Assembly, install the Loading Motor Assembly, install the Loading Motor Assembly with the three fixing screws.
4. Assemble by reversing the Steps 1, 2 and 3 .

4-33-1. REPLACEMENT OF TAPE TOP SENSOR

The tape top sensor is a part of the loading motor assembly.

Mode: EJECT

Replacement procedure:

1. Remove the screw shown in the figure and remove the tape top sensor from the motor bracket.
2. Disconnect the connector of the harness (tape top) from CN308 of the SS-57 Board.
3. Remove the nylon rivet shown in the figure and remove the tape top sensor board from the tape top sensor base.
4. Pass the new harness (tape top) through part A of the tape top sensor base and attach it in the reverse order of steps 1, 2, and 3.

4-34. REPLACEMENT OF THE METAL DETECTION LEVER

Mode: EJECT

Replacement procedure:

1. Remove the Brake Slider referring to Section 4-14.
2. Remove a screw of the Metal Detection Lever and remove it from the unit.
3. Remove the polyslider washer of the Metal Detection Lever and replace it with a new one.
4. Install the Metal Detection Lever with the 1.2mm diameter polyslider washer.
5. Install the Metal Detection Lever on the chassis and fix it with the fixing screw so that portion A of the Metal Detection Lever is inserted into the longitudinal hole and the projection of the reel chassis is inserted into the hole of the Metal Detection Lever.
6. Install the Brake Slider referring to Section 4-14.

4-35. REPLACEMENT OF THE REEL SLIDER DRIVING GEAR

- When replacing this part, remove the Reel Chassis from the Mechanical Deck Block.
(Refer to Section 2-12.)

Tool: Sony grease
Sony oil

Mode: EJECT

Replacement procedure:

1. Remove the Reel Chassis. (Refer to Section 2-12.)
2. Remove the polyslider washer fixing the Reel Slider Driving Gear, then remove the Reel Slider Driving Gear and the polyslider washer (1.6mm dia.).
3. Clean the Gear Shaft with a cleaning piece moistened with cleaning fluid.
4. Install the polyslider washer (1.6mm dia.) on the shaft.
5. Apply an 1/4 drop of Sony oil on the shaft.
6. Smear a little Sony grease onto the groove of the new Reel Slider Driving Gear.
7. Move the Slider manually in the direction of the arrow until it stops.
8. Insert the Reel Slider Driving Gear into the shaft so that the pin of the S Tension Regulator Driving Arm Assembly is into the groove of the Driving Gear, and so that the positional relationship between the holes on the other gear and the slider plate and two holes of the Driving Gear as shown in the figure.
9. Push the polyslider washer (1.2mm dia.) onto the shaft and fasten the Reel Slider Driving Gear.
10. Install the Reel Chassis. (Refer to Section 2-12.)

4-36. REPLACEMENT OF THE TIMING BELT

Mode: EJECT

Replacement procedure:

1. Remove the SS-57 Board. (Refer to Section 2-11-7.)
2. Remove the five screws attaching the shield plate and remove the shield plate.
3. Remove the two screws attaching the capstan cover and remove the capstan cover.
4. Remove the Timing Belt.
5. Place the new Timing Belt on the Capstan Motor Pulley, the Intermediate Pulley, then on the Idler Pulley in that order.
6. Attach in the reverse order of steps 1, 2, and 3.
7. Adjust the tension of the timing belt. (Refer to Section 5-1.)

4-37. REPLACEMENT OF THE CAPSTAN MOTOR

Mode: EJECT

Replacement procedure:

1. Remove the SS-57 Board. (Refer to Section 2-11-7.)
2. Remove the shield plate and capstan cover. (Refer to Section 4-36.)
3. Remove the DR-254 Board. (Refer to Section 2-11-3.)
4. Remove the three screws attaching the SR-55 Board and open the SR-55 Board toward the flexible board side.
5. Remove the two fixing screws on the Capstan Motor, then remove the Capstan Motor from the unit.
6. Install the new Capstan Motor on the Mechanical Deck Block by reversing the Steps 1 through 5. (Note) It is recommended for easy installing that the tip of the flexible board makes flat.
7. Adjust the tension of the timing belt. (Refer to Section 5-1.)
8. Perform the compression lever position check. (Refer to Section 5-2.)
9. Perform the pinch compression lever position adjustment. (Refer to Section 5-3.)
10. Perform the tape threading/unthreading check. (Refer to Section 6-3.)
11. Perform the tape path check (near the pinch roller). (Refer to Section 6-5.)
12. Perform the tape path adjustment (PLAY mode). (Refer to Section 6-1.)
13. Perform the tape path check (FF, REW mode). (Refer to Section 6-2.)

THE UNIVERSITY OF CHICAGO PRESS

Replacement procedure:

-
- Diagram illustrating the assembly of the gear block. The gear block is shown being positioned and secured with screws into a frame.

4-39. ITEMS TO BE ADJUSTED AFTER THE MAIN PARTS REPLACEMENT (NUMBERS IN PARENTHESIS REFER TO SECTION NOS.)

Replacement of the Upper Drum Assembly

Brush Position Adjustment (6-16) → Tracking Adjustment (6-8) → Tape Path Adjustment (PLAY mode)(6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (6-9) → CTL Head Position Adjustment (6-10) → TC Head Position Adjustment (6-12) → Audio Head Height Adjustment (6-13) → TC Head Position Adjustment (check)(6-12) → Audio Head Phase Adjustment (6-14) → PB Switching Position Adjustment (6-15) → Video Alignment(11)

Replacement of the Drum Assembly

Tracking Adjustment (6-8) → Tape Path Adjustment (PLAY mode)(6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (6-9) → CTL Head Position Adjustment (6-10) → TC Head Position Adjustment (6-12) → Audio Head Height Adjustment (6-13) → TC Head Position Adjustment (check)(6-12) → Audio Head Phase Adjustment (6-14) → PB Switching Position Adjustment (6-15) → Servo Check (9) → Video Alignment (11)

Replacement of the S Reel Table

Tension Regulator Operating Position Adjustment (5-7) → PLAY Back Tension Adjustment (check)(6-4)

Replacement of the Tension Regulator Band

Tension Regulator Operating Position Adjustment (5-7) → PLAY Back Tension Adjustment (6-4)

Replacement of the Tension Regulator

Tension Regulator Operation Position Adjustment (5-7) → Tape Path Adjustment (PLAY mode)(6-1) → Tape Path Check (FF, REW mode)(6-2) → PLAY Back Tension Adjustment (6-4) → Tracking Adjustment (check)(6-8)

Replacement of the TG-7

Threading Position Check (Take-up side)(5-5) → Tape Threading/Unthreading Check (6-3) → Tape Path Adjustment (PLAY mode)(6-1) → Tape Path Check (FF, REW mode)(6-2) → Tracking Adjustment (check)(6-8)

Replacement of the Component Parts of the T Base

Threading Position Check (Take-up side)(5-5) → Tape Threading/Unthreading Check (6-3) → Tape Path Adjustment (PLAY mode)(6-1) → Tape Path Check (FF, REW mode)(6-2) → Tracking Adjustment (6-8) → Tape Path adjustment (PLAY mode)(check)(6-1) → Tape Path check (FF, REW mode)(6-2) → CTL Head Height Adjustment (check)(6-9) → CTL Head Position Adjustment (check)(6-10) → TC Head Position Adjustment (6-12) → Audio Head Height Adjustment (6-13) → TC Head Position Adjustment (check)(6-12) → Audio Head Phase Adjustment (6-14) → PB Switching Position Adjustment (6-15)

Replacement of the TG-4

Threading Position Check (Supply side)(5-4) → Tape Threading/Unthreading Check (6-3) → Tracking Adjustment (check)(6-8) → Tape Path Adjustment (PLAY mode) (check)(6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (check)(6-9)

Replacement of the TG-5

Threading Position Check (Supply side)(5-4) → Tape Threading/Unthreading check (6-3) → Tracking Adjustment (6-8) → Tape Path Adjustment (PLAY mode)(check) (6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (check)(6-9)

Replacement of the IR-2

Threading Position Check (Supply side)(5-4) → Impedance Roller Guide II Clearance Adjustment (5-6) → Tape Threading/Unthreading Check (6-3) → Tracking Adjustment (check)(6-8) → Tape Path Adjustment (PLAY mode)(check) (6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (check)(6-9)

Replacement of the S Sub base

Threading Position Check (Supply side)(5-4) → Impedance Roller Guide II Clearance Adjustment (5-6) → Tape Threading/Unthreading Check (6-3) → Tracking Adjustment (check)(6-8) → Tape Path Adjustment (PLAY mode)(check) (6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (check)(6-9) → CTL Head Position Adjustment (check)(6-10) → TC Head Position Adjustment (check)(6-12)

Replacement of the Component Parts of the S Base

Threading Position Check (Supply side)(5-4) → Impedance Roller Guide 2 Clearance Adjustment (check)(5-6) → Tape Threading/Unthreading Check (6-3) → Tracking Adjustment (check)(6-8) → Tape Path adjustment (PLAY mode)(check) (6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (6-9) → CTL Head Position Adjustment (6-10) → TC Head Position Adjustment (6-12) → Audio Head Height Adjustment (6-13) → TC Head Position Adjustment (check)(6-12) → Audio Head Phase Adjustment (6-14) → PB Switching Position Adjustment (6-15)

Replacement of the CTL Head

Tracking Adjustment (check)(6-8) → Tape Path Adjustment (PLAY mode)(check) (6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (6-9) → CTL Head Position Adjustment (6-10) → TC Head Position Adjustment (6-12)

Replacement of the Erase Head and the FE-18 Board

Tracking Adjustment (check)(6-8) → Tape Path Adjustment (PLAY mode)(check) (6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Position Adjustment (6-10) → TC Head Position Adjustment (6-12)

Replacement of the IR-1 Guide (Impedance Roller Guide), TG-1 Guide, IR-11 Guide, and the TG-10 Guide

Tape Path Adjustment (PLAY mode)(check)(6-1) → Tape Path Check (FF, REW mode) (6-2)

Replacement of the A/T Head

Audio Head Zenith Adjustment (6-11) → Tape Threading/Unthreading Check (6-3) → Tracking Adjustment (check)(6-8) → Tape Path Adjustment (PLAY mode)(check) (6-1) → Tape Path Check (FF, REW mode)(6-2) → Audio Head Height Adjustment (6-13) → Audio Head Phase Adjustment (6-14) → Audio Alignment (10)

Replacement of the TG-8 Guide and the Slant Guide

Tape Threading/Unthreading Check (6-3) → Tracking Adjustment (check)(6-8) → Tape Path Adjustment (PLAY mode)(check)(6-1) → Tape Path Check (FF, REW mode)(6-2) → Audio Head Height Adjustment (6-13) → Audio Head Phase Adjustment (6-14)

Replacement of the Pinch Arm Assembly and the Pinch Roller Sub assembly

Pinch Press Lever Position Adjustment (5-3) → Tape Threading/Unthreading Check (6-3) → Tape Path Check (Around the Pinch Roller)(6-5) → Tape Path Adjustment (PLAY mode)(6-1) → Tape Path Check (FF, REW mode)(6-2)

Replacement of the TG-11

Tape Threading/Unthreading Check (6-3) → Tape Path Check (Around the Pinch Roller)(6-5) → Tape Path Adjustment (PLAY mode)(6-1) → Tape Path Check (FF, REW mode)(6-2)

Replacement of the S Rail (I)

Threading Position Check (Supply side)(5-4) → Tape Threading/Unthreading Check (6-3) → Tracking Adjustment (check)(6-8) → Tape Path Adjustment (PLAY mode)(check)(6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (6-9) → CTL Head Position Adjustment (6-10) → TC Head Position Adjustment (6-12) → Audio Head Height Adjustment (6-13) → TC Head Position Adjustment (check)(6-12) → Audio Head Phase Adjustment (6-14) → PB Switching Position Adjustment (6-15)

Replacement of the T Rail (I)

Threading Position Check (Take-up side)(5-5) → Tape Threading/Unthreading Check (6-3) → Tracking Adjustment (check)(6-8) → Tape Path Adjustment (PLAY mode)(check)(6-1) → Tape Path Check (FF, REW mode)(6-2) → CTL Head Height Adjustment (6-9) → CTL Head Position Adjustment (6-10) → TC Head Position Adjustment (6-12) → Audio Head Height Adjustment (6-13) → TC Head Position Adjustment (check)(6-12) → Audio Head Phase Adjustment (6-14) → PB Switching Position Adjustment (6-15)

SECTION 5 LINK SYSTEM ALIGNMENT

(Preparations)

1. VTR's Mechanical Deck Block Adjustment

Adjust the VTR's mechanical deck block as follows.

1. Put the VTR into the threading end mode.
2. Remove the Top Panel.
3. Remove the Cassette-up Compartment Lid and install the Cassette Dummy Cover which is prepared for service.
4. Remove three screws (B3×4) and remove the Left Side Panel.

Precaution:

Be careful not to damage the flexible card since the lid is connected with the main unit by the flexible card.

2. Creating the Blank Cassette/Cassette Tape without Lid/Alignment Tape without Lid

Since the VTR is designed to compact size, some mechanical checks and adjustments cannot be performed when a cassette tape lid or cassette tape is installed. Remove the cassette tape lid or cassette tape as follows:

• Creating the blank cassette

1. Remove the four fixing screws on the back of a cassette tape and remove the upper half of the cassette tape as shown in the figure.
2. Remove the lock mechanism parts and the springs on the left and right.
3. Remove the cassette lid from the upper half.
4. Remove the cassette tape.
5. Install the upper half on the lower half with the four fixing screws from the back side.

• **Creating the Cassette Tape without Lid**

1. Remove the four fixing screws on the back of a cassette tape and remove the upper half of the cassette tape as shown in the figure.
2. Remove the lock mechanism parts and the springs on the left and right.
3. Remove the cassette lid from the upper half.
4. Install the upper half on the lower half with the four fixing screws from the back side.

• **Creating the Alignment Tape without Lid**

1. Remove the four fixing screws on the back of a cassette tape and remove the upper half of the alignment tape as shown in the figure.
2. Remove the lock mechanism lock parts and the springs on the left and right.
3. Remove the cassette lid from the upper half.
4. Install the upper half on the lower half with the four fixing screws from the back side.

5-1. GEAR ASSEMBLY POSITION ADJUSTMENT

Tool: Tension scale (50 g full scale)

Mode: Any mode is acceptable. (Put the unit into the threading mode.)

Check procedure:

1. Push the Timing Belt in the direction of the arrow with a tension scale as shown in the figure.
2. Check that the reading of the tension scale meets the required specification, when the clearance between the boss and the Timing Belt is about 0 mm.

Adjustment procedure:

1. Loosen the fixing screw of Gear Base Ass'y by one or two turns.
2. Insert a flatblade screwdriver into the notch as shown in the figure, and move the Gear Base Ass'y in the direction as follows:
 - When the reading of the tension scale is smaller than the required specification : in the direction of A
 - When the reading of the tension scale is bigger than the required specification : in the direction of B
3. Tighten the fixing screw of the Gear Base Ass'y.
4. Perform steps 1 and 2 . If the required specification is not satisfied, repeat the adjustment procedures 1 to 4 .

5-2. PRESS LEVER POSITION CHECK

Tool: Blank cassette tape

Wire clearance gauge (0.1mm)

Setting: Remove the Cassette-up Compartment from the mechanical deck.

Mode: Play back the blank cassette tape and turn off the POWER switch.

Check procedure:

1. Insert the blank cassette tape, put the unit into the PLAY mode, then turn off the POWER switch.
2. When Pushing the Press Lever in the direction of the arrow C, check that clearance A between the capstan shaft and the Press Lever meets the required specification.

- When clearances A do not meet the required specification, perform the Pinch Press Lever Position Adjustment in Section 5-3.

5-3. PINCH PRESS LEVER POSITION ADJUSTMENT

Tool: Blank cassette tape

Wire clearance gauge (0.1, 0.2mm)

Mode: Play back and stop modes with the blank cassette tape.

Check procedure:

1. Insert the blank cassette tape and put the unit into the PLAY mode.
2. Confirm that clearance A between Press Levers (B) and (C) meets the required specification. (Spec. 1)
3. Put the unit into the STOP mode.
4. Confirm that clearance B between the pinch roller and the capstan shaft meets the required specification. (Spec. 2)

Adjustment procedure:

- Adjust so that clearances A and B meet the required specifications.
1. Insert the blank cassette tape and put the unit into the PLAY mode.
 2. Loosen the fixing screw of the Pinch Lever Support Ass'y by one turn.
 3. Adjust the assembly position so that clearance A between Press Levers (B) and (C) meets the required specification, when pushing the Pinch Lever Support Ass'y in the direction of arrow E.
 4. Tighten the fixing screw of the Pinch Lever Support Ass'y.
 5. Put the unit into the STOP mode and confirm that clearance B between the pinch roller and the capstan shaft meets the required specification.
 - When the specification is not satisfied, repeat Steps 1 through 5.

5-4. THREADING POSITION CHECK (SUPPLY SIDE)

Tool: Blank cassette tape

Mode: Put the unit into the threading completion mode and turn off the POWER switch.

Check procedure:

1. Insert the blank cassette tape, put the unit into the threading completion mode, then turn off the POWER switch.
2. When Pushing the S Sub Base Ass'y in the direction of the arrow A with a flatblade precision driver (2mm), confirm that it will not move.
3. When portion B of the S Sub Base Ass'y is pushed in the direction of the arrow C with a flatblade precision driver (2mm), confirm that it will not move in the vertical direction.
4. Confirm that the specifications are satisfied by repeating Steps 1 through 3 two or three times.

5-5. THREADING POSITION CHECK (TAKE-UP SIDE)

Tool: Blank cassette tape

Mode: Put the unit into the threading completion mode and turn off the POWER switch.

Check procedure:

1. Insert the blank cassette tape, unit into the threading completion mode, and then turn off the POWER switch.
2. When pushing the T Sub Base Ass'y in the direction of the arrow A with a flatblade precision driver (2mm), confirm that it will not move.
3. Confirm that the required specifications are satisfied by repeating Steps 1 through 3 two or three times.

5-6. IMPEDANCE ROLLER GUIDE II CLEARANCE ADJUSTMENT

Tool: Blank cassette tape

Wire clearance gauge (0.1mm)

Mode: Put the unit into the threading completion mode and turn off the POWER switch.

Check procedure:

1. Insert the blank cassette tape, put the unit into the threading completion mode, then turn off the POWER switch.
2. Confirm that clearance A between the lower Drum Ass'y and washer meets the required specification.

Adjustment procedure:

1. Loosen the fixing screw of the S Open Plate by one turn and adjust the S Open Plate position so that clearance A meets the required specification.
2. Perform Steps (1) and (2) in the check procedure and confirm that the required specification is satisfied.

5-7. TENSION REGULATOR OPERATING POSITION ADJUSTMENT

Tool: Cassette tape without a lid (BCT-30Ma) (5 minutes run portion from the tape beginnings)

Mode: Play back the cassette tape without a lid.

Check procedure:

1. Confirm that the positional relationship between the Tension Regulator Arm's hole and the CTL Head Fixing Screw meets the required specification.

Adjustment procedure:

1. Insert a phillips type screwdriver through the hole shown in the figure.
2. Turn the adjustment screw so that the required specification is satisfied.

SECTION 6 TAPE PATH ALIGNMENT

(Related Information for tape path adjustment)

1. Maintenance Mode Operation Procedure

Refer to Section 2-24 for how to enter the maintenance menu.

Select the menu No.

No.	Adjustment
604	Tracking control operations
605	SW position adjustment

Procedure for each operation are listed below.

604. Tracking Control Operations Mode

- Tracking can be controlled during PLAY using the FF/REW key.
- Press the PLAY button. Tracking will be reset to the center.
- FF/REW operations can only be performed in the STOP mode.

605. SW Position Adjustment

- The SW positions can be adjusted during PLAY using the FF/REW key.
- Adjustments will be fine when only the FF/REW key is pressed. Adjustments will be rough when the PLAY and FF/REW keys are pressed together.
- The SW positions cannot be moved in modes other than PLAY.
- While this menu is being selected, the H-LOCK of the video will be set into the OFF mode.
- After adjustments, press the MENU SET key. The data will be written in the non-volatile memory and the results of the writing (Yes, No) will be shown on the LCD.
- FF/REW operation can only be performed in the STOP mode.

2. Height Adjustment Procedure of the Tape Guide

When the height adjustment of the tape guide is performed in the Tape Run Alignment, use the tape guide adjustment driver (J-6321-500-A) prepared for the maintenance tool. After the height adjustment of the tape guide is completed, tighten the locking screw of the tape guide upper flange with the torque driver referring to Section 2-4.

1. Put the flatblade of the tape guide adjustment driver in the (-)slot of the tape guide.
2. Push down the locking knob of the adjustment driver and turn it counterclockwise about one turn.
3. Turn the adjustment driver and adjust the height of the tape guide.
4. After the adjustment is completed, tighten the locking screw of the tape guide upper flange referring to Section 2-4.
5. Apply the locking compound to the locking screw. (Never apply the locking compound to the tape running surface of the tape guide, upper and lower flanges.)

6-1. TAPE PATH ADJUSTMENT (PLAY MODE)

Tool: Cassette tape without a lid (BCT-30Ma)
Tape guide adjustment driver

Mode: Play back the cassette tape without a lid.

Check procedure:

1. Insert the cassette tape without a lid (BCT-30Ma) and put the unit into the PLAY mode.
2. Confirm that the tape runs without curl at the flanges of the TG-1, Tension Regulator Guide, TG-4, and Entrance Guide.
3. Confirm that the tape runs without curl at the flanges of the Exit Guide, TG-8, TG-10, and TG-11.

Adjustment procedure:

- **Tape curl at the Entrance Guide or at the lead at the drum entrance side.**
 1. Loosen the Upper Flange Locking Screw of the Entrance Guide with tape guide adjustment driver by one or two turns.
 2. Turn and adjust the flange of the Entrance Guide so that no tape curl occurs at the Upper Flange of the Entrance Guide and the tape runs along the lead at the drum entrance side.
 3. Temporarily tighten the Upper Flange Locking Screw of the Entrance Guide.
 4. Check that the tape runs without curl at the flanges of the TG-1 Tension Regulator Guide, TG-4, and Entrance Guide.
- **Tape curl at the Exit Guide or at the lead at the drum exit side.**
 5. Loosen the Upper Flange Locking Screw of the Exit Guide with a tape guide adjustment driver by one or two turns.
 6. Turn with a tape guide adjustment driver and adjust the flange of the Exit Guide so that no tape curl occurs at the Upper Flange of the Exit Guide and the tape runs along the lead at the drum exit side.
 7. Temporarily tighten the Upper Flange Locking Screw of the Exit Guide.
 8. Insert the cassette tape without a lid (UVW-30Ma), put the unit into the PLAY mode, and confirm that the tape runs without curl at the flanges of each guide.

6-2. TAPE PATH CHECK (FF AND REW MODES)

Tool: Cassette tape without a lid (BCT-30Ma)
(at the complete tape end)

Mode: Fast-forward and rewind mode with the
cassette tape without a lid.

Check procedure:

1. Insert the cassette tape without a lid (BCT-30Ma), put the unit into the FF mode, and confirm that the tape runs without curl at the flanges of each guide. If occurs, curl less than one sixth of the tape width can be acceptable.
2. Put the unit into the REW mode and confirm that the tape runs without curl at the flanges of each guide. If occurs, curl less than one sixth of the tape width can be acceptable.

- When the tape curl does not satisfy the required specification, perform the Tape Path Adjustment (PLAY mode) in Section 6-1 again.

6-3. TAPE THREADING/UNTHREADING CHECK

Tool: Cassette tape without a lid (BCT-30Ma)
(at the complete tape beginning)
Cassette tape without a lid (BCT-30Ma)
(at the complete tape end)

Mode: Thread the cassette tape without a lid.

Check procedure:

1. Thread the cassette tape without a lid at the complete tape beginning. Confirm that the tape is threaded at the upper and lower flanges of the Entrance and Exit Guide Rollers without curl at this time.
2. Put up the mechanical deck block with the cassette tape in the upper position and drum in the lower position.
3. Check that the threading and unthreading operation is smooth.
4. Repeat Steps 1 through 3 two or three times and confirm that the required specification is satisfied.
5. Thread the cassette tape without a lid at the complete tape end.
6. Check as in Step 1.
7. Check as in Steps 1 through 4.

6-4. PLAY BACK TENSION ADJUSTMENT

Tool: Cassette tape without a lid (BCT-30Ma)
(5-minutes run portion from the tape beginning)

Tentelometer: T2-H7-UMC

Mode: Play back the cassette tape without a lid

Check procedure:

1. Confirm that the tension regulator operating position meets the required specification in Section 5-7. Tension Regulator Operating Position Adjustment.
2. Insert the Tentelometer between Full Erase Head and Guide Roller (TG-4) as shown in the figure.
3. Confirm that the reading meets the required specification.

Adjustment procedure:

1. Adjust the tension regulator operating position so that the specification is satisfied within the limits required in Section 5-7.
2. When the required specification is not satisfied, replace the Supply Side Reel Table and Tension Regulator Band.
3. Perform the Section 5-7. Tension Regulator Operating Position Adjustment.
4. Perform the check procedure.

6-5. TAPE PATH ADJUSTMENT (AROUND THE PINCH ROLLER)

Tool: Cassette tape without a lid (BCT-30Ma)

Mode: Play back the cassette tape without a lid.

Check procedure:

1. Insert the cassette tape without a lid (BCT-30Ma) and put the unit into the PLAY mode.
2. Put the unit into the PLAY and STOP modes two or three times every two or three seconds and confirm that the tape path of the designated portion (between the A/T Head and capstan shaft) indicated by the arrow satisfies the specifications below.
 - No uneven tape tension occurs at the upper and lower edges of the tape.
 - When the pinch roller is pressed against the capstan shaft, any tape wrinkle occurring on the tape disappears within one second.
 - The tape is not damaged.
3. After unthreading is completed, put the unit into the threading and PLAY modes two or three times.
4. Put the unit into the PLAY mode and confirm that the tape path of the portion indicated by the arrow meets the required specifications in Step 2.

6-6. PLAY TORQUE CHECK

Tool: FWD torque cassette tape, SL-0003C

Mode: PLAY mode with torque cassette

Check procedure:

1. Put the unit into PLAY mode with a torque cassette.
2. After 2 or 3 seconds later, when the pinch roller is pressed against the capstan shaft, confirm that the indication of the meter on the T side of FWD torque cassette tape meets the required specification.

- When the required specification is not satisfied, replace the T Idler Ass'y.

*Spec.: PLAY torque
36±6 g·cm*

6-7. REV TORQUE CHECK

Tool: FWD torque cassette tape, SL-0003C

Mode: Insert the torque cassette tape and put the unit into the REC PAUSE mode.

Check procedure:

1. Insert the torque cassette and switch the mode in the following order.
REC → PAUSE
2. When the mode is changing from REC mode to PAUSE mode, the tape gets into REV mode. Confirm that the meter indication meet the specification.

- When the required specification is not satisfied, replace the S Idler Ass'y.

*Spec.: REV torque
50 $\begin{smallmatrix} +20 \\ -10 \end{smallmatrix}$ g·cm*

6-8. TRACKING ADJUSTMENT

- The tape guides and heads at the drum entrance side in this adjustment are illustrated.
- The tape guides and heads at the drum exit side in this adjustment are illustrated.
- Before performing the tracking adjustment, clean the tape guide, stationary head, drum, capstan shaft, and pinch roller described above with a cloth moistened with cleaning fluid.
- The drum mounts four video heads for Y and C heads, respectively. The video tracking adjustment is made with channel 1 of the Y head as reference.
- After the tracking adjustment is completed, perform the adjustment as follows:
 - Sec 6-1 Tape Path Adjustment (Play Mode)
 - Sec 6-2 Tape Path Check (FF and REW Modes)
 - Sec 6-9 CTL Head Height Adjustment
 - Sec 6-10 CTL Head Position Adjustment
 - Sec 6-12 Audio/Timecode Head Position Adjustment
 - Sec 6-13 Audio Timecode Head Height Adjustment
 - Sec 6-12 Audio/Timecode Head Position Adjustment (Check)
 - Sec 6-14 Audio Timecode Head Phase Adjustment

Tool: Alignment tape without a lid
(CR2-1B/CR2-1B PS)

Dental mirror

Oscilloscope

Tape guide adjustment driver

Setting: Select MENU No. 604 from the maintenance menu.

(Refer to Section 2-24)

Mode: Play back the alignment tape.

Check procedure:

1. Connect the oscilloscope as follows:
CH-1: TP700/VO-46 Board
(waveforms of Y head in CH1 to CH4)
CH-2: TP702/VO-46 Board
(Stair Pulse)
TRIG: TP702/VO-46 Board
(Stair Pulse)
2. Insert the alignment tape CR2-1B/1BPS and put the unit into the PLAY mode.
3. Confirm that the waveforms of channels 1 through 4 of the Y head meet the required specifications of the Steps 4 and 5.
4. Check that the RF envelope waveform increases and decreases while remaining flat when the FF or REW button is pressed.
5. Check that the RF envelope waveform head-to-tape contact and fluctuation are within the specification at the maximum amplitude.
6. Connect the oscilloscope as follows:
CH-1: TP750/VO-46 Board
(waveforms of CH1 through CH4 of C head)
CH-2: TP702/VO-46 Board
(Stair pulse)
TRIG: TP702/VO-46 Board
(Stair pulse)
7. Confirm that the waveforms of channels 1 through 4 of the C head meet the required specifications of the Steps 4 and 5.

Adjustment procedure:

1. Connect the oscilloscope as follows:
 CH-1: TP700/VO-46 Board
 CH-2: TP702/VO-46 Board
 TRIG: TP702/VO-46 Board
 2. Insert the alignment tape CR2-1B/CR2-1B PS and put the unit into the PLAY mode.
 3. Press the FF or REW button and adjust so that the maximum RF envelope waveform output is around 70% to 80%.
- To make a tracking adjustment at entrance side, perform Steps 4 through 8 plus Steps 14 and after. To make a tracking adjustment at exit side, perform Steps 9 through 13 plus Steps 14 and after.
4. Loosen the Upper Flange Locking Screw of the Entrance Guide by one or two turns with the tape guide adjustment driver.
 5. Turn the upper flange of the Entrance Guide with the tape guide adjustment driver and adjust so that the required specifications below are satisfied.
 - (i) The RF envelope waveform at entrance side is flat.
 - (ii) No tape curl occurs at the upper flange of the Entrance Guide.
 - (iii) The tape touches the lead at the drum entrance side.
 6. Tighten the Upper Flange Locking Screw of the Entrance Guide with the tape guide adjustment driver.
 7. Put the unit into the EJECT and PLAY modes two or three times and confirm that the required specifications in Step 5 are satisfied.

8. When raised the mechanical deck with the cassette tape in the upper position and the drum in the lower position, check that the RF envelope waveform at the entrance side meets the required specification.
9. Loosen the Upper Flange Locking Screw of the Exit Guide by one or two turns with a tape guide adjustment driver.
10. Turn the upper flange of the Exit Guide with the tape guide adjustment tool and adjust so that the required specifications below are satisfied.
 - (i) The RF envelope waveform at exit side make flat.
 - (ii) No tape curl occurs at the upper flange of the Exit Guide.
 - (iii) The tape touches the lead at the drum exit side.
11. Tighten the Upper Flange Locking Screw of the Exit Guide with the tape guide adjustment driver.
12. Repeat the EJECT and PLAY modes two or three times and confirm that Step 10 is satisfied.
13. When raised the mechanical deck with the cassette tape in the upper position and the drum in the lower position, confirm that the RF envelope waveform at the exit side meets the required specification.
14. Connect the oscilloscope as follows:
 CH-1: TP750/VO-46 Board
 CH-2: TP702/VO-46 Board
 TRIG: TP702/VO-46 Board
15. Check that the RF envelope waveform increases and decreases while remaining flat when the FF or REW button is pressed.
16. Perform the adjustments as follows:
 Sec 6-1 Tape Path Adjustment (Play Mode)
 Sec 6-2 Tape Path Check (FF and REW Mode)

Spec.:

$$\frac{B}{A} \leq \frac{1}{2}$$

envelope waveform
(CH-1)

stair pulse (CH-2)

6-9. CTL HEAD HEIGHT ADJUSTMENT

Tool: Alignment tape without a lid (CR8-1A/CR8-1B PS) Oscilloscope

Setting: Connect the oscilloscope as follows:
CH-1:TP2/FE-18 Board

Mode: Play back the alignment tape.

Adjustment procedure:

1. Play back a 1 kHz audio signal which is recorded on the CTL track of the alignment tape.
2. Turn the height adjustment screw so that the output waveform is maximized.

6-10. CTL HEAD POSITION ADJUSTMENT

- The drum mounts four video heads for Y and C heads, respectively. The CTL head position adjustment is made with channel 1 of the Y head as reference.

Tool: Alignment tape without a lid
(CR2-1B/CR2-1B PS)
Oscilloscope
Screwdriver -3mm

Setting: 1. Select MENU No. 604 from the maintenance menu.
(Refer to Section 2-24)
2. Connect the oscilloscope as follows:
CH-1: TP700/VO-46 Board
CH-2: TP702/VO-46 Board
TRIG: TP702/VO-46 Board

Mode: Play back the alignment tape.

Check procedure:

1. Insert the alignment tape CR2-1B/CR2-1B PS and put the unit into the PLAY mode.
2. Check that the RF envelope waveform decreases when the FF or REW button is pressed.
(Adjust if it increases even if it is slight.)
3. Confirm that the relationship between the switching pulse and RF envelope waveform meets the required specification.

Adjustment procedure:

1. Press the PLAY button and adjust the tracking to the center.
2. Loosen the fixing screw of CTL head by 1/2 turn.
3. Insert a flatblade 3mm screwdriver into the notch of the CTL Head Mounting Bracket and adjust the CTL head position so that the RF envelope waveform is maximum.
4. Tighten the CTL head fixing screw.
5. Check according to the check procedure.

6-11. AUDIO TIMECODE HEAD ZENITH ADJUSTMENT

Tool: Flatness plate

Mode: EJECT mode

Check procedure:

1. Put the flatness plate onto the IR-11 guide and audio head.
2. When the flatness plate is pressed onto the IR-11 guide, confirm that the clearance between the flatness plate and audio head meets the required specification.

Adjustment procedure:

1. Adjust the Zenith Adjustment Screw so that the specification is satisfied.
2. Adjust as follows:
 - Sec 6-14 Audio Timecode Head Phase Adjustment
 - Sec 6-12 Audio Timecode Head Position Adjustment
 - Sec 6-13 Audio Timecode Head Height Adjustment
 - Sec 6-12 Audio Timecode Head Position Adjustment

6-12. AUDIO/TIMECODE HEAD POSITION ADJUSTMENT

Tool: Alignment tape without a lid
(CR2-1B/CR2-1B PS)
Screwdriver -3 mm

Setting: Connect the oscilloscope as follows:
CH-1: TP2/FE-18 Board (CTL waveform)
CH-2: TP1/MB-552 Board (TC waveform)
TRIG: TP405/SS-57 Board (1/2 VD)

Mode: Play back the alignment tape.

Check procedure:

1. Insert the alignment tape CR2-1B/CR2-1B PS and put the unit into the PLAY mode.
2. Confirm that the relationship between the phase at the falling edge of the CTL waveform and that at the falling edge of the TC waveform meets the required specification.

Adjustment procedure:

1. Loosen the A/T Head Position Fixing Screw by one or two turns.
2. Insert a flatblade 3mm screwdriver into portion B of the A/T Damper Plate and adjust the Audio/Timecode head position so that the required specification is satisfied.
3. Tighten the A/T Head Position Fixing Screw and recheck.

6-13. AUDIO TIMECODE HEAD HEIGHT ADJUSTMENT

Tool: Alignment tape without a lid (CR8-1A/CR8-1B PS)

Setting: (1) Connect the oscilloscope as follows:

CH-1: TP303/AU-185 Board

CH-2: TP403/AU-185 Board

Mode: Play back the alignment tape.

Check procedure:

1. Play back an 1 kHz/0 dB audio signal on the alignment tape.
2. When pushing up and pressing down the tape of the illustrated portion between the audio/timecode head and IR-11 Guide, confirm that the output waveform is decreased without increasing. (Perform the adjustment when the output waveform is increased.)

Adjustment procedure:

- When the output waveform is increased by pushing up the tape.
1. Turn the Height Adjustment Screw clockwise so that the output waveform is maximum.
-
- When the output waveform is increased by pressing down the tape.
2. Turn the Height Adjustment Screw counterclockwise so that the output waveform is maximum.

6-14. AUDIO TIMECODE HEAD PHASE ADJUSTMENT

Tool: Alignment tape without a lid
(CR8-1A/CR8-1B PS)

Setting:

1. Connect the horizontal and vertical terminals of the oscilloscope to TP303 and TP403 on the AU-185 Board.
2. Play back an 1 kHz audio signal on the alignment tape.
3. Adjust the oscilloscope for horizontal and vertical amplitudes to 6cm of a lissajous waveform.

Mode: Play back the alignment tape.

Check procedure:

1. Play back an 1 kHz audio signal on the alignment tape.
2. Confirm that the phase difference meets the required specification.
3. Play back a 10 kHz/-10 dB audio signal on the alignment tape.
4. Confirm that the phase difference meets the required specification.

Adjustment procedure:

1. Play back 1 kHz and 10 kHz audio signals on the alignment tape.
2. Adjust the Azimuth Adjustment Screw so that both specifications are satisfied.

Spec.: 1 kHz: $A \leq 0.52 \text{ cm } (5^\circ)$
10 kHz: $A \leq 0.52 \text{ cm } (5^\circ)$

6-15. PB SWITCHING POSITION ADJUSTMENT

Tool: Alignment tape, CR2-1B/CR2-1B PS

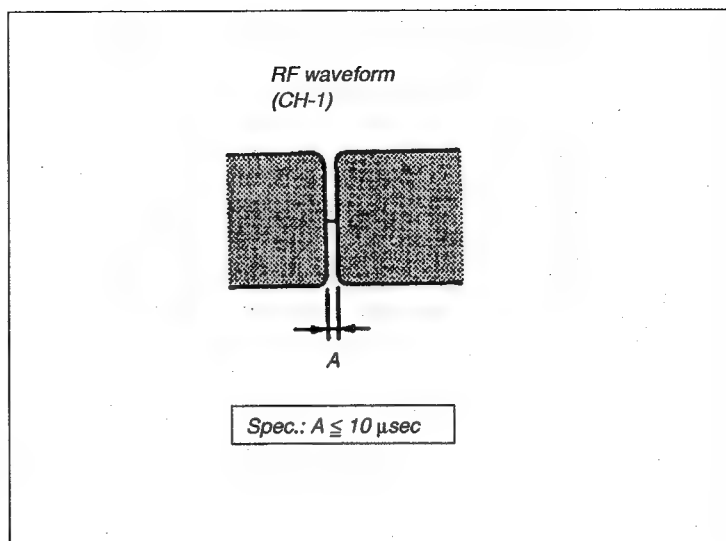

Setting:

1. Setting: Select MENU No. 605 from the maintenance menu.
(Refer to Section 2-24.)
2. Connect the oscilloscope as follows:
CH-1: TP700/VO-46 board
TRIG: TP405/SS-57 board

Mode: Play back the alignment tape.

Adjustment procedure:

1. Insert the alignment tape CR2-1B/CR2-1B PS and put the unit into the PLAY mode.
2. Press the FF or REW button and adjust so that the CH-1 waveform satisfies the specification.
(At MENU No. 605, the switching position can be adjusted finely using the FF or REW button. It can be adjusted roughly by pressing the PLAY button together with the FF or REW button.)
3. Press the MENU SET button and check that the writing result displayed on the LCD is "YES".
4. If "NO" is displayed, set a maintenance menu other than MENU No. 605 and select MENU No. 605 again.
Press the MENU SET button.

6-16. BRUSH ADJUSTMENT

6-16-1. Brush Position Adjustment

Mode: EJECT

Check procedure:

Confirm that the slip ring and the brush are in the following status when viewed from top.

1. Make sure that the brush is positioned as shown in the illustration with reference to the slip ring.
2. Make sure that the slip ring is placed at the center of moldline on the brush cover.

Adjustment procedure:

1. Loosen the two fixing screws of the Brush Base, and adjust the position of the brush base so that the specification is satisfied.

6-16-2. Brush Height Adjustment

Mode: EJECT

Check procedure:

1. Confirm that the Brush is parallel to the Slip Ring Groove.

Adjustment procedure:

1. Remove the Brush Base from the unit as described in Section 6-16-1. Brush Position Adjustment.
2. Remove the Brush Cover from the Brush Base.
3. Install the Brush Base on the unit, and loosen the two fixing screws of the Brush Base and adjust so that the specification is satisfied.
4. After adjustment, install the Brush Cover and adjust the brush position as described in Section 6-16-1.

SECTION 7 ELECTRICAL ALIGNMENT OVERVIEW

Note: Do not touch the switches and knobs as mentioned above without particular indication.

[Notes on Adjustment]

- Blank tape means a cassette tape on which no video/audio signals are recorded.

9-1. CAPSTAN FREE SPEED ADJUSTMENT

Adjustment procedure

1. Confirm that no tape is inside the unit.
2. Enter maintenance menu, and select the menu number 601.

(1) While pressing the SHIFT button, press the MENU button. And then remove a hand from the SHIFT button and keep pressing the MENU button more than 1 second.

Indication in the display window

(In the following description, an underscore indicates a portion of the display which is blinking.)

- (2) Press the RESET(MENU SET) button once, then "OFF" is blinking.

Indication in the display window

Whenever pressing the RESET(MENU SET) button, "600" and "OFF" is blinking alternately.

- (3) Press the ADVANCE button once, then select "ON"

Indication in the display window

Whenever pressing the ADVANCE button, "ON" and "OFF" is set alternately.

- (4) Press the RESET(MENU SET) button once.
Indication in the display window

Whenever pressing the RESET(MENU SET) button, "600" and "ON" is blinking alternately.

- (5) Press the ADVANCE button once, then menu number 601 is indicated.

Indication in the display window

Whenever pressing the ADVANCE button, indication cycles through the following menu number.

600→601→602→....→509→600→601→....

Whenever pressing the SHIFT button, indication cycles through the following menu number.

600→509→508→....→601→600→509→....

3. Press the RESET(MENU SET) button.

4. After confirmed the capstan turns, wait for a while.(max. 60 sec.)

5. Confirm the following indication in the display window.

If the following figure is displayed, exit the menu number 601 once. And perform procedure 2 and later.

When the menu has no change, check the unit error.

6. Press the MENU button to exit the maintenance menu.
The display window returns to the state before entering the maintenance menu.

9-2. STOP SERVO ADJUSTMENT

Adjustment procedure:

1. Insert a blank tape (BCT-20MA) into the unit.
2. Enter maintenance menu, and select the menu number 602.

(1) While pressing the SHIFT button, press the MENU button. And then remove a hand from the SHIFT button and keep pressing the MENU button more than 1 second.

Indication in the display window.

(In the following description, an underscore indicates a portion of the display which is blinking.)

- (2) Press the RESET(MENU SET) button once, then "OFF" is blinking.

Indication in the display window

Whenever pressing the RESET(MENU SET) button, "600" and "OFF" is blinking alternately.

- (3) Press the ADVANCE button once, then select "ON".

Indication in the display window

Whenever pressing the ADVANCE button, "ON" and "OFF" is set alternately.

- (4) Press the RESET(MENU SET) button once.

Indication in the display window

Whenever pressing the RESET(MENU SET) button, "600" and "ON" is blinking alternately.

- (5) Press the ADVANCE button twice, then menu number 602 is indicated.

Indication in the display window

Pressing the ADVANCE button cycles through the following menu number.

600→601→602→....→509→600→601→....

Pressing the SHIFT button cycles through the following menu number.

600→509→508→....→601→600→509→....

3. Press the PLAY button. Confirm that the capstan turns a little, and then stops.

4. Press the following buttons so that the following specification is satisfied.

Equipment: Oscilloscope

Test point: CH-2:TP201/SS-57 Board

Trigger: CH-1:TP203/SS-57 Board

Adjustment button:

F FWD button, REW button

Specification:

OK

No interval between underline of waveform.

NG

SS-57 BOARD -A SIDE-

5. Press the RESET(MENU SET) button, and confirm the following indication in the display window.

If following figure displayed, press the STOP button and exit the menu number 602. And perform procedure 2 and later.

When the menu has no change, check the unit error.

6. Press alternately the STOP and PLAY buttons serial times, confirm the specification is satisfied.
7. Put the unit into Enter the STOP mode.(Press the STOP button.)
8. Press the MENU button to exit the maintenance menu. The display window returns to the state before entering the maintenance menu.

SECTION 10

AUDIO ALIGNMENT

[Equipment Required] for NTSC

- Oscilloscope (Tektronix 2445B/200 MHz or equivalent)
- Digital Voltmeter (Advantest TR6845 or equivalent)
- Frequency Counter (Advantest TR5821 or equivalent)
- Audio Signal Generator (HP8904 or equivalent)
- Audio Level Meter (HP3400A or equivalent)
- Standard Playback Unit (SONY PVW-2600 or equivalent)
- DC Power Supply (SONY AC-500/550 or CMA-8/8A)
- Blank Tape (SONY BCT-20MA or equivalent)
- Alignment Tape CR8-1A (Sony part No.; 8-960-097-45)

[Alignment tape contents]

CR8-1A (Sony part No.; 8-960-097-45)

TIME min. sec	AUDIO TRACK	VIDEO TRACK	CTL TRACK
0: 00	1 kHz, 0 VU*1	—	CTL
2: 55	Blank		
3: 00	10 kHz, -10 VU		
4: 55	Blank	—	CTL
5: 00	1 kHz, -20 VU		
5: 55	Blank		
6: 00	40 Hz, -20 VU*2	—	CTL
6: 25	Blank		
6: 30	7 kHz, -20 VU*2		
6: 55	Blank	—	CTL
7: 00	10 kHz, -20 VU*2		
7: 25	Blank		
7: 30	15 kHz, -20 VU*2	—	CTL
7: 55	Blank		
8: 00	Blank		
10: 00	1 kHz, 0 VU	—	1 kHz, 0 VU

Note:

- *1. When the tape is played back to check or adjust the audio reference level, the output level (+4 dB) should be calibrated in accordance with the value described below.

Example) Calibration level = -0.5 dB
Output level = +4 dB -0.5 dB = +3.5 dB

- *2. When the tape is played back to check or adjust the audio frequency response, the output level should be calibrated with the calibration value.

[Equipment Required] for PAL

- Oscilloscope (Tektronix 2445B/200 MHz or equivalent)
- Digital Voltmeter (Advantest TR6845 or equivalent)
- Frequency Counter (Advantest TR5821 or equivalent)
- Audio Signal Generator (HP8904 or equivalent)
- Audio Level Meter (HP3400A or equivalent)
- Standard Playback Unit (SONY PVW-2600P or equivalent)

[Preparation before Adjustment]

Cleaning of stationary heads

Clean stationary heads by the cleaning piece moistened with cleaning fluid.
After the fluid vaporizes, wipe off the heads by a not-weaved cloth or cleaning piece.

[Notes on Adjustment]

- Blank tape means a cassette tape on which no video/ audio signals are recorded.
- When an alignment tape (CR8-1A or CR8-1B PS) is played back, specification should be corrected according to the correction value mentioned in the tape level.
- The alignment tape is used within the limits about 50 times and recommend to manage by marking.
- Standard playback unit should be the unit which audio head phase, playback frequency response, playback level adjustments.
And also adjusted with playback video phase, playback Y/C delay and playback C/C delay adjustments are performed.
- 0 dBu = 0.775 Vrms

[Level Diagram]

AUDIO SYSTEM LEVEL DIAGRAM

[Menu Selection]

In the following audio alignment, change the setting of system menu numbers 303 and 306.

- 10-1. Audio Level Volume Reference Position Adjustment
- 10-2. Limiter Level Adjustment
- 10-3. Meter Level Adjustment
- 10-8. Overall Recording Level Adjustment
- 10-9. Overall Dolby Frequency Response Adjustmnet
- 10-10. Overall Channel Phase Adjustment

How to set the menu numbers 303 and 306 is as follows.

1. How to set the menu number 303 to "OFF" or 306 to "ON"

(1) While pressing the SHIFT button, press the MENU button. And then remove a hand from the SHIFT button and keep pressing the MENU button more than 1 second.

Indication in the display window

(In the following description, an underscore indicates a portion of the display which is blinking.)

- (2) Press the ADVANCE button or SHIFT button, then menu number (303 or 306) is indicated.

Indication in the display window

Whenever pressing the ADVANCE button, indication cycles through the following menu number.

600 → 301 → → 305 → 306 →

Whenever pressing the SHIFT button, indication cycles through the following menu number.

600 → 509 → → 307 → 306 →

- (3) Press the RESET(MENU SET) button once, then "ON/OFF" side is blinking.

Indication in the display window

Whenever pressing the RESET(MENU SET) button, menu number (303 or 306) and current setting (ON or OFF) is blinking alternately.

- (4) Press the ADVANCE button once, then select "ON/OFF".

Indication in the display window

Whenever pressing the ADVANCE button, "ON" setting and "OFF" setting is alternately.

- (5) Press the RESET(MENU SET) button once.

Indication in the display window

Whenever pressing the RESET(MENU SET) button, menu number (303 or 306) and current setting (OFF or ON) is blinking alternately.

2. How to exit system menu by setting the menu number 303 to "ON" or 306 to "OFF".

- (1) Press the RESET(MENU SET) button, then "ON/OFF" side is blinking.

Indication in the display window.

Pressing the RESET(MENU SET) button changes menu number or current setting blinking alternately.

- (2) Press the ADVANCE button once, then select "ON/OFF".

Indication in the display window.

Whenever pressing the ADVANCE button, "ON" setting and "OFF" setting is alternately.

- (3) Press the MENU button.

The display window returns to the state before entering the system menu.

PPV-3 (UC)
PPV-3P (EK)

10-1. AUDIO LEVEL VOLUME REFERENCE POSITION ADJUSTMENT

Equipment: Audio Level Meter, Audio Signal Generator

Preparation:

- Set the AUDIO SELECT switches to MANUAL position.
- Set the menu numbers 303 to OFF and 306 to ON.
- AUDIO INPUT CH-1/CH-2: 1 kHz, + 4.0 dBu
- EE mode

Test point: TP101/TC-86 Board (CH-1)
TP201/TC-86 Board (CH-2)

Adjusting point:

- RV102/TC-86 Board (CH-1)
- RV202/TC-86 Board (CH-2)

Specification: -10.0 ± 0.1 dBu

Note: After the adjustment, be sure to set the menu numbers 303 to ON, 306 to OFF and set the AUDIO SELECT switches to AUTO position.

10-2. LIMITER LEVEL ADJUSTMENT

Equipment: Audio Level Meter, Audio Signal Generator

Preparation:

- Set the AUDIO SELECT switches to MANUAL position.
- Set the menu number 306 to ON.
- AUDIO INPUT CH-1/CH-2: 1 kHz, + 14 dBu
- EE mode

Test point: TP101/TC-86 Board (CH-1)
TP201/TC-86 Board (CH-2)

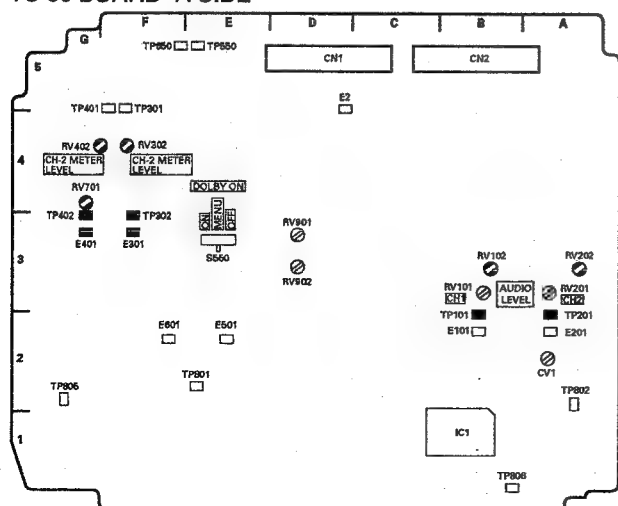

Adjusting point:

- RV701/TC-86 Board (CH-1)

Specification: [for NTSC] -0.5 ± 0.2 dBu
[for PAL] -1.5 ± 0.2 dBu

Note: After the adjustment, be sure to set the menu number 306 to OFF and set the AUDIO SELECT switches to AUTO position.

TC-86 BOARD -A SIDE-

PVV-3 (UC)
PVV-3P (EK)

10-3. METER LEVEL ADJUSTMENT

Equipment: Digital Voltmeter, Audio Signal Generator

Preparation:

- Set the AUDIO SELECT switches to MANUAL position.
- Set the menu number 306 to ON.
- AUDIO INPUT CH-1/CH-2: 1 kHz, + 4.0 dBu
- EE mode

Test point: TP302/TC-86 Board (CH-1)
GND: E301
TP402/TC-86 Board (CH-2)
GND: E401

Adjusting point:

- RV302/TC-86 Board (CH-1)
- RV402/TC-86 Board (CH-2)

Specification: 1.47 ± 0.01 V dc

Note: After the adjustment, be sure to set the menu number 306 to OFF and set the AUDIO SELECT switches to AUTO position.

10-4. PLAYBACK FREQUENCY RESPONSE ADJUSTMENT

Equipment: Audio Level Meter

Preparation:

- Set the menu number 603 to ON. (Refer to page 2-51.)
- Insert an alignment tape (CR8-1A or CR8-1B PS) into the unit and play back the 40 Hz, 1 kHz, 7 kHz, 10 kHz, 15 kHz and - 20 VU portions (5:00-8:00).

Test point: TP303/AU-185 Board (CH-1)
TP403/AU-185 Board (CH-2)

Adjusting point:

- RV302/AU-185 Board (CH-1)
- RV402/AU-185 Board (CH-2)

Specification:

Frequency (Hz)	Output level (dB)
40	0 ± 3
1 k	0 (Reference)
7 k	0 ± 1
10 k	0 ± 1
15 k	0 ± 1.5

CH-1 and CH-2

- When the specification is not satisfied at the 10 kHz portion, solder the following points and perform the adjustment again.
CH-1: SL301/AU-185 Board
CH-2: SL401/AU-185 Board

Note: Each output level should be calibrated with the calibration value. (Refer to page 10-1 or 10-2.) After the adjustment, be sure to set the menu number 603 to OFF.

10-5. PLAYBACK REFERENCE LEVEL ADJUSTMENT

Equipment: Audio Level Meter

Preparation:

- Set the menu number 603 to ON. (Refer to page 2-51.)
- Insert an alignment tape (CR8-1A or CR8-1B PS) into the unit and play back the 1 kHz, 0 VU portion (0:00-3:00).

Test point: TP303/AU-185 Board (CH-1)
TP403/AU-185 Board (CH-2)

Adjusting point:

- RV303/AU-185 Board (CH-1)
- RV403/AU-185 Board (CH-2)

Specification: -10.0 ± 0.5 dBu

Note: Each output level should be calibrated with the calibration value. (Refer to page 10-1 or 10-2.) After the adjustment, be sure to set the menu number 603 to OFF.

10-6. BIAS TRAP ADJUSTMENT

Equipment: Oscilloscope, Frequency Counter

Preparation:

1. AUDIO INPUT CH-1/CH-2: No signal
2. Preset the following trimmers to the position as shown in the figure.

CV131/AU-185 Board

CV231/AU-185 Board

3. Insert a blank tape (BCT-20MA) into the unit.
4. REC mode.

Adjustment procedure

1. **Test point:** TP102/AU-185 Board (CH-1)
TP202/AU-185 Board (CH-2)

Adjusting point:

- LV131/AU-185 Board (CH-1)
- LV231/AU-185 Board (CH-2)

Equipment: Oscilloscope

Specification:

The distortions of the right and left should be symmetrical.

Note: CH-1 and CH-2 influences each other, so adjust then repeatedly, and the confirm.

50 mV/DIV 2 μ s/DIV

2. **Test point:** TP301/AU-185 Board (CH-1)
GND: TP302/AU-185 Board
TP401/AU-185 Board (CH-2)
GND: TP402/AU-185 Board

Equipment: Frequency Counter

Specification:

134 \pm 15 kHz

When the specification is not satisfied, turn T1 on the AU-185 board. After the adjustment, check adjustment procedure 1 again.

PVV-3 (UC)
PVV-3P (EK)

AU-185 BOARD -A SIDE-

10-7. BIAS CURRENT ADJUSTMENT

Equipment: Audio Level Meter

Preparation:

1. AUDIO INPUT CH-1/CH-2: No signal
2. Insert a blank tape (BCT-20MA) into the unit.
3. REC mode.

Test point: TP301/AU-185 Board (CH-1)
GND: TP302/AU-185 Board
TP401/AU-185 Board (CH-2)
GND: TP402/AU-185 Board

Adjusting point:

- CV131/AU-185 Board (CH-1)
- CV231/AU-185 Board (CH-2)

Specification:

18.5 \pm 0.5 mV rms

Note: CH-1 and CH-2 influences each other, so adjust then repeatedly, and then confirm.

10-8. OVERALL RECORDING LEVEL ADJUSTMENT

Use a standard playback unit that audio head phase, playback frequency response and playback level are adjusted by an alignment tape.

Equipment: Audio Level Meter, Audio Signal Generator

Adjustment procedure:

1. Set the AUDIO SELECT switches to MANUAL position.
2. Set the menu number 306 to ON.
3. AUDIO INPUT CH-1/CH-2: 1 kHz, + 4.0 dBu
4. Insert a blank tape (BCT-20MA) into the unit.
5. REC mode
6. Play back the recorded portion with the standard playback unit (DOLBY ON).

Test point: AUDIO OUT CH-1/CH-2 (600 Ω load: Standard playback unit)

Specification: +4.0 \pm 0.2 dBu

When the specification is not satisfied, perform procedure 7 and later.

7. AUDIO INPUT CH-1/CH-2: 1 kHz, + 4.0 dBu
8. Insert a blank tape (BCT-20MA) into the unit.
9. REC mode

Test point: TP102/AU-185 Board (CH-1)
TP202/AU-185 Board (CH-2)

Adjusting point:

- RV111/AU-185 Board (CH-1)
- RV211/AU-185 Board (CH-2)

Specification: Correct the output level of procedure 6 to just enough.

$$\begin{aligned} \text{Correction value} &= \text{Difference level} \\ &= \text{Specification value (+ 4.0 dBu)} \\ &\quad - \text{Measured value} \end{aligned}$$

Example)

Specification value	+ 4.0 dBu
Measured value	+ 5.0 dBu
Correction value =	+ 4.0 dBu - (+ 5.0 dBu)
	= - 1.0 dBu

AU-185 BOARD -A SIDE-

After the adjustment, check procedure 6 again.

Note:

After the adjustment, be sure to set the menu number 306 to OFF and set the AUDIO SELECT switches to AUTO position.

10-9. OVERALL DOLBY FREQUENCY RESPONSE ADJUSTMENT

Use a standard playback unit that audio head phase, playback frequency response and playback level are adjusted by an alignment tape.

Equipment: Audio Level Meter, Audio Signal Generator

Adjustment procedure:

1. Set the AUDIO SELECT switches to MANUAL position.
2. Set the menu number 306 to ON.
3. AUDIO INPUT CH-1/CH-2: 40 Hz, 1 kHz, 7 kHz, 10 kHz, 15 kHz, -16 dBu
4. Insert a blank tape(BCT-20MA) into the unit.
5. REC mode
6. Play back the recorded portion with the standard playback unit(DOLBY ON).

Test point: AUDIO OUT CH-1/CH-2(600 Ω load: Standard playback unit)

Specification:

CH-1 and CH-2

Frequency (Hz)	Output level (dB)
40	0 ± 1.5 -3.0
1k	0 (Reference)
7 k	0 ± 1.0
10 k	0 ± 1.0 -1.5
15 k	0 ± 1.0 -1.5

When the specification is not satisfied, perform procedure 7 and later.

Note: Each output level should be calibrated with the calibration value.
(Refer to page 10-1 or 10-2.)

7. AUDIO INPUT CH-1/CH-2: 10 kHz, 15 kHz, -16 dBu
8. Insert a blank tape(BCT-20MA) into the unit.
9. REC mode

Test point: TP102/AU-185 Board (CH-1)
TP202/AU-185 Board (CH-2)

Adjusting point:

- Adjustment at 10 kHz portion
- RV112/AU-185 Board (CH-1)
- RV212/AU-185 Board (CH-2)
- Adjustment at 15 kHz portion
- LV111/AU-185 Board (CH-1)
- LV211/AU-185 Board (CH-2)

Specification: Correct the half of the difference level from the center value of the specification in procedure 6.

$$\begin{aligned} \text{Difference level} &= \text{Specification value} \\ &\quad - \text{Measured value} \\ \text{Correction value} &= 1/2 \times \text{Difference level} \\ &= 1/2 \times (\text{Specification value} \\ &\quad - \text{Measured value}) \end{aligned}$$

Example)

$$\begin{aligned} \text{Specification value} &= 0 \text{ dB} \\ \text{Measured value} &= +2.0 \text{ dB} \\ \text{Correction value} &= 1/2 \times (0 \text{ dB} - (+2.0 \text{ dB})) \\ &= -1.0 \text{ dB} \end{aligned}$$

After the adjustment, check procedure 6 again.

Note: After the adjustment, be sure to set the menu number 306 to OFF and set the AUDIO SELECT switches to AUTO position.

AU-185 BOARD -A SIDE-

10-10. OVERALL CHANNEL PHASE ADJUSTMENT

Use a standard playback unit that audio head phase, playback frequency response and playback level are adjusted by an alignment tape.

Equipment: Audio Level Meter, Audio Signal Generator, Oscilloscope

Adjustment procedure:

1. Set the AUDIO SELECT switches to MANUAL position.
2. Set the menu number 306 to ON.
3. AUDIO INPUT CH-1/CH-2: 15 kHz, +4.0 dBu
4. Insert a blank tape(BCT-20MA) into the unit.
5. REC mode
6. Play back the recorded portion with the standard playback unit(DOLBY ON).

Oscilloscope: X-Y mode (lissajous waveform)

Test point: AUDIO OUT CH-1/CH-2(600 Ω load: Standard playback unit)

Specification: A(phase difference) = within 10°
When the specification is not satisfied, perform procedure 7 and later.

Note: 1 DIV. = about 10°

7. AUDIO INPUT CH-1/CH-2: 15 kHz, +4.0 dBu

8. Insert a blank tape(BCT-20MA) into the unit.

9. REC mode

Test point: CH-1: TP102/AU-185 Board

CH-2: TP202/AU-185 Board

Adjusting point: RV113/AU-185 Board

Specification: Correct the phase difference of procedure 6.
After the adjustment, check procedure 6 again.

Note: After the adjustment, be sure to set the menu number 306 to OFF and set the AUDIO SELECT switches to AUTO position.

[Preparation before Adjustment]

Cleaning of stationary heads

Clean stationary heads by the cleaning piece moistened with cleaning fluid.

After the fluid vaporizes, wipe off the heads by a not-weaved cloth or cleaning piece.

[Notes on Adjustment]

- Blank tape means a cassette tape on which no video/ audio signals are recorded.
- The alignment tape is used within the limits about 50 times and recommend to manage by marking.
- Standard playback unit should be the unit which audio head phase, playback frequency response, playback level adjustments.
And also adjusted with playback video phase, playback Y/C delay and playback C/C delay adjustments are performed.
- 0 dBu = 0.775 Vrms

11-1. PLL VCO ERROR VOLTAGE ADJUSTMENT

Equipment: Component Signal Generator, Oscilloscope

Preparation:

- Input signal: [for NTSC] 75% COLOR BARS
[for PAL] 100% COLOR BARS
- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Connection: CONNECTION 2

Test point: TP401/VO-46 Board

Trigger: TP400/VO-46 Board

Adjusting point: RV400/VO-46 Board

Specification: $A = 1.8 \pm 0.1$ V dc

11-2. Y INPUT LEVEL ADJUSTMENT

Equipment: Component Signal Generator, Oscilloscope

Preparation:

- Input signal: [for NTSC] 75% COLOR BARS
[for PAL] 100% COLOR BARS
- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Connection: CONNECTION 2

Test point: TP101/VO-46 Board

Trigger: TP400/VO-46 Board

VO-46 BOARD -A SIDE-

11. VIDEO ALIGNMENT

11-8. Y RF RECORDING CURRENT SYSTEM ADJUSTMENT

11-8-1. Y RF Recording Current System Adjustment (Using a Recording current adjustment tool EW-571)

1. Y Recording Current Frequency Response Adjustment

Equipment: Sweep Generator, Oscilloscope

Preparation:

- Remove the socket SP200 on the VO-46 board.
- Connect TP200 and E200 on the VO-46 board as shown in the following figure.

- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Test point: CH1; TP201(GND:E200)/VO-46 Board
CH2; TP702/VO-46 Board (TRIG)

Adjusting point:

- ① CV200 (CH-1 FREQ RESP)/VO-46 Board
- ② CV201 (CH-2 FREQ RESP)/VO-46 Board
- ③ CV202 (CH-3 FREQ RESP)/VO-46 Board
- ④ CV203 (CH-4 FREQ RESP)/VO-46 Board

Specification: [for NTSC] 2 MHz : 10 MHz = 100 % (reference) : 75^{+10}_{-8} %
[for PAL] 2 MHz : 10 MHz = 100 % (reference) : 95 ± 10 %

Note:

- After the adjustment, connect the socket SP200 to the original position.

2. Y Recording Current Adjustment

Equipment: Component Signal Generator, Oscilloscope
EW-783 (Camera tool)

Preparation:

- Input signal: 50 % FLAT FIELD
- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

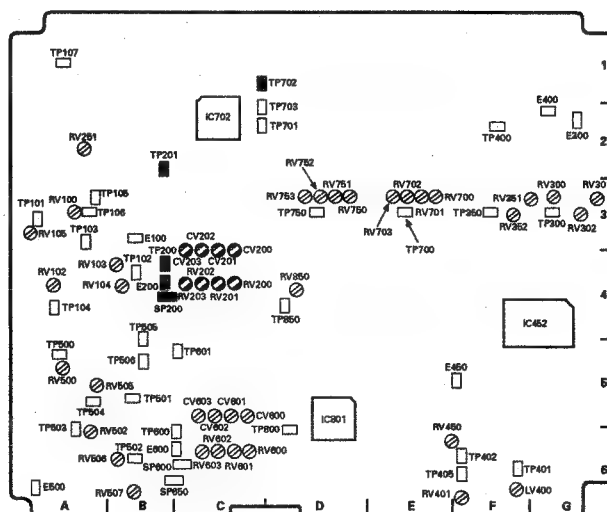

Connection: CONNECTION 2

Test point: CH1; TP201(GND:E200)/VO-46 Board
CH2; TP702/VO-46 Board (TRIG)

Adjusting point:

- ① RV200 (CH-1 RF Level)/VO-46 Board
- ② RV201 (CH-2 RF Level)/VO-46 Board
- ③ RV202 (CH-3 RF Level)/VO-46 Board
- ④ RV203 (CH-4 RF Level)/VO-46 Board

Specification: A = 1.50 ± 0.05 V p-p

PVV-3 (UC)
PVV-3P (EK)

3. Overall Y Recording Frequency Response Check

for NTSC

Equipment: Component Signal Generator,
EW-571(Recording Current Adjustment Tool),
EW-783(Camera Tool), Standard Playback
Unit, Waveform Monitor (WFM 300/300A)

Connection:

(REC mode)

- input signal: 60% MULTI BURST

Switch settings of EW-571:

THROUGH/SWITCH: SWITCH
Other switches: any position

(PB mode)

[STEP 1]

Preparation:

- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Switch heads ① through ④ in order, record to each head in 30 through 60 seconds.

[STEP 2]

1. Insert the tape with recorded at STEP 1 into the standard playback unit.
2. Play back the recorded portion with a standard playback unit. Measure the levels at the following frequencies. The reference level is at 0.5 MHz portion of 60 % MULTI BURST.
3. When the specification is not satisfied, perform 11-8-1. Y RF Recording Current System Adjustment items 1 through 2 within the specification again.

Overall Y Recording Frequency Response Check	Y RF Recording Current System Adjustment
measure low	more lower
measure high	more higher

Specification: Specification/CH-1 through CH-4

Frequency (MHz)	against measured value of alignment tape (dB)	(%)
0.5	0 dB (Reference)	100% (Reference)
1.0	± 0.4 dB	+4.7 % -4.5 %
2.0	± 0.4 dB	+4.7 % -4.5 %
3.0	± 0.4 dB	+4.7 % -4.5 %
4.1	± 1.0 dB	+12.2 % -10.9 %
4.5	+1.5 dB -2.0 dB	+18.9 % -20.6 %

Difference of among CH-1 through CH-4 should be within 0.4 dB at 4.1 MHz.

- Measure the levels at the center of moire.

for PAL

Equipment: Component Signal Generator, EW-571(Recording Current Adjustment Tool), EW-783(Camera Tool), Standard Playback Unit, Waveform Monitor (WFM300/300A)

Connection:

(REC mode)

- input signal: 60% MULTI BURST

Switch settings of EW-571:

THROUGH/SWITCH: SWITCH
Other switches: any position

(PB mode)

Standard playback unit

[STEP 1]

Preparation:

- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Switch heads ① through ④ in order, record to each head in 30 through 60 seconds.

[STEP 2]

1. Insert the tape with recorded at STEP 1 into the standard playback unit.
2. Play back the recorded portion with a standard playback unit. Measure the levels at the following frequencies. The reference level is at 2T BAR portion of 60 % MULTI BURST.
3. When the specification is not satisfied, perform 11-8-1. Y RF Recording Current System Adjustment items 1 through 2 within the specification again.

Overall Y Recording Frequency Response Check		Y RF Recording Current System Adjustment	
measure low	→	more lower	
measure high	→	more higher	

Specification: Specification/CH-1 through CH-4

Frequency (MHz)	against measured value of alignment tape	
	0 dB (Reference)	100 % (Reference)

Specification: $A = 0 \pm 5 \text{ ns}$

11-12. CTDM LEVEL ADJUSTMENT

Equipment: Component Signal Generator, Oscilloscope

Preparation:

- Input signal: [for NTSC] 75 % COLOR BARS
[for PAL] 100 % COLOR BARS
- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Connection: CONNECTION 2

Test point: TP501/VO-46 Board

Trigger: TP400/VO-46 Board

Adjusting point: RV500/VO-46 Board

Specification: [for NTSC] $A = 500 \pm 10 \text{ mV}$
[for PAL] $A = 667 \pm 10 \text{ mV}$

VO-46 BOARD -A SIDE-

11-13. C REF SYNC POSITION TENTATIVE ADJUSTMENT (After this adjustment, perform 11-24. Recording C/C Delay Adjustment.)

Equipment: Component Signal Generator, Oscilloscope

Preparation:

- Input signal: [for NTSC] 75 % COLOR BARS
[for PAL] 100 % COLOR BARS
- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Connection: CONNECTION 2

Test point: CH-1: TP101/VO-46 Board (Y)
CH-2: TP501/VO-46 Board (CTDM)

Trigger: TP400/VO-46 Board

Adjusting point: RV450/VO-46 Board

Specification: $A = 3.2 \pm 0.1 \mu s$

for NTSC

for PAL

VO-46 BOARD -A SIDE-

11-14. C NONLINEAR PRE-EMPHASIS MIX LEVEL ADJUSTMENT

Equipment: Component Signal Generator, Oscilloscope

Preparation:

- Input signal: PULSE & BAR (2,4 T)
- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Connection: CONNECTION 2

Test point: TP503/VO-46 Board

Trigger: TP400/VO-46 Board

Adjusting point: RV502/VO-46 Board

Specification: $A=75 \pm 5\text{mV}$

for NTSC

A2 2.05 V

20ms

10ms

for PAL

11-15. C REC HF ADJUSTMENT

Equipment: Component Signal Generator, Oscilloscope

Preparation:

- Input signal: 100% NALLOW LINE SWEEP
- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Connection: CONNECTION 2

Test point: TP504/VO-46 Board

Trigger: TP400/VO-46 Board

Adjusting point: RV505/VO-46 Board

Specification: [for NTSC] $A=60 \pm 5\text{mV}$

[for PAL] $A=100 \pm 5\text{mV}$

11-17. C RF RECORDING CURRENT SYSTEM ADJUSTMENT

11-17-1.C RF Recording Current System Adjustment (Using a Recording current adjustment tool EW-571)

1. C Recording Current Frequency Response Adjustment

Equipment: Sweep Generator, Oscilloscope

Preparation:

- Remove the socket SP600 on the VO-46 board.
- Connect TP600 and E600 on the VO-46 board as shown in the following figure.

- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Test point: CH1; TP601(GND:E600)/VO-46 Board
CH2; TP702/VO-46 Board (TRIG)

Adjusting point:

- ① RV600 (CH-1 FREQ RESP)/VO-46 Board
- ② RV601 (CH-2 FREQ RESP)/VO-46 Board
- ③ RV602 (CH-3 FREQ RESP)/VO-46 Board
- ④ RV603 (CH-4 FREQ RESP)/VO-46 Board

Specification: [for NTSC] 2 MHz : 10 MHz =
100 % (reference) : 65^{+10}_{-5} %
[for PAL] 2 MHz : 10 MHz =
100 % (reference) : 85 ± 10 %

Note:

- After the adjustment, connect the socket SP600 to the original position.

2. C Recording Current Adjustment

Equipment: Component Signal Generator, Oscilloscope
EW-783 (Camera tool)

Preparation:

- Input signal: 50 % FLAT FIELD
- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Connection: CONNECTION 2

Test point: CH1; TP601(GND:E600)/VO-46 Board
CH2; TP702/VO-46 Board (TRIG)

Adjusting point:

- ① RV600 (CH-1 RF Level)/VO-46 Board
- ② RV601 (CH-2 RF Level)/VO-46 Board
- ③ RV602 (CH-3 RF Level)/VO-46 Board
- ④ RV603 (CH-4 RF Level)/VO-46 Board

Specification: $A = 0.9 \pm 0.05$ V p-p

3. Overall C Recording Frequency Response Check

for NTSC

Equipment: Component Signal Generator, EW-571(Recording Current Adjustment Tool), EW-783(Camera Tool), Standard Playback Unit, Waveform Monitor(WFM300/300A)

Connection:

(REC mode)

• input signal: 60% MULTI BURST

[STEP 2]

1. Insert the tape with recorded at STEP 1 into the standard playback unit.
2. Play back the recorded portion with a standard playback unit. Measure the levels at the following frequencies. The reference level is at 0.2 MHz portion of 60 % MULTI BURST.
3. When the specification is not satisfied, perform 11-17-1. C RF Recording Current System Adjustment items 1 through 2 within the specification again.

Overall C Recording Frequency Response Check	C RF Recording Current System Adjustment
measure low	more lower
measure high	more higher

Switch settings of EW-571:

THROUGH/SWITCH: SWITCH
Other switches: any position

(PB mode)

Specification: Specification/CH-1 through CH-4

Frequency (MHz)	against measured value of alignment tape (dB)	(%)
0.2	0 dB (Reference)	100% (Reference)
0.5	± 0.4 dB	+4.7 % -4.5 %
1.0	± 0.4 dB	+4.7 % -4.5 %
1.5	± 1.5 dB	+18.9 % -15.9 %

[STEP 1]

Preparation:

- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Switch heads ① through ④ in order, record to each head in 30 through 60 seconds.

Difference of among CH-1 through CH-4 should be within 0.4 dB at 1.5 MHz.

- Measure the levels at the center of moire.

PVV-3 (UC)
PVV-3P (EK)

for PAL

Equipment: Component Signal Generator,
EW-571(Recording Current Adjustment Tool),
EW-783(Camera Tool), Standard Playback
Unit, Waveform Monitor(WFM300/300A)

Connection:

(REC mode)

- input signal: 60% MULTI BURST

Switch settings of EW-571:

THROUGH/SWITCH: SWITCH
Other switches: any position

(PB mode)

[STEP 1]

Preparation:

- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Switch heads ① through ④ in order, record to each head in 30 through 60 seconds.

[STEP 2]

1. Insert the tape with recorded at STEP 1 into the standard playback unit.
2. Play back the recorded portion with a standard playback unit. Measure the levels at the following frequencies. The reference level is at 8T BAR portion of 60 % MULTI BURST.
3. When the specification is not satisfied, perform 11-17-1. C RF Recording Current System Adjustment items 1 through 2 within the specification again.

Overall C Recording Frequency Response Check	C RF Recording Current System Adjustment
measure low	→ more lower
measure high	→ more higher

Specification: Specification/CH-1 through CH-4

Frequency (MHz)	against measured value of alignment tape (dB)	(%)
8T BAR	0 dB (Reference)	100% (Reference)
0.2	+0.4 -1.0 dB	+4.7 -10.9 %
0.5	+0.4 -1.0 dB	+4.7 -10.9 %
1.0	+0.4 -1.0 dB	+4.7 -10.9 %
1.5	+0.4 -1.5 dB	+4.7 -15.9 %
2.0	±1.5 dB	+18.9 -15.9 %

Difference of among CH-1 through CH-4 should be within 0.4 dB at 1.5 MHz.

- Measure the levels at the center of moire.

11-17-2. C RF Recording Current System Adjustment (Using a Waveform Monitor 1780R/1781R)

1. C Recording Current Frequency Response Adjustment

Equipment: Sweep Generator, Oscilloscope

Preparation:

- Remove the socket SP600 on the VO-46 board.
- Connect TP600 and E600 on the VO-46 board as shown in the following figure.

- Insert a blank tape (BCT-20MA) into the unit.
- REC mode

Test point: CH1; TP601(GND:E600)/VO-46 Board
CH2; TP702/VO-46 Board (TRIG)

Adjusting point:

- ① CV600 (CH-1 FREQ RESP)/VO-46 Board
